PATHÉSCOPE '200-B' PROJECTOR

With 200-watt lighting. Picture 10 ft. wide easily obtainable. Flickerless projection, sprocket-fed. Threading one side only. Single nut tilting device. Works off 110 volts. With lamp, plug, flex, adapter and one empty 300-ft. super reel **£15**

Nine monthly payments of **35/-**

LEICA III with F/2 SUMMAR LENS

The camera to overcome the fading light of autumn.

Gives exposures of 1, 1/2, and 1 sec., or any intermediate fraction, in addition to 1/20 to 1/500th sec. Automatic focusing. Measuring distance and focussing lens in a single action.

£33:13:0
Nine monthly payments of **78/6**

FOCOMAT ENLARGER

With automatic focussing. With effortless speed this enlarger will give perfect pictures from your Leica negatives, whether you want enlargements to the size of 3 1/2 x 2 1/2 in., or up to 12 x 10 in. The diffused illumination gives soft, harmonious enlargements and eliminates any possible scratches on the negative. Preeminently suitable for the enlargement of miniature negatives. For use with Leica camera lens

£13:19:0

Nine monthly payments of **32/7**

VOL. LXXVIII. No. 2392.

THE opening of the three big London photographic exhibitions last week marked the beginning of the autumn season. Each of the exhibitions is a notable one, and each fulfils its task in an eminently successful manner. The London Salon is frankly pictorial in intention and achievement, and this year's international show is one that no student of pictorial photography at its best should miss. The Royal is more diverse in its appeal, and pictorial photography is only one of its many sections. Practically every application of photography is demonstrated at the R.P.S., and some of the sections are of extraordinary interest. It is an exhibition of many attractions. The P.P.A. show is in two parts, the first of which is devoted to modern industrial photography, and the second to professional portraiture. The first part is now open and the specimens of commercial photography on view are magnificent examples of this phase of work. Everyone who is an admirer of fine technique will revel in this display. The London Salon is at the Galleries of the Royal Water Colour Society, 5a, Pall Mall East, S.W.1 (near Trafalgar Square). The R.P.S. Exhibition is at 35, Russell Square, W.C.1. Both of these are open daily until October 6th. The first half of the P.P.A. show is at Princes Galleries, Piccadilly, W.1, until September 15th. The second half will be opened at the same Galleries by the Lord Mayor on September 18th, and remain open until September 29th.

The First Photographic Exhibition.

At the first photographic exhibition, held in London at the Society

TOPICS of the Week

BEHIND THE GOAL POSTS.

The present is the ideal time for securing well-exposed high-speed football snapshots.

of Arts, in 1852, there were no fewer than 774 pictures on the walls. It is odd that the catalogue enumerated only 397, and it appears that the number of exhibits was almost doubled after the exhibition had been opened. The processes were Talbotype or calotype, waxed paper, albumen paper, albumenised glass, and collodion. It was an international exhibition—there were French and German as well as British contributions. One work shown—a photograph depicting ferns, grass and flowers—was dated 1840, and entitled "Le premier livre imprimé par le soleil." Even at this early date it was complained that many of the examples of architectural photography were marred by the intensities of the shadows, which completely hid the part of the work on which they fell. The Zoo made its appearance as a photographer's subject quite early; in the first exhibition there were twenty photographs of the animals in Regent's Park. The titles of many of the pictures were very much the same as now—"The Stable Door," "The Church Oak," "Scotch Firs," and so on. It was pointed out by critics that the value of the exhibition would be enhanced if illustrations of the various stages of the photographic process were shown side by side; in the whole collection there was only one example of a positive photograph being exhibited side by side with its negative. One critic also wrote that, considering how little was known at that time about the art, a small collection of materials and instruments would be highly welcome. Thus the trade exhibit had its origin with a non-commercial, or, in other words, a wholly educational object.

London's Statues.

London's statues are being removed one by one to places where they will be out of the way of traffic. The statue of Mr. Hogg, the founder of the Regent Street Polytechnic, was recently removed into the middle of Portland Place, where it is less in danger of being bowled over by a taxicab; and now they are tackling the memorial to Queen Victoria in High Street, Kensington, which is to be placed somewhere else. It would not be a bad idea to uproot all our London statues, engage a fleet of delivery vans, and move them about after the fashion of musical chairs. A city with perambulating statues would be full of new effects to astonish and impress the visitors. In the parlour game just mentioned, one player is eliminated at each stage, and if one statue were eliminated periodically we should be none the worse. A statue which ought in any circumstances to remain in its present position, the others revolving round

it, is that of Charles I, at Charing Cross, because that unhappy king on his horse appears in exactly the same position in the old prints of London, and amid the vast changes which have taken place in the neighbourhood of Whitehall and Trafalgar Square in two and a half centuries it does enable the student of architecture and history to work out the various sites.

Heady.

We see that Mr. Louis Golding, writing about the Western Highlands, compares the emotion which landscape induces in some people to that which is induced by wine. Certainly we can recall many landscape paintings and not a few photographs which suggested that something had gone to the head.

Super-realism.

Salvador Dali, the painter, and one of the great exponents of the group of Surréalistes, has been declaring, we see, that the moment

is now at hand for what he calls the systematisation of confusion and the total discrediting of the world of reality. The super-realist painter will paint objects with great care and likeness, but he will not bring into juxtaposition objects which are normally seen together. He will never bring into the same picture the saucer and the cup, the head and the hat. Everything will be cut off short, at the neck or at the wrist. On the other hand, the bringing together of unlike and unconnected things will express the super-realist ideal—such, for example, as “the unexpected meeting of a sewing machine and an umbrella on a dissecting table.” One can agree after this with the remark of a sympathetic critic of the movement—who laments that so many have misunderstood the philosophy of the Surréalistes—that “the art of Dali is not art, but a new form . . . of psycho-pathology”—in other words, a new mental disease. But some would say that all art is that.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

A “Water” Lens.

I have come across a somewhat vague reference to a lens in which water was used as a substitute for glass. It was apparently made by a Mr. Sutton, and great things were claimed for it. Is there any reliable information that would throw some light on the matter?

R. D. (Edmonton.)

Several experiments have been made from time to time in the direction of water-filled lenses. There is still in existence a condenser used by Daguerre, in which water was enclosed between two thin glasses (one convex and one plane) cemented together.

The lens about which you have read was invented in 1860 by Thomas Sutton, and we believe it was Messrs. Ross who made several of them. A section through the lens is shown in the diagram, which indicates that the outer shell was of flint glass, and of great thickness. The surfaces of the glass, being concentric, form a concave lens, the water in the spherical cavity acts as a convex lens.

In certain forms of construction the lens was achromatic. The outstanding feature of the lens was that it included an angle of 100 degrees, or even more.

To modify the uneven lighting what was called a butterfly stop was used, the opening being elliptical, with two thin plates like wings. Although this gave more even illumination than would otherwise have been the case the curvature of field was so great that curved plates had to be used, with focussing screen and dark slides similarly curved. This allowed only for curvature the long way of the plate, so that there was still marked distortion the short way of the plate.

If you can get a sight of a copy of the Royal Photographic Society's fine catalogue of the International Exhibition at the Crystal Palace in 1898, you will find the diagram reproduced on page 53. On the opposite page is a reproduction of a picture taken with the Sutton lens and camera, by James A. Sinclair. This shows the wide angle included, and the curvilinear distortion. A complete Sutton outfit is in the collection of the Royal Photographic Society, being the selection of exhibits on view at South Kensington Museum.

When Mr. T. R. Dallmeyer had succeeded in producing portrait lenses of the Petzval type, with a rapidity of $f/1$, Dr. Grün experimented with the introduction of a liquid element, and achieved an intensity of $f/1$. The aim here was not the inclusion of an abnormally wide angle, as with the Sutton lens, but an increase in rapidity.

A good deal of interest was aroused by examples of “instantaneous” portraiture indoors, and particularly by very good photographs of stage subjects by the ordinary theatre lighting. Considering the conditions in those days the results were extraordinary. Liquids other than water were tried, in order to secure a suitable refractive index. The trouble was that every increase in rapidity involved a decrease in depth of definition. Modern improvements in lens construction, the increased sensitivity of emulsions, and so on, have rendered these experiments with “water” lenses of historic and academic interest only.

AFTER *the* HOLIDAYS

The holiday accumulation of negatives is not always regarded as an unmixed blessing. Yet, as the following article shows, it is possible to save time and to obtain unusually good results by tackling the problem in the right way.

THERE are many satisfied workers who use their cameras all the year round; others—doubtless those in possession of the humblest equipment—restrict their activities to the summer months; whilst quite a few indulge in photography only as a holiday pastime.

In any case, it is tolerably certain that all classes have by now accumulated a fair stock of negatives, and the time is ripe to make plans for getting the very utmost out of them in the way of good results.

Sorting.

Nowadays, there is little need to tell even the young beginner that the print he receives from his D. & P. shop is hardly the best picture obtainable from his negative. There is such a thing as an enlargement; and although most establishments now use a "matched" grade of gaslight paper for every print they make, the most suitable process for every negative turned out on every roll of film is a matter worthy of consideration if the best results are wanted.

This is where all classes of photographers can carry their hobby well past the prescribed period, and even taste some of the pleasures of the perpetual pastime.

The first step in this direction, then, is to sort the negatives into two groups. In the first group are placed all the best negatives, the more commonplace forming the second group.

Subsequent procedure is the same for each group; but obviously the majority of workers will require to work completely through the first group of best negatives before making a start on the second.

Matching.

Each negative in the particular group referred to should be closely examined with a view to "matching" it, not only with a grade of paper but also—where necessary—

with an alternative printing process. This applies both to the making of contact prints and to enlargements.

As a general rule, "plucky" or contrasty negatives may be selected as being more suitable for one or other of the contact-printing processes, and also for enlarging through a condenser-less apparatus. On the other hand, negatives lacking in contrast will usually give of their best only through the medium of condenser enlarging or of contact printing on a vigorous grade of gaslight paper.

Individual Requirements.

Much, too, depends upon the individual requirements of the amateur himself. He may possess a certain contrasty negative (if it is not too small) which he does not desire to enlarge—even through a "diffusion" or condenser-less enlarger. Here he must make a selection from some of the many contact processes that may be regarded as suitable alternatives. Fortunately, there is some slight distinction between most of them; and it becomes possible to say that (of the more familiar processes) normal P.O.P. paper is as suitable as any for a negative of extreme contrasts. For the same negative, a soft grade of bromide paper would also give excellent results—as would certain of the lesser-known and more difficult processes.

Popular Grades.

Most work, however, will probably be done on the very popular grades of gaslight and (for enlarging) bromide papers. These in themselves cover a very wide range, and will be found to satisfy the requirements of most negatives made. Where they are obtainable in four different grades, i.e., "extra soft," "soft," "medium" and "contrasty," the papers should be reserved for negatives in the following respective order of matching: (1) hard or contrasty, (2) "pretty" or well defined, (3) normal or "not-too-

soft," (4) distinctly soft. By "soft" it is understood that the negative is lacking in contrasts, but is not necessarily thin or lacking in density. In fact, a very dense negative will often produce a very soft or flat print if it has been over-exposed and fully developed.

Other Notes.

So far as enlarging is concerned, it must not be forgotten that an increase of contrasts equivalent to approximately half of an entire paper range is secured when a condenser type of enlarger is substituted for a model using diffused light and no condenser.

It may also be observed that only slight mention has been made of other printing processes—such as carbon, etc. This is because such processes are usually dependent upon the possession of well-developed and unusually hard negatives.

It will be seen from the foregoing that the amateur who takes a real interest in his photographic work, and is anxious to make the most of his holiday negatives, apart from an album of snapshot record prints, has a pleasant task before him during the coming autumn and winter evenings.

Too Many Negatives.

The trouble in some cases—particularly when the holiday-maker has been an enthusiastic user of a modern miniature camera taking spools of thirty-six exposures—is that the large number of the negatives frightens even the keenest worker. Contact prints should, however, always be made at first, and from these a selection of subjects made for enlarging with a view to a further selection of pictures for exhibition purposes.

The necessity for making small enlargements from miniature negatives will become obvious if only portions are to be used for picture-making; these will not always be apparent in the contact prints.

The Royal Photographic Society

79th ANNUAL EXHIBITION

At 35, Russell Square, W.C.1.

First Notice.

AT the annual exhibition of the Royal Photographic Society, which opened on Saturday last, the 8th September, at the house of the Society at 35, Russell Square, London, W.C.1, most of the numerous applications of photography are again on view.

There are sections devoted to pictorial photography; natural history; scientific and technical examples of camera work; record, advertising and theatrical photography; photomicrography, aerial and astronomical and geological photography; and a collection of works exemplifying photography in colour.

The Pictorial Section.

Possibly the most interesting section, at any rate to readers of this journal, is the pictorial. This is to be seen in Rooms 1 and 2, and embraces some 257 prints, which have been sent from all over the world. Landscape, as is usual at the Royal, is in the ascendant, although there is a number of portraits and a sprinkling of still life. The male sex, as far as portraiture is concerned, seems to predominate, their number being stimulated by the award of twenty guineas offered by Pirie MacDonald for the best portrait of a man.

The successful print this year is No. 156, "Havelock Ellis," by Maurice Turney. It is a fine character study. The head, which is on a large scale, shows considerable strength and virility, and is a worthy successor to the winners of the two preceding years. "Lino in Mourning," by J. Ortiz Echague, and "The Perruquier," by W. Foster Brigham, were placed respectively second and third.

Another portrait of distinction is W. W. Weir's study of J. Dudley Johnston (35), and striking, also, is Pirie MacDonald's own work, "Rev. Merrall F. Clarke" (239); but the best work seems to lie in the landscapes, of which notable examples have been sent in by Alex. Keighley, James McKissack, J. Harold Leighton, H. A. Murch, J. Ainger Hall, Fred Judge, Admiral Stuart Nicholson, J. Sudek, Dr. Max Thorek, Paul Frapp, R. Chalmers and Tibor Hegyey; while notable work in the figure study and genre classes is contributed by J. Ortiz Echague, H. W. Lambert,

E. Chambré Hardman, Walden Hammond and many others.

An attractive panel of high-key work is shown between the two doors of Room 2, which lends a touch of brightness to a collection the general tone of which is inclined to sombreness.

The technical standard of all the exhibits is particularly high, and, pictorially, the collection is quite as good as any in recent years.

Natural History.

In the Natural History Section, in Room 3, on the second floor, many of the bird studies are extraordinarily interesting and attractive. The animal pictures, too, are very well done, and, in the botanical class, the medal of the Society has been awarded to Mr. Wm. C. Davies, of New Zealand (855-861).

Whipsnade, as was the case last year, proved a fruitful ground for subjects, the natural setting, if not precisely that in which the animals would be at home, offering an improvement over the usual background furnished by a Zoo.

Scientific and Technical.

Some of the applications of scientific and technical photography are shown in Room 4. Specimens of aerial and meteorological photography, photomicrography, radiography, geological, astronomical and record photography are shown, and a very large photograph (7×4 feet) of the moon, in the third quarter, occupies a deservedly prominent place (1030). It was taken at Mount Wilson observatory, and shows its subject as seen with a 100-inch telescope. The high-speed pictures will also attract attention, and the aerial view of New York, taken from a height of 26,000 ft., is marvellous in the amount of detail included.

Lantern Slides.

There is an excellent collection of lantern slides, very well shown, in the studio on the ground floor, many of these miniature pictures attaining a high artistic level. The colour transparencies are interesting, in view of the stage to which the various processes have been brought, but the colour rendering, possibly owing to the impracticability of any appreciable degree of modification, scarcely seems to accord with that of the painter

artist. Similar remarks are applicable to the colour prints in Room 1 on the screen.

New apparatus is on view in the trade section, and many of us will find much that is of interest, for, even if we think we are well equipped for anything we wish to undertake, there is always something that seems to offer an additional facility or convenience, or something to stimulate the acquisitive faculty.

The exhibition remains open till Saturday the 6th October, from 10 a.m. to 9 p.m. daily (Sundays excepted), except on Tuesdays and Fridays, when it will close at 6 p.m. Lectures have been arranged for those evenings.

The following lectures will be delivered during the Exhibition, at 7 p.m.:

Tuesday, September 11th.—"The Order of St. John of Jerusalem in the Past and Present." By H. W. Fincham.

Friday, September 14th.—"Yachting Scenes. Building, launch and trials of the yacht *Endeavour*, etc. 16-mm. films." By Harry Vandervell.

Tuesday, September 18th.—"In and Out of Bruges." By G. E. W. Herbert.

Friday, September 21st.—"Mary at the Zoo." By Eric Hosking.

Tuesday, September 25th.—"Pictures of Sicily. Natural Features, Scenery, Ancient Cities, Greek Temples, Roman Amphitheatres, Classical Associations, Religion, Legends and People." By Alexander Keighley.

Friday, September 28th.—"Switzerland from End to End." By F. S. Smythe.

Tuesday, October 2nd.—Exhibition Lantern Slide Night. The slides selected for the Exhibition will be shown on the screen.

Friday, October 5th.—"Lovely Lancashire, some of her old Halls and Ancient Handicrafts." By James Shaw.

Seats can be reserved in advance at a charge of 6d. All seats so reserved must be occupied by 6.55 p.m., when all unoccupied seats will be filled.

All who are resident in London, or who are able to run up to town, should make a point of visiting the exhibition, for, in whatever branch of photography we are engaged, there will be something to interest and instruct.

The Roll-Film Mirror Reflex for Everybody

Rolleicord

FOR EXPERT RESULTS IN AMATEUR HANDS

See what you get—that is the great advantage of the Rolleicord—the reflex mirror shows you your picture actual size, right way up. It enables you to compose and take your picture in an instant without fear of heads or feet being chopped off, as with ordinary cameras.

The Rolleicord is unique in its ability to capture unusual and speed subjects. Cheap to run, takes 12 pictures on $3\frac{1}{2} \times 2\frac{1}{2}$ 8-exposure roll film for 1/-. With Zeiss Triotar f/4.5 lens **£10 : 10 : 0**

See that your Rolleicord is supplied in the patented solid leather case which hangs from the camera while in use by two leather straps. After exposure the camera slips back into the case easily and quickly. Price £1. See the name "Rolleicord" stamped on it.

The London Salon of Photography

Now open at the Galleries of the Royal Society of Painters
in Water Colours, 5a, Pall Mall East, London, S.W.1.

FIRST NOTICE.

THE twenty-fifth annual exhibition of the London Salon of Photography was opened on Saturday last, the 8th September, at the Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1. Entries were received from almost every country in the world, and from a total considerably in excess of 4,000 some four hundred prints were selected.

A Source of Inspiration.

The ratio of acceptances to entries is therefore about ten per cent, and from this it may be inferred that the general level is exceptionally high. The work of selection was naturally both long and arduous, and those who were honoured by acceptance may well feel that something of note has been achieved.

Viewed as a collective show, the standard, according to the opinions expressed on the opening day, marked an appreciable advance over the years immediately preceding, and the prestige of the Salon, never higher than it is to-day, seems still further enhanced. It cannot fail to be a source of inspiration to all who are interested in pictorial photography, and, to the uninitiated, it will come as a revelation.

Practically every class of work and every variety of process is represented. Print quality, in itself, was never better, and it could scarcely be said that any single print failed to reach a high technical standard. The inimitable artistic standard which the Salon has set for itself is more than maintained, and its extraordinary variety makes the show most refreshing and intriguing.

It is interesting to note that the vogue for diffusion, so pronounced some five to ten years ago, has practically disappeared, most of the work being characterised by a clarity of definition that seems to indicate that a fumbling for effect by artificial means is a thing of the past.

Compositions, too, are marked with a greater measure of freedom, and do not seem to be restricted by a too slavish adherence to what is understood to be the conventional rules. Rather does it appear as though the phases of pattern and design, of geometrical form, and the arrangement of minutiae through which we have passed in recent years have crystallised into a more advanced and

less restricted idea of what the function of composition should be.

Methods of Treatment.

The fact is exemplified to some extent in the work of the members of the Salon, and particularly in the case with the work of Dr. E. G. Boon, whose highly original still-life studies betray a sense of placing and form that competes effectively with the work of the Japanese in a sphere that is regarded as peculiarly their own.

J. H. Anderson seems to prefer a more traditional form of arrangement, which, however, seems to suit the subjects he favours to perfection, and his photogravures, as usual, are notable for their richness of quality and beauty of tone. The studies of children by Marcus Adams are as captivating as ever, and, though his arrangements generally follow the accepted canons of composition, it would scarcely be possible to apply the modern touch without impairing the essential naturalism of his work.

More exciting, perhaps, are the eccentric impressions of Pierre Dubreuil, of Brussels, who always provides something in the nature of a photographic puzzle.

The small gum prints of J. Harold Leighton form a collection of most attractive pictures in miniature, while a contrast in size is furnished by the magnificent carbons of Alex. Keighley, the impressive seascapes and landscapes of F. J. Mortimer, and the bromoil transfers of C. J. Symes.

J. M. Whitehead, of Alva, is represented only by a single print of the type we have come to know and expect from him. It is a lovely landscape with a fine sky. Subjects of a similar type, with a like romantic content, are sent in by James McKissack, and their quality and richness of tone is remarkable.

Very pleasing, too, are the nudes of Bertram Park, while J. A. Lomax makes a welcome return, after an absence of a number of years, with some choice specimens of effects of sunshine and shadow.

Herbert Lambert's portraits show that he has lost none of his old-time skill and delicacy of touch. His work is as tender and dainty as ever, yet there is no lack of strength, but, on the contrary, all of his pictures are characterised by a full and rich range of tone, from blacks of luscious quality to

lights that sparkle with brilliance. He is one of the many exhibitors who, this year, are using the new Gevaluxe paper.

Daintiness is the outstanding feature of the bromoil transfers submitted by A. F. Kales, in marked contrast to the extraordinarily strong and powerful work by the Fresson process, contributed by the Spanish member of the Salon, J. Ortiz Echague.

Mrs. Barton, of Birmingham, W. Clutterbuck, of Norwich, L. Fleckenstein, of California, Leonard Misonne, of Belgium, C. H. L. Emanuel, of London, Harold Cazneau, of Sydney, Australia, F. Drtikol, of Prague, and Angus Basil, of London, are also represented, and, altogether, the work of the members not only maintains but enhances their reputations.

Notable Exhibitors.

Among outstanding work, apart from that by members of the Salon, there is a remarkable number of contributions that will compel attention. Notable are the figure studies of Rosalind Maingot. This worker has gone ahead amazingly during the past few years.

The landscapes of G. L. Hawkins are also on the grand scale, and are among the fine things of the show. F. R. G. Hedges has also work showing breadth of vision. E. Welinder, of Sweden, and O. Ecclesia, of Italy, both show some striking child studies. H. F. Kells, of Canada, Ismay Taylor, of Harrogate, John B. Eaton, of Melbourne, Yvonne Gregory, of London, M. Benkow, of Sweden, Marten F. Y. Coppens, of Holland, J. Pecs and R. Balogh, of Hungary, P. Cools, of Belgium, and a number of leading workers from America and Germany give distinction to a remarkable show.

Quite a just balance has been struck between the claims of portraiture and landscapes, and everyone who is interested in the pictorial side of photography will find examples that will appeal to them. The Salon is as strong in the one as in the other, and the selection committee are to be congratulated on having performed their heavy task efficiently and well.

The Salon remains open until Saturday, October 6th (Sundays excepted), from 10 a.m. to 6 p.m., and a study of the exhibits should be made by every reader of *The Amateur Photographer* who is able to visit the gallery during that period.

SKY-SCAPES

By MARJORIE LIVINGSTON.

Hill-top.

AMONG keen photographers there is a not uncommon complaint that good subjects for the average camera are apt to run short.

Yet for those who believe they have seen already all there is to be seen in their especial district of Mother Earth, there is still a wealth of subject-matter awaiting those who raise their eyes to the clouds.

There is no instrument so competent as the camera to increase our powers of observation. Although clouds have been the stand-by of the landscape painter since times immemorial, it is seldom that the budding photographer fully appreciates their beauty. More often than not they pass him by unnoticed, or they may even be regarded as a hindrance. Their presence interferes with those spark-

ling sunlight effects, so easy to achieve, or they flit across the sky and cast an unwanted shadow just when his carefully prepared apparatus was at the ready.

Once, however, the moment comes when the photographer is affected inevitably with the virus of experiment his powers of observation increase a thousandfold. The sky becomes a reality, and the clouds pictorial valuables. At first, they are photographed eagerly and at random, without notes of the sun's position, or of the time of day. The results are collected into a large file, and are used for printing into landscapes to enhance the pictorial effect.

By this method some excellent pictures are obtained. But such pictures are not uniformly excellent. The sky and the landscape must belong to the same hour of day, and both must have

Cumulus Mountains.

The cloud beyond.

been viewed from the same standpoint in relation to the sun's rays. Neither must they vie with one another for precedence in the finished print; the sky must be subservient to the landscape, or the landscape to the sky, if a harmonious composition is to be achieved. These considerations, together with the necessary skill in technique, make it a difficult matter to attain the perfection which was visualised at the outset.

A far more sincere and finer method of utilising the beauty of the clouds is becoming more and more popular at the present time. With a sympathy and patience which is reminiscent of the serious work of more leisured days, the photographer watches the face of Nature,

The Land and the Sky.

*By Edwin Broomer.
(From "The A.P." Competitions.)*

choosing first his landscape, and making his exposure at the moment when the elements have provided him with a natural pictorial display.

For this purpose walks and rambles without the camera may prove lucrative. The locality of a hill-top with unbroken views over the western sky may be noted for sunsets. A clump of twisted trees may be remembered as a suitable foreground for a stormy sky, or a group of

pinetrees to contrast with the blue-and-white effects of mid-summer.

The rest is easy. A glance through the window some day or other will show that Nature has provided a background. The foreground suitable to the completed picture is noted in the pocket-book. It is a simple matter to take the camera and make a bee-line for the particular locality, and the photographer will be the victim of more than average bad luck if he does not succeed in obtaining at least one successful negative.

The "Cumulus Mountains," taken from Chelsea Bridge, were sighted in Knightsbridge, and entailed a hurried and undignified journey on the part of the writer to secure the snap. "Good-bye to Day" was the reward of a similar race, uphill this time, and

A peaceful ending.

Good-bye to Day.

involving two friends to pose for the considered picture.

There is a sense of achievement in capturing these transitory effects, for each photograph is in its way unique. It represents something which was and is not, and which will never occur again, at least not without considerable variation.

Fortunately this kind of work is simplified for us nowadays by the availability of plates or films, and filters, to say nothing of fast lenses of fine quality; and care and patience will overcome all technical difficulties.

Handling the Foreground FIGURE

By M. L. HASELGROVE.

“THE all-seeing eye of the camera” is a very bad name for the lens, as those of us who habitually use one of short focal length will have discovered. For the eye is only too ready to be a good fellow and see what its owner wishes, while the lens is entirely non-partisan, and even emphasises those little things which we would rather overlook.

This often becomes a nuisance when we are using a model to give scale to a distant scene, but a little ingenuity will enable the operator to obtain the record he wants, despite the demon in the black box.

The two illustrations were taken in Cornwall, both with the same camera, and in each case the figure was deemed necessary to give the picture depth and life. That of Kynance Cove shows the model rather overpowering the huge rocks and the beach, for though the eye allowed for the distance and overlooked the

At Kynance Cove.

disparity in size, the camera recorded the scene with scientific exactness and no regard for my feelings. The second picture, taken at Land's End, found me prepared for the tricks of my instrument.

Standing well back from my model I removed the front half of my convertible lens, so making it of longer focus, racked out the front of my tripod-poised camera, and stopped well down to secure depth of focus. The result is a much more satisfactory picture with much better drawing.

The lesson proved a good one. My distant scenes are all to be taken where possible with a long-focus lens, or, better still, with the telephoto lens which is next on the list of possible purchases. When time and circumstances forbid even the luxury of a tripod, I shall still beat my instrument's mendacity by standing well back from my subject and relying on my enlarger and the fine grain of modern film to give the small image a chance to live.

It has to be remembered that the single eye of the camera “sees” and renders the subject finally on one plane, while the two eyes of the photographer see the different planes stereoscopically. If a stereoscopic photograph were being taken, an arrangement such as “At Kynance Cove” would be ideal for the purpose, but is very unsuitable for an ordinary print.

At Land's End.

Yachting Pictures

on the RIVER

By WILLIAM C.
ROWSELL.

THE country and town worker is generally inclined to ignore yacht photography, feeling that this subject is restricted to the seaside and holidays. Photographs of yachts on the river, however, are easy to take, and offer many pictorial possibilities. Yachting clubs are to be found on most rivers, and practice sails and races are frequently held. The London worker has the Thames at his disposal, and at places, such as Richmond, Marlow, Cookham and Henley, yachts are generally to be seen.

A tree-lined river bank gives a beautiful and natural background that greatly helps the composition of the picture. A dark-toned background shows up the white sails of the yachts to their best advantage, while the horizontal lines of the bank and skyline, opposing the vertical lines of the boats, add even greater strength to their position. A place should be chosen where the bank is fairly thickly wooded, otherwise the background will be distractingly "spotty" and defeat its own object.

Owing to the amount of reflected light from the water, very short exposures can be given with such a light-toned subject, and successful photographs are possible even under extremely dull conditions. I have found an exposure of $1/100$ th sec. sufficiently short for most shots unless at close quarters. If the boats are travelling towards or away from the camera a speed of $1/50$ th sec. or even $1/25$ th sec. will generally give sufficiently sharp results. The correct exposure is also governed, of course, by

the lighting conditions prevailing and the stop in use.

Any kind of plate or film can be used for this work, but in order to obtain the correct tone renderings of the sky, water and white sails, a panchromatic emulsion used in conjunction with a filter is essential. The extra exposure made necessary by the use of the filter is discounted by the increased light reflected from the water. A lens hood of the barrel type will prevent any of this reflected light from striking the lens and causing "flare."

One of the greatest advantages of river yachting to the photographer is that he can get close to the craft and obtain a good-sized image on the negative. When turning, the yacht has to come near to the river bank and close-up studies are possible. These

Close hauled.

Overtaking.

A good reach.

would be out of the question on the sea except from a following boat.

Pictures taken broadside on should be avoided, the best being obtained when the boats are tacking, or travelling away from or towards the camera.

The essence of this type of work, as with all action subjects, is to be continually on the *qui vive*.

The camera should be all ready in the hand, properly focussed, at the correct aperture, and with the shutter set for instant operation. Your eye should be glued to the viewfinder the whole time the yachts are in sight, so that immediately a well-composed arrangement of the subject is seen it can be recorded.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

VIEWPOINT DIFFICULTIES.

I AM using these three prints to illustrate a particular form of difficulty against which all photographers bump at times—the difficulty of finding a viewpoint that will do justice to the particular subject. St. Paul's Cathedral is about as familiar a building as can be imagined ; but, like most other cathedrals, it is so closely hemmed in

Fig. 1.

with other, buildings that it is impossible to get a view that shows off its points properly.

The stock view of St. Paul's is the west front as seen from Ludgate Hill, and even the most distant of the available viewpoints is so close that the dome sinks down behind the west turrets, and is made to look insignificant in comparison. Further, the dome is so foreshortened at close quarters that its beauty is lost. The lines and proportions of this part of the structure can only be appreciated from a distance, and many an artist has come to grief through drawing it from a standpoint much too close. Other artists have

Fig. 2.

failed to draw it correctly from any point ; but the camera does it for us easily and correctly in a fraction of a second.

Fig. 3 is a painful example of the sort of thing that literally stares us in the face when we are looking for a good viewpoint. The buildings in the foreground are bad enough, but even if they were swept away there is an inner barrier of buildings around the cathedral, of which nothing can be seen lower than the supporting columns of the dome.

Bad as the near buildings are, the advertisement makes one of them worse. Till recently there was another advertisement here, which, although less obtrusive, was powerful enough to render this view hopeless. In the original print

Fig. 3.

September 12th, 1934

the hanging ladder can be distinctly seen, with two men on it and another at the top, and from their size it is clear that the letters are nearly twenty feet high. What are we to do with town subjects when we are yelled at by twenty-foot letters? I was asked whether this particular inscription referred to a new brand of suet; and I think that my answer, "Possibly," was a commendably mild one in the circumstances.

Fig. 1 is the familiar view of the dome from Bank Side. It is by no means a view of the cathedral, which is here completely hidden by a screen of warehouses. This view is generally used as a characteristic background for barges, or something of the sort, in the foreground. Even here it would have been better for some such note, but there was nothing available during the brief time I could spare, so I transferred some of the interest to the sky.

In Fig. 2 the sky was the real subject. I used the dome as a dominant detail in a bit of a city skyline. Even when making a cloud negative it is advisable to show something terrestrial, so as to get an idea of the height of the clouds, and where they ought to be in the case of combination printing.

Talking about clouds, there are many photographers who bemoan their inability to get them so that they will print out with the rest of the negative. The three prints shown

were taken within a very short period, and I was after the clouds in two of them. The exception was Fig. 3, in which only the lower part of the sky is shown. If no more were included in Fig. 2, there would be no clouds to notice. Further, Fig. 3 was taken without the yellow filter which was used for the other two, and it had more exposure for the sake of the near houses. There are no near objects in Figs. 1 and 2, and the exposure could be cut down accordingly.

I took care not to over-develop those with the clouds, but there is all the detail I wanted elsewhere. Each is the first print from the negative, without dodging of any kind. It happened that for these negatives I was testing the new Burroughs Wellcome fine-grain developer tabloids; not that I was worrying about grain, but if any developer is specially good for miniature negatives it ought to be specially good for larger ones. At any rate, I found it a nice, clean, easy developer, and the negatives are all right, even for a first test. I am sure I could get splendid negatives with this developer; and I say the same for Rytol, and ever so many others. But I never examine my negatives under a high-power microscope. I value peace of mind.

This has taken me some distance from viewpoints, but I dare say I shall find my way back to them.

W. L. F. W.

OUTDOOR PORTRAITS

Some hints on Lighting and Backgrounds.

By R. S. JACKSON.

AN outdoor portrait has a charm all its own, and no wonder, for one can place the "sitter" in so many different positions to obtain just that type of lighting which best suits the subject, or the taste. Top-lighting, side-lighting, against-the-light effects; all these can be obtained at will outdoors, without having to resort to fancy gadgets, spot-lights, and so on.

A wall as background.

Outdoor light is very intense, much more so than ordinary artificial light; and this makes it possible to give fast exposures, which in turn make for better results, for the faster the exposure the better is the chance of success, especially in the portraiture of children. Also, sitters seem to be far less self-conscious outdoors, and one finds less tendency towards studio stare and stiff-neck poses, which are sometimes troublesome in home portraiture.

After making experiments with all sorts of lighting systems the writer has obtained some cane rods, white muslin and two or three white boards. With these simple materials it is possible to rig up a rough outdoor studio in a few minutes. Whilst not really necessary, the rods covered with the muslin suggest privacy to the sitter, and also help to control the light—a most important matter.

The sun is sometimes an unwelcome guest. His light is valuable, but his direct rays may spoil the expressions of the subjects.

During the midday hours, 1/60th of a second at f/8 with a medium speed film or plate gives a good negative, strong enough for chlorobromide printing, yet rich enough in gradation for enlargements.

As for backgrounds, they are ready

at hand in the open spaces. A piece of trellis kept right out of focus makes a background which has to be seen to be appreciated. A pebble-dashed wall or house-end, or even an ivy-covered wall—both kept well out of focus, of course—make backgrounds worthy of any portrait. Even seaside snaps, if carefully posed so that the sands form the background, can be made into real portraits.

The sands as background.

How I make my EXHIBITION PICTURES

No.
CCXLVI.

Mr.
T. L. J.
BENTLEY.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"PHOTOGRAPHY meant nothing to me until a day came, early in 1920, when a friend who had been one of my companions on a cycle tour presented me with a P.O.P. Brownie picture showing the three of us—somewhat disreputable and not very pictorial cyclists—posed against the background of a Warwickshire highway. In that moment my interest in photography was born; if a camera would give such vivid records of personal experiences as that, then a camera I must have.

"Photography for me thus took its origin as an adjunct to cycle touring; and, since road travel has always remained one of my main interests, the incentive to photography has been predominantly the desire to make permanent records of the beautiful and the interesting scenes met with on the road. While still in my novitiate, however, photography began to prove itself quite a major component in the combination of interests, for it was photography that

first made possible more ambitious ideas of travel. The opportunity for a cycle tour in Central Europe suddenly came; but in those student days money was a problem, and the only way was to borrow, gambling on the chance of recovering expenses with illustrated articles afterwards. The gamble, fortunately, came off without the least difficulty, and thus wedded my photographic and travel interests indissolubly.

"In so far as my work is pictorial it is because it follows the principle so often laid down by Ward Muir in his 'Bandit' days; if you would make a beautiful photograph you must find a beautiful fact, and set your camera down in front of it. Personally, having been made without the artistic ego which yearns for self-expression—or else being unable to believe that such self-expression could be of any possible interest—I am content if I can obtain a photographic representation which recalls to me one of the 'high-lights' of my travel-

ling experiences, and at the same time, thanks to some effect of lighting, atmosphere, or composition, capable maybe of giving pleasure to others.

"My photographic work has therefore run almost exclusively along the lines of pictorial landscape or pure record work, by straightforward technique, governed by the desire to obtain always the matchless perfection of tone rendering which the photographic medium permits, and to render the subject as beautifully as photography will give it.

"As regards means, I may use for pictorial purposes any one of half a dozen instruments, including a quarter-plate reflex, with a battery of interchangeable lenses, a favourite much-worn Cameo, a $3\frac{1}{4} \times 2\frac{1}{4}$ roll-film Sibyl, and a Leica. Each pattern has its own appeal and its particular usefulness, so that, on motoring occasions, when the question of transport involves no problems, we go prepared for all emergencies and take the lot. On one famous weekend, with a like-minded companion, any bandit who might have chanced to decamp with our Austin Seven would have enriched himself beyond his wildest hopes with sixteen cameras!

"At one time I used panchromatic plates whenever possible; but the greatly improved highly orthochromatic roll films introduced within recent years, and, more particularly, the new fine-grain panchromatic roll films, have removed the grounds for this preference. My exposures are invariably developed by time, usually in a tank, with Azol for large negatives, and the Kodak Borax-M.Q. developer for small negatives. Negatives made for pictorial purposes are printed by projection, on Kodak Royal bromide for preference, with no more special treatment than composing in the enlarger, and giving local shading if needed. For the sake of the cloud effects on which the charm of a landscape to me so much depends, my exposures are almost invariably made through a light or medium filter, and are developed to moderate contrast only, to retain easy printing quality in the skies.

"Like so many other contributors to this series I must pay a tribute to the value of the assistance and criticisms obtained in club membership."

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

IN a world where the march of progress is signified by an outbreak of unlovely structures of brick with roofs of slate, or ramshackle buildings covered with corrugated iron, it is refreshing to see such survivals from the past as are shown on the opposite page, where the dignity of whitewashed walls and the picturesque quality arising from thatched roofs have been depicted.

Country Cottages.

These cottages in the country make very attractive subjects, particularly to the dweller in a town where, too often, beauty is sacrificed to utility.

It may be true that pictures are to be found everywhere; but, if any one of us were offered the choice, it is doubtful if we would prefer to attempt to make a picture of a row of workmen's cottages in a town to dealing with thatched houses in the country.

For one thing, the former seldom seem to lend themselves to treatment, and, even in the most favourable circumstances, it would take a master hand to make anything of them; whereas, in the case of cottages in the country, their nature, design and structure, to say nothing of the way in which they seem to fit in with their settings, invite the artist to reproduce their attraction.

It is, however, wise to try and avoid any suggestion of an urban character. In these days of macadamised roads, telegraph poles, electric pylons, and the like, it is not too easy to retain the essentially country nature of such cottages as we have in mind. The iron railings in No. 1, "Thatch," by J. Knight, offer an instance of the sort of thing that should be avoided, for, while the cottage seems all that could be desired, and the light upon its gable conveys a pleasant feeling of sunlight, those railings hint of the town and are not altogether in keeping.

Incongruous Elements.

They present an aspect of incongruity that it would be as well to exclude, and, possibly, seen from another angle they would not seem quite so obtrusive.

The fence in No. 5, "Rural England," by F. Wastcott, is more appropriate both in its irregularity

and in the fact that it is made of pieces of wood of indeterminate shape. It does not seem out of keeping with the cottage around which it is set, but at the right-hand side there is a telegraph pole, which is even more assertive than the railings in No. 1, and it is difficult to understand why it has been retained.

Fortunately, it does not come at a vital spot, and it can be removed simply by trimming a bare quarter of an inch from the right-hand side—an expedient that is obviously desirable. A little more foreground, if any is included in the negative, would be helpful, but in other respects the subject is very well chosen.

The sunlight, perhaps, is not quite so forcefully expressed as in the former print, but the sky has pleasingly soft gradations, and the composition, after the removal of the pole, is better, because it does not suggest a feeling of restriction as does the other.

Choice of Viewpoint.

However, it often happens that in dealing with this sort of subject the viewpoints are limited, and it is not always feasible to get far enough away from the subject to give it an adequate setting.

Something may be done, perhaps, if a choice of lenses is available, but such does not form part of everyone's equipment, and the use of a lens of extremely short focus often gives an apparent falsity of perspective that is artistically displeasing. In No. 2, "Tumbledown," by L. C. Harris, a greater space for a setting would not be undesirable, and a bit more foreground seems to be demanded. A more distant viewpoint, if available, would provide a better spacing, and, as far as can be seen, no element of incongruity mars the subject.

There is, again, something of a sense of restriction in the way the surroundings are limited in the case of No. 4, "Cottage at Selworthy," by Stanley S. J. Mills, which, otherwise, is almost exemplary in its choice of both material and viewpoint. The building seems to nestle into its setting as if it had grown there, and, this being so, each helps to display the other. The sunlight, too, lends

the beneficence of its beauty, but the lack of a sufficient foreground is felt, and, if a more distant viewpoint were available, it really ought to have been selected instead.

Adequacy of Setting.

No. 3, "Selworthy," by W. J. Mitchenhall, is in the same neighbourhood, and it would not be surprising to find that the second cottage formed the subject material of No. 4; but, if so, the data so afforded are not sufficient to enable it to be said that a better viewpoint was possible in that case.

The foreground is better judged in No. 3, but against this advantage has to be set the fact that less of the cottage front is shown. That, most people will agree, should be an essential element, and, taking everything into consideration, there is little to choose between the two efforts.

A measure of discernment has been exercised in both cases, for, while No. 3 seems to demand a vertical picture, the arrangement of the cottage and the way it is seen in No. 4 necessitates the choice of a horizontal shape; and, but for the lack of foreground in the latter, there does not seem to be any but the slightest of reasons for criticising the arrangement of the composition.

Excess of Foreground.

In comparison, No. 6, "Thatch Cottages, Basingstoke," by A. J. Hall, suffers from an excess of what can only be described as a most uninteresting foreground.

Its blank vacuity quite spoils any attraction that might otherwise be shown by the cottage which is intended to form the centre of attraction. Little could be done with such an unamenable stretch of roadway under the existing lighting, but it is possible that, when the sun is lower, its assertiveness of tone would be appreciably diminished, and an expedient that is sometimes useful in such cases is the adoption of a very low viewpoint. This, if the rising front is brought into action as well, has the effect of constricting the foreground and diminishing its width, and, at the same time, endows the nearer vertical planes with an added impressiveness.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"A HALT BY THE WAY," by E. Coast.

NOT the least of the attractions of a walking tour are the intervals of resting in secluded spots, such as is portrayed in this picture, and in the recording of such intervals the utility of a camera as part of the outfit is unquestionable. Efforts so obtained may be more inclined to the topographical than the pictorial, though this need not be the case; and, as in this instance, it is often possible to enlist the assistance of a companion as a model in working out an artistic theme.

Landscapes and Figures.

The pool, with its sunlit rocks and their reflections, makes a not unpleasing study, but one which, of its nature, does not exercise more than a momentary attraction in itself and without the figure.

It is possible that, in the immediate vicinity, something might be found that would be capable of standing alone and of attaining sufficient interest to make a picture, but it would need careful handling and treatment, as well as the inclusion of a feature of sufficient significance to create a definite and unquestionable centre of interest.

In its absence, the rocks and water could do no more than provide a setting which almost demands a figure to make it complete. That the fact has been appreciated and provision made to meet the need is shown by the inclusion of the figure (1) in this case. The figure is essential to the theme, and not only does she provide the centre of interest, but her presence vitalises the surroundings and also emphasises the value of the effect of sunshine.

From the compositional standpoint, her figure is strongly placed; the human interest she excites places her predominance beyond all doubt; and her pose is graceful and pleasing. She exerts a pull greater than any other single element, and, on these grounds, she may be regarded as the keystone of the whole thing.

Theme and Effect.

Her pose, taken in conjunction with her dress and accoutrements, suggests an interval of rest after a journey in sylvan surroundings, a suggestion which forms the theme.

To this theme is accorded the beautifying effect of sunshine, which, by bestowing its influence upon her, be-

There is the possibility that, at another time of day, a figure placed in the same position would be in full sunlight, and the rocks would either be in shadow or not quite so brilliantly illumined; but on a walking tour it is often impossible to choose a time when conditions are altogether favourable, and a subject has to be taken as and when the opportunity offers. Assuming this to be the case, a valid excuse is provided, but in an ideal rendering the relative values should be as described.

Even now, it would be possible to effect some adjustment in the required direction by local control or the employment of one of the control processes. The various lights, excepting those on the figure itself, should be subdued, due regard being paid to their placing and the requirements of naturalism. Provided care be taken not to introduce any sense of falsity; to avoid any difference in texture; and to prevent the retouching from becoming apparent, the representation would benefit very considerably.

The End and the Means.

The end would justify the means, and though control for the sake of control is not advocated, its employment is warranted where either a picture is made out of nothing or a subject that is good is made better still.

Another defect, which does not happen to be very noticeable in this particular case, is a slight departure from the level. It is principally to be seen in the lack of truth in the vertical alignment of the reflections with the objects they repeat. However, the fault can readily be corrected by trimming, and no doubt will be if another print be made.

Nevertheless, and despite these criticisms, the choice of the subject shows an eye for a picture, and a not inconsiderable promise, while at the same time it exemplifies the part that photography can play during a walking tour.

"MENTOR."

comes a secondary motive, and it is the conjunction of the human interest of the theme and the attraction of the effect that bestows a pictorial appeal.

So far so good, but if it could have been said that the sunlight, at its brightest, took effect upon the figure, the appeal would have been appreciably increased; but, unfortunately, brightnesses of equal if not greater intensity are to be found elsewhere in the setting. They may not be sufficiently insistent to upset the principality of the figure, but, none the less, they are inclined to be disturbing.

THE MINIATURE POSTAL CLUB.

SIR,—May I ask space to write in reference to the reader's query, answered in "The A.P. & C." for August 29th under the title "Postal Clubs"?

I would mention that the Photographic Miniature Postal Portfolio is *always* open to membership. Following upon the suggestions made by Geo. A. Slight in his letter for June 28th, 1933, this postal club expands in circles. Each circle has an Assistant Secretary and Committee. It is not necessary for the P.M.C.C. to have a waiting list in the general sense, unless, of course, the number of would-be members is too small to support a new circle.

On the other hand, *and this is important*, there are no hard and fast, unbreakable rules about the numbers necessary before a new circle can be set going. It is really up to the new members.

On that note of independence the success of the circles is largely due. It is very true that a postal club is just what the members make of it. Invaluable to everyone, of course, is the constant interchange between circles of notebooks and prints of the month. Also of lectures, which have been one of the most important features of the club for some time. Lately, the effects of hard and soft waters from various sources, and differing contrast ranges in printing papers, developers. Quite a few of our members are well-known workers.

Any new circle can draw upon—indeed, when necessary, is expected to draw upon—the accumulated and accumulating knowledge and experience of all this.

All letters of enquiry should be addressed to Geo. A. Slight, Hon. General Secretary, 18, Ewelme Rd., Forest Hill, London, S.E.23.

Thanking you, and for the space you have already given to the club.—Yours, etc., C. S. GRANT.

SIR,—Remembering Mr. Rae Griffin, and the birth of the Miniature Postal Club, I beg leave to attempt to do something similar.

I have been feeling for some time that a postal club—on the lines of the Miniature Postal Club—would be a tremendous boon to South African enthusiasts. This is a large country, and there must be many enthusiastic amateurs who live too far from the town photographic club—if indeed there exists one—to join up. To such I appeal now. I would be pleased if any South African amateur, reading this note of mine, would drop me a line with the object of forming such a club. Thanking you.—Yours, etc., EDWIN H. KEW,

("Reinbron," Cradock, C.P., S. Africa.)

WATERLOO BRIDGE.

SIR,—As the demolition of Rennie's exquisite arches proceeds, an abundance of opportunity is provided for pictorial and record photographers to obtain fine studies of permanent value.

A number of artists in older mediums are already engaged in making their versions of the event, and it is to be desired that the camera will not be allowed to neglect its full and proper share.—Yours, etc., G. NINEHAM.

GLAZING PRINTS.

SIR,—It seems that many of your readers are "stuck" when it comes to removing their hoped-for glossy prints from the ferrotype tins. Why? Because the prints are stuck, and how!

Here is the answer to their prayers.

Fix prints in an acid hypo bath and wash as usual. Then remove from wash water and swab the face of the prints with dilute acetic acid—one part of glacial acetic acid to about 25 parts of water—also swab off the ferrotype plate with the same mixture and rub dry with a wad of absorbent cotton, or, as you in England say, "a pledget of cotton-wool." Squidgee (squeegee) the print to the tin and let dry thoroughly, then pick it up, because it has fallen from the tin with no cursing on the photographer's part. Now examine the print in a

weak light, because to do this in direct sunlight would result in temporary or permanent blindness. What gloss!

Let the chemists tell you about the permanency of prints treated in this manner. I've had some, so treated, for seven years, and they show no ill effects.—Yours, etc.,

RALPH REX.

(4133, Sacramento Ave., St. Louis, Mo., U.S.A.)

PLAGIARISM.

SIR,—It would appear from the picture of Mr. Kilbourn's, entitled "To-morrow will be Friday," reproduced in the current issue of your periodical, that a deliberate attempt has been made to reproduce the old master "Thursday" in the form of a photograph. Whilst admitting that one can obtain inspiration from the study of the methods of old masters I feel I must voice a protest against deliberate copying of their methods.

My own opinion is that surely the two chief items to consider in successful pictorial photography are, firstly, composition and, secondly, tone value. I consider it far easier to obtain perfect tone value, gradation, etc., from a sheet of bromide paper than to obtain perfect composition thereon. The solution which Mr. Kilbourn appears to have adopted for getting over the difficulties associated with obtaining good composition—i.e., by copying that of an acknowledged master—is without doubt a very easy one, but I cannot bring myself to believe it a fair one, or one that I should care to see universally adopted.

In view of this I should be extremely interested to hear the opinions of some of your readers as to where "cribbing" starts and where it stops in pictorial photography.

May I take this opportunity of congratulating you on your excellent periodical and wish it the very best of luck?—Yours, etc., F. PARKIN.

A PRINTER'S ERROR.

SIR,—I am afraid that by interposing a full-point your printer makes me appear to be taking outrageous liberties with high-speed emulsions, according to my letter published on August 15th, where I am made to state "exposures . . . were of the order of 1/100th second at f/11 . . . although actually about a quarter second at f/3.2, with a medium filter was given." "F/thirty-two" should be read instead of the soup-plate aperture mentioned in print.—Yours, etc.,

R. E. S. WHITE.

PROOFS FROM WET NEGATIVES.

SIR,—Having noticed in this week's "A.P." an article on making proofs from wet negatives by H. Barker-Bland, may I suggest what seems to my mind a much simpler method.

Personally, I wet the sensitised paper with water and stick it on to the back of the negative and press flat. The paper adheres to the negative as in a printing-frame, and the print is made in the usual manner. This method, as you see, needs no extra apparatus, and is quite satisfactory.—Yours, etc.,

W. E. RUBY.

THE PERFECT CAMERA.

SIR,—The comments and suggestions of your correspondent Oliver Rustic, and his reference to "an excellent cause" are well timed, and will no doubt be read with considerable interest.

It is appalling that where modern "miniature" cameras are concerned, two models only, i.e., the Dallmeyer Pocket Dual, and the N. & G. Vest Pocket Sibyl, exist at present—worthy to rank as first-class British-made products. One cannot help thinking that the strenuous, but unseemly, concentration during recent years on what is known as "the photo-finishing films-cum-free gift coupon cameras-cum-more films and photo-finishing ramp," involving sheer neglect of numerous highly important matters, must have offered marvellous opportunities for enterprising foreign firms to jump in and capture the best part of the world's high-class photographic apparatus manufacturing business.—Yours, etc.,

BERT HEPBURN.

The P.P.A. Exhibitions

At the Princes Galleries, Piccadilly, W.I.

AGAIN this year the members of the Professional Photographers' Association have divided their annual show. They have realised, and wisely, that modern portraiture with the camera is becoming a very individual thing that calls for personal treatment and presentation. It is, in many instances, a pictorial problem in which the sitter and the artist collaborate. For this reason the production of purely commercial work—admittedly calling for a high degree of technical skill—is in another category, although both are the output of professional craftsmen with the camera.

The first half of the P.P.A. annual exhibition, which opened on September 5th at Princes Galleries, Piccadilly, W.I., is devoted entirely to modern industrial photography, and very fine stuff it is.

Most of the prints are on a big scale, generous and bold in treatment, and the technical excellence of some of them is staggering. It really shows what photography can do when it tries, or rather what the photographer can do when he knows how.

Here, in the most casual manner, as part of a firm's exhibit—all in the day's work, apparently—are subjects for commercial purposes that would hold their own in any show of the most up-to-date pictorial photography. It is perhaps because commercial and

industrial photography is up-to-date that this impression is created.

It shows at least that here is a notable force to be reckoned with in all future advertising campaigns, in which pictorial and graphic representations are made.

Technical excellence is outstanding, and this is a tribute not only to British photographers, but also to the improvements made in recent years in plates, films and papers. It is also apparent that the style of many photographic firms is becoming strongly individualised, so that their work bears a definite hall-mark of personal quality.

Variety of subject combined with a high standard of quality makes this an easy exhibition to look at. It is of as much interest to the general public as to the architect or advertiser, engineer or fashion expert. Screws given the majesty of forest trees, crystallised fruits which look too real for comfort, a single motor coach multiplied into a long vista of shining cars, rings making patterns with the sun, furs coming to life, and shimmering frocks perfectly worn, Vesuvius smoking and Edinburgh flood-lit, heads many times larger than life, and details as delicate as nature can make them; such is the variety of treatment industrial photography can command.

In a display so good it would be invidious to single out particular examples, but it is worthy of note that all the exhibitors are British, and many of them are names well known as portraitists of high rank, and some as successful "pictorial" photographers. As an outlet for pictorialism, combined with high technique, industrial photography has come to stay.

Apart from the numerous applications to a great variety of commodities, as illustrations of their excellence and utility, this exhibition demonstrates the value of the photograph for poster work.

Seven photographic posters ten feet high are on view, and apart from their advertising appeal, the technical quality is astonishing. They indicate the perfection of the comparatively small negatives from which these big enlargements were made.

Another exhibit draws attention to the use of landscape in poster display, a form of photographic advertising used extensively by continental railways but still new to this country.

There are over 400 pictures in the exhibition, and it closes on September 15th. The second half of the P.P.A. exhibition, devoted to portraiture, will be opened in the same gallery on September 18th.

The Week's Meetings

Wednesday, September 12th.

Camberwell C.C. Syllabus Night.
Rochdale P.S. Surprise Items. J. Hargreaves and H. Gidman.
Southampton C.C. Outing to Ashurst.
S. Suburban and C.P.S. Ciné Evening. L. C. Boyce and G. H. Dannatt.
Stockport P.S. Competition.

Thursday, September 13th.

Hammersmith H.H.P.S. On things in General—Illustrated. J. Staples.
Isle of Wight C.C. Social Evening.
Medway A.P.A. Cottage Meeting. "The Perfect Print," concluded.
N. Middlesex P.S. Carbro. F. J. Halifax.
Oldham P.S. One-Man Show. President.

Friday, September 14th.

Leytonstone and Wanstead C.C. Club's Portfolios.

Saturday, September 15th.

Bath P.S. Limpley Stoke.
Beckenham P.S. Shoreham. Leader: F. H. Elliott.
Bristol P.S. Blaise Castle. Tram: 3.0 Centre.
Bromley C.C. Royal Photographic Exhibition.
Cripplegate P.S. St. James's Park. Meet Admiralty Arch, 1.45 p.m.
Hanley P.S. Wetley Rocks and Cheddleton. Crown Bank, Hanley, 2.30.
Hucknall and D.P.S. Newtown Linford.
Leytonstone and Wanstead C.C. Kew or Hampton Court.
Nottingham and Notts P.S. Closing Day of Midland Salon.
Oldham P.S. Wilmslow and District. Leader: R. Cottam.
Partick C.C. Eaglesham. Leaders: Messrs. Park and M'Vean.
Scarborough and D.P.C. Whitby.

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Saturday, September 15th (contd.).

Sheffield P.S. Bamford for Thornhill and Hope.
Singer C.C. Strathaven (G.D.U.).
S. Glasgow C.C. Gleniffer Braes.
S. Suburban and C.P.S. City Outing and Red Book Night.
Stockport P.S. Styal. Leader: J. L. Taylor.

Sunday, September 16th.

N. Middlesex P.S. Outing to Marlow. Leader: W. G. Gould.
Stafford P.S. Coppensham v. Bradley.
Hammersmith H.H.P.S. Oxshott and Bookham. Leader: F. Bowen Williams.

Monday, September 17th.

Bournemouth C.C. Demonstration.
Southampton C.C. Amateur Portraiture Evening.
Walthamstow and D.P.S. Ciné Demonstration. Miss E. A. Miller.

Tuesday, September 18th.

Hackney P.S. At Home and Away. T. D. Nunn.
Manchester A.P.S. Lecture Evening.
Nelson C.C. Print Criticism Evening.
Twickenham P.S. Whist Drive.
Leicester and L.P.S. Talk on Members' Prints.

Wednesday, September 19th.

Camberwell C.C. Table-top Photography. C. Howard.
Hucknall and D.P.S. Newtown Linford.
Partick C.C. Receiving date for Prints for Criticism.
Rochdale P.S. "Pictures I have Made this Year." J. C. Wild.

Amateur Cinematography

Editing Your Summer Films By F. R. UNDY.

AT this time of the year ciné camera owners have generally amassed quite a miscellaneous collection of films, the fruits of holidays and various other outdoor activities. The sorting out of these, the removal of unnecessary portions, and the blending of the various shots into interesting complete films ready for projection, provides a really fascinating occupation.

This editing process is a most essential part of cinematography. An odd collection of shots joined haphazardly will gain but little applause from an audience; yet by careful finishing they can be made a real joy to project and watch.

The beginner with only a small number of films could manage without special apparatus, but the purchase of a special ciné editing outfit would be a really worth-while investment and prove a great boon. The spindles greatly facilitate the winding of the film, and the cutting and splicing outfit will save much time and give a neat finish. As the amateur advances he will come across further pieces of apparatus, including a device for magnifying and illuminating the pictures for inspection, which, though not essential, are very convenient. At first, however, he can carry on without them, and they need not be mentioned here.

Before commencing, the beginner should be quite clear as to what the editing of his films calls for. The essential points to remember in editing are that, in the first place, all spoilt and unwanted frames are to be cut out and discarded, the various shots are then to be placed in presentable sequence, and titles added to make the continuity smooth and interesting (amateurs sometimes produce short shots without them, but they are a great asset, and indeed, essential for a good film). The whole collection is then to be spliced together to form long reels ready for projection.

The first procedure is to run the whole collection through the projector, just as it is, and make a note of the subject of each separate shot as it appears:

Now leave the films for a time, or at least do not alter them in any way yet, and work on the list you have prepared. Consider the various shots and decide in what order they should appear in the final film, numbering each shot in the order in which it has to appear.

The question of titles arises now, and these should be prepared before further progress is made with the film. The titles may be made either professionally or by the amateur himself. The making of these need not be discussed here, but it should be remembered that the object of the titles is to explain the picture and aid the smooth flow of the production. They are of great importance, yet nevertheless secondary to the picture itself. Words, therefore, should be used economically. A carefully-thought-out title can often be made to cover a number of different scenes. These points, then, should be borne in mind when deciding at what points titles will have to go.

It will be most convenient if the titles are filmed on one reel in the order in which they are to be used, so that when you are splicing together it will be a simple matter to cut off the title and splice it in as you come to it. Otherwise, I find it most convenient to make a list of the titles and assign each a letter (a, b, c, and so on), so that you can put the letter in your list of scenes after the scene it is to follow.

When going through your films you may also wish to include some further shots—more close-ups, for instance—and if the persons concerned are available this will be quite an easy matter, and will all help to improve the film.

Turning to your films again, they should now be run through slowly and critically, and mark on the edge of the film all fogged and otherwise spoilt frames which are to be cut out altogether, and, referring to your list, mark the sections which have to be cut out and placed elsewhere. Each

Thatching a corn rick. A form of action subject well worth the attention of the amateur ciné worker who wishes to secure a series of educational and record films.

film can be examined by direct inspection when cutting.

As the various short films are cut off there is a danger of them becoming misplaced. To avoid this, one of the most practical ideas I have come across is to hang them on pins in their correct order by means of one of the sprocket holes. The first shot you cut off, for instance, may have to be placed fifth in your final film, so that it should be placed on the fifth pin until you are ready to start joining.

All waste having been discarded, and the rest being in order, the splicing process should be put in hand. Three

feet of waste film will be required first as a leader. Following this will come the general title and other explanatory notes which may be desired, then will follow the shots and titles in order.

If the titles have been made on one spool in the order of their appearance, it will only be necessary to cut them off and splice in as you come to them. If prepared haphazardly it would be best to cut them apart and hang on pins in their appropriate places.

The completed film should be rewound on to a fresh spool and run through the projector, and if further improvements can be made these should

be put in hand without delay. The film will then be ready for the audiences.

When the film is finished it will, of course, contain a great number of joins which, sooner or later, may break apart. It is therefore a sound idea to prepare a copy film free from joins. If you are using positive material you could send the film to the makers and have a fresh copy made.

If negative-positive film is being used, the negative should be edited to correspond with the positive you have already done. New positives free from joins can then be taken off this at will.

Looking Ahead in the Ciné World

By
M. A. LOVELL-BURGESS.

CLOUR films are bound to come. And, as we know by experience where talking films are concerned, every new technical process means a more or less complete set-back at the studios while the film world is accustoming itself to the new technique. That is why it is important that there should be a good deal of experimenting in colour work, so that the technical process, when it does come, may be perfect—unlike the early “talkies”—and also that people may gradually get to understand the possibilities of this new art medium; not merely demand colour for colour's sake.

I spent an interesting evening recently at Eastbourne watching local enthusiasts' efforts with the new Dufaycolor film. Dr. Bodkin Adams is the President of the Eastbourne Amateur Ciné Enthusiasts' Club, and Mr. G. E. Inskeep the Hon. Secretary. The meeting was held at the Oak Cabin Restaurant. Excellent results have been obtained by members using this new colour process, and the showing of these films was followed by keen discussion.

Two films which won premier awards in last year's I.A.C. competition—“Egypt and Back,” and “Westminster in Winter”—were also screened.

Technical Innovations.

Colour is not the only new development on the way. The Pathéscope 17.5-mm. sound-on-film apparatus will probably be ready in October. The projector is being manufactured in this country as well as in America. The projector can be used either with variable density or variable width sound track, and pictures 10 ft. wide can be obtained. It is claimed that any standard film reduced to 17.5 mm. can be shown.

A new 16-mm. talkie apparatus is being sponsored by Gaumont-British Equipments.

A reversion to the old type of “beater” movement for actuating the film through the gate—so much in use at one time on standard projectors—has been made in the new Siemens 16-mm. projector.

First Film by R.F.S.

The Religious Film Society has completed arrangements with the Western Electric Company for the distribution to churches and religious organisations of their first film, tentatively entitled “Mastership” (two reels).

This film describes the life of a typical middle-class family and illustrates how, arising out of a quarrel, they individually visit the local Mission Hall, where the famous preacher, Lax of Poplar, is holding one of his regular meetings. Remarkable incidents, which Lax has actually encountered in real life, are reconstructed in the film, which is frankly evangelical in character.

“Documentary.”

“Documentary” is the new word in the film world. We used to call those news-reel items “interest” films, or, more briefly, “shorts.” But there is more to it than a change of name.

A documentary film worthy of the name is more than a faithful camera record—it features dramatic content. Moods, purpose, impressions, brilliant cutting and editing all go to make up the many facets of the documentary film. The mosaic art of this type of film should make a special appeal to the amateur cinematographer. Results depend, not upon elaborately constructed sets, but upon artistic insight and technique.

Amateurs Learn How.

Mr. Basil Wright chose “Cutting” for the subject of his talk at the Independent Film Makers' Summer School, held at Welwyn recently. He showed how documentary films

require an entirely different working procedure from the ordinary story film, and demonstrated the various effects obtained by different juxtaposition of the same shots. He also spoke of the welding of two sequences of dissimilar content into a harmonious continuity by cutting on a similarity of movement. Mr. John Grierson, who spoke on “Sound,” said that just as in the early days of cinema the film was merely a record of what a playgoer might expect to see from the front row of the stalls (amateurs, please note!) so it is with sound to-day. He went on to explain that most directors to-day think only in terms of what might be called “unbroken sound,” just as in the days of the early silent films. But sound could be cut, dissolved, superimposed, and voices used for conveying atmosphere instead of dialogue. And rhyming, chanting, and the subjective word-building of James Joyce could find a place in the sound film.

Proposed Documentary Film.

The London Group of the Independent Film Makers' Association has decided to work on Educational and Documentary films. “Markets” is the provisional title of a film dealing with the three London markets, Covent Garden, Smithfield and Billingsgate. The response of one's mind to a good idea is, as usual, “Why hasn't it been done before?”

At a business meeting Thomas Baird was re-elected Hon. Secretary, J. C. H. Dunlop, Hon. Treasurer; E. G. H. Lightfoot—to whom I am indebted for the above details of the I.F.M.A. Summer School—Hon. Assistant Secretary, and L. Beisiegel was elected Editor of the *I.F.M.A. Bulletin*. A wide membership is aimed at by the I.F.M.A., so as to finance documentary films. Another aim is the collection of a library of scripts for the perusal of members.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

A special folder offering second-hand surplus apparatus taken in exchange during the past season has just been issued by the City Sale & Exchange, Ltd., 54, Lime Street, E.C.3. It is full of attractive items, many of which are illustrated, and all the apparatus is offered at extremely attractive prices. All those in search of a bargain in cameras should apply for a copy of this folder, which will be sent gratis and post free on application to the above address.

A collapsible lens hood is a desirable accessory for every modern camera, and an extremely practical hood embodying all that is necessary is the Zodel collapsible lens hood offered by Messrs. Wallace Heaton, Ltd., 119, New Bond Street, W.1. This is telescopic in character and folds flat for carrying. It has no loose parts, and is so designed that the various sections do not rub or chafe on each other, so that it is impossible for the black finish inside to become worn through rubbing. It is made in two sizes, and with adjustable screws, which will fit most of the popular lens sizes available on modern hand cameras. Filter rings to accommodate $1\frac{1}{4}$ or $1\frac{1}{2}$ in. filters are provided, and a notable feature is that, although the body of the hood is circular to clamp on the lens, the front aperture is rectangular and can be adjusted for either vertical or horizontal pictures. There is also an additional top lens hood which is hinged and can be used, if necessary, as a cap. The hood sells at 7s. 6d. for all models, and the filter rings are 2s. each.

We regret to have to record the death of Mr. John Harrington, who died recently in Sydney, Australia, from heart trouble. Mr. Harrington was the Chairman and Managing Director for a great many years of Harrington's, Ltd., photographic manufacturers and dealers, of Sydney, Melbourne, Brisbane and Adelaide. He was also responsible for "Harrington's Magazine," which was well known as one of the leading periodicals devoted to photography in Australia.

Stolen.—A reader informs us that he had his camera stolen from a summer school at New Milton, near Bournemouth, on Tuesday or Wednesday, August 21st or 22nd. It is a Balda $2\frac{1}{4} \times 1\frac{1}{8}$, f/3.5 lens No. 594743. Anyone to whom the camera is offered should communicate with Mr. I. Seruya, 1, The Gables, The Vale, N.W.3.

Verdex is the suggestive name of a new gaslight paper introduced by Messrs. Agfa. It yields green tones by development only. The firm's Lupex blue-black developer is recommended for a bluish-green colour, but rather yellower green

results, according to our brief test, from an M.Q. developer, a formula for which is included in the instructions. Another unusual feature of this gaslight paper is that development takes from two to three minutes. After development the prints are rinsed, or placed in an acetic acid stop-bath, and fixed in acid hypo. Although a green colour is of limited use, this is an easy way of securing it when the character of the subject makes it appropriate.

In the Replies page of our issue for September 5th we gave an amidol formula in which the amount of sodium sulphite was given as 2 oz. of crystals. This should have been 1 oz., or if the anhydrous sulphite is used, $\frac{1}{2}$ oz.

The Ensign "Print-Neg" Album is a new idea for the amateur that will be appreciated by many readers of "The A.P." The album "pages" are in a continuous strip that folds up in fan fashion, and each page to which a contact print is affixed has a pocket at the back to hold the negative of that subject. Each little album takes six prints and six negatives, and six albums fit neatly into a book-box. A collection of these resembles a set of small volumes, and will contain a very large number of photographs. Book-boxes with six albums for miniature prints cost 1s. each in card, or 2s. leather covered. For $2\frac{1}{4} \times 3\frac{1}{4}$ prints and negatives the price is 2s. and 3s. respectively. They are obtainable from Ensign, Ltd., High Holborn, W.C.1.

The British Photographic Fellowship started their 2,000-mile tour through France, Germany and Austria last week. The members of the party are travelling the whole journey in two A.E.C. "Q" luxury coaches chartered from Elliott Bros. (Bournemouth), Ltd. This is the first time that members of a photographic association have undertaken a Continental tour in their own motor coaches, which they have taken across the Channel with them. Mr. S. W. Kenyon, the organiser of the tour, is to be congratulated on his enterprise.

The Midland Salon of Photography was opened at the Castle Museum, Nottingham, on August 18th, and remains open until the end of the present week. This is the second occasion on which the Midland Salon has been held in Nottingham since it was first organised in 1923 under the auspices of the Midland Photographic Federation. The first Salon was held at Worcester. It has also been held at Birmingham, Leicester and other important Midland towns, a different centre being chosen each year. On this occasion a highly successful exhibition of pictorial work has been brought together. About 400 prints were entered

from overseas; of these 173 were accepted. Nearly 500 were sent from workers in Great Britain, of which 141 were chosen. There were also well-supported scientific and natural-history classes, and a large number of lantern slides were entered. The premier award was made to a fine print by Leonard Misonne, of Belgium. The local classes were notably strong, and the entire Salon can again be counted a success in every way.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 29. Rules in the issue of August 29.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18–September 15.

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31–September 15. Exhibition Secretary, c/o 18, Ramhill Road, Scarborough, Yorks.

Seventh International Photographic Salon of Japan. —Open, (Tokyo), October 1–10; (Osaka), October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shinbun, Tokyo.

London Salon of Photography.—Open, September 8–October 6. Secretary, 54, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8–October 6. Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17–20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakow.—Open, August 26–September 30, 1934. Secretary, Fotoklub Polskiej, Y.M.C.A., Krakow, Krowoderska, 8, Poland.

Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26–December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 19; open, December 10–15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography, Antwerp, 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerst, 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid, Spain.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, October 6. Particulars from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Cut Films.

How are cut films loaded in dark slides?
J. S. G. (Whitehaven.)

An answer to your query depends very largely on the sizes of the films. If they are small they can be put in the slides just as plates are, and backed up with a piece of black card of suitable thickness. If, on the other hand, the films are large, they must be put into sheaths made for the purpose.

Paper Negatives.

With paper negatives how is the difficulty of the grain of the paper got over? I. H. F. B. (Putney.)

In the case of paper negatives they are made as translucent as possible by means of oil, vaseline, Canada balsam, and so on. Although this makes them more transparent it does not, and cannot, do away altogether with the grain of the paper.

Spoilt Negatives.

I had some films professionally developed, and send a sample. Can you advise a method to remedy this professional mess-up?
G. T. C. (Doncaster.)

We cannot suggest remedies for films that are hopelessly ruined, whether by professionals or others. The negative you send has been completely spoiled, and there is nothing to be done but to throw it away.

Size of Camera.

What size of camera should I choose so that it will give negatives that will enlarge up to postcard size?
W. A. K. F. (London.)

Any sort of camera worthy of the name will produce negatives suitable for enlargement up to postcard size. Even cheap box cameras costing considerably less than £1 will do this. It is not a question of size at all, and many exhibition enlargements, 20 x 16 in size, are made from negatives no larger than a postage stamp.

Stained Negatives.

Why have the enclosed negatives taken on this peculiar change? Will age take any effect on negatives?
R. S. P. (Peterborough.)

You have either never seen our repeated warnings about careful fixing and washing, or else you have ignored them. Such negatives as those you send are completely spoiled through careless and hurried methods, and there is no remedy. As negatives are not immortal they are certainly affected by time, but a properly treated negative should look quite healthy after twenty-five or even fifty years.

Stained Prints.

What is the cause of the yellow stains on these gaslight prints?
P. C. (Colchester.)

We have repeatedly pointed out in our replies and elsewhere that such stains as you are getting are almost invariably due to insufficient rinsing between developing and fixing. You must not allow the fixing bath to be contaminated with developer carried over by the prints.

Mounting Lenses.

I have two 60-in. single lenses which should give together a 30-in. lens. What length of mount would they require? What is the smallest size plate that could be used with these lenses for lunar and terrestrial photography?
F. L. V. (New Southgate.)

The focus of your two 60-in. lenses combined would be 30 in. only if the glasses were touching each other, which is, of course, not practicable. The separation of the lenses can be varied within considerable limits. The resulting focus can be found by dividing the product of the two focal lengths by their sum less the separation. We do not understand what you mean by asking what is the smallest plate size that can be used with such a lens. Surely this would depend upon whether the particular plate would contain the subject you were photographing.

Choice of Paper.

When I use — paper I cannot decide which grade to use. Is there another paper with more general characteristics that will avoid the use of vigorous, medium and soft?
A. R. M. (Twickenham.)

There is no one paper that will give you the best result from negatives of different density and contrast, and that is why different grades of paper are made and used. You can only decide which sort to use by studying the negative, and examining the result of a print on a given paper. If this print is too flat and dull use the more vigorous grade; if it is too strong and contrasty use a normal or soft grade.

Damaged Negative.

Why is the enclosed negative so spotty and lined?
Is it possible to improve it? E. G. P. (Shenfield.)

In the absence of any information as to methods of development we cannot say definitely what has caused the trouble with your negative. There are indications, however, that it has been carelessly handled, and we see that the surface has been abraded, possibly when removing surface moisture. It is also clear that the film has been subjected to too high a temperature, the spots being small blisters. The damage is irreparable.

Type of Enlarger.

I want an enlarger so as to make prints about 15 x 10 in. from 3½ x 2½ negatives, often from only part of the negative. Has a vertical enlarger any advantage over a horizontal, or vice versa?
F. J. (St. Albans.)

Both types of enlargers have their advantages and disadvantages. There is one thing that you must at any rate beware of, and that is that some vertical enlargers will not enlarge above a certain limited size, and this limit may make it impossible for you to enlarge part of a small negative up to the size you want. Apart from this limitation one type of apparatus is just about as good as another. Many vertical enlargers have automatic focussing, which saves time and trouble.

Primuline.

I wish to sensitise some paper with primuline. Various chemists I have tried do not know it. What is this substance? A. E. W. (Acton.)

Primuline is a dye, and not likely to be obtained from a chemist. The Primuline process is generally called Diazotype, and the description of the method of working it takes over two pages in the "Dictionary of Photography," so that you will realise it is not a matter that can be dealt with in the form of answers to questions. There is a good deal more in the process than merely sensitising paper.

Film Adapter.

Is it possible to purchase a 3½ x 2½ roll-film adapter for a 4-plate camera? Can a similar fitting be had for a 9 x 12 cm. camera?
A. E. M. (Stranraer.)

It is impossible to answer your question. Such roll-film adapters as are available will not fit any and every camera, and only an experienced dealer can tell you whether any particular camera you have is capable of being adapted to take roll film in this way.

BARGAINS FROM GAMAGES

ZEISS

PHOTOGRAPHIC LENSES—apart from their unquestionable superiority of design—are manufactured under such ideal conditions that

The BEST DEFINITION

is assured for each and every lens which succeeds in passing the stringent tests of the ZEISS factory.

For MINIATURE CAMERAS

the *UTMOST* PERFECTION of definition is a *sine qua non*, and neglect to insist on a ZEISS lens is undoubtedly responsible for many failures and much disappointment to owners of miniature cameras.

Write for List P. 51, and details of the best lens for **YOUR** camera, to **CARL ZEISS (LONDON) LTD.**

WALL'S DICTIONARY OF PHOTOGRAPHY

AND REFERENCE BOOK FOR THE AMATEUR
AND PROFESSIONAL PHOTOGRAPHER

THIRTEENTH EDITION

Edited and largely re-written by
F. J. MORTIMER, Hon. F.R.P.S.

Price 7/6 net

By post 8/-

From all leading booksellers
or direct from the
Publishers

All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on such recent developments as infra-red, high-speed and colour photography. The volume provides practical information in dictionary form on every phase of the subject—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. Its contents are made readily accessible by the extensive use of cross references.

Cloth Boards. Crown 8vo. 645 pages.

THIRD EDITION

REVISED THROUGHOUT AND
BROUGHT RIGHT UP-TO-DATE

A S E A S Y A S A · B · C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography: it should form as much a part of the outfit as the camera itself: it is an ideal present to give an amateur photographer.

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD STREET, LONDON, S.E.1

The Amateur's Emporium

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26b, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

GENUINE Bargain.—9x12 Contessa Deckrullo Focal-plane Press, 6-in. Tessar f/4.5, single plate back, lens shade, 2 filters, Jaynay and Eastman tripods, slow speeds, medium, fast, in perfect order, 3 D.D. slides, 16 single, case, outfit nearly new, Enlarger, whole-plate horizontal, Cooke f/4.5 anastigmat lens, gas-electric, iris, f/6.8, Westminster enlarging easel, splendid enlarging outfit, large dishes, measures, gadgets, heaps sundries; owing to disability to right arm owner cannot operate; first decent offer accepted.—10, Hawkeswood Rd., Southampton. Granville

Photographic
Products

—ARE GUARANTEED
FIRST QUALITY

All Granville Papers and cards are subject to a strict process of testing before being offered for sale; every sheet being thoroughly examined before leaving our works. Granville Papers contain a high content of silver, and produce vivid sparkling prints. Speed, Latitude and Gradation are further characteristics which have made Granville Products so universally popular. Note the prices.

PHOTO-ELECTRIC EXPOSURE METERS

We Stock all the Best.

THE "PHOTOSKOP"

The ideal exposure meter, entirely
automatic and in no way dependent
on the human factor. Unlike other
electric exposure meters, the
Photoskop indicates the exposures
directly without reference to tables
and without any calculations.

PRICE, including leather case,

£5 : 5 : 0

THE "WESTON"

This new Type 2 Weston
Universal Exposure Meter
is suitable for use with all
"still" or "movie" cam-
eras. Price... £11 0 0
Model 627, for Cine Cameras
only... £8 10 0
Model 627, for Leica
Cameras only... £8 10 0

THE "OMBRUX"

Small and compact, gives a direct
reading for a lens aperture of f/6.3, with
23 Scheiner. For other apertures and
emulsion speeds conveniently arranged
tables are supplied. Price... £4 4 0

THE "BLENDUX"

FOR ALL CINE CAMERAS.

Similar to the "Omburx," but fitted
with scale giving a direct reading for
any cine camera. Price... £4 4 0

All delivered post free in U.K.

FIRST CLASS CAMERAS TO SUIT ALL REQUIREMENTS

THE WORLD'S SMALLEST REFLEX

THE "PILOT"

The smallest roll-film reflex camera on the market: measures only 5 $\frac{1}{4}$ x 2 $\frac{1}{4}$ in. The Pilot springs to "infinity" position on pressure of a button. Magnifier over ground-glass screen for ultra-sharp focussing. Simple lever movement to change the film, automatic exposure indicator.

Gives 16 exposures 3 $\frac{1}{4}$ x 4 cm. on V.P. film.
With f/3.5 Zeiss Tessar lens. £18 15 0
With f/2.8 Zeiss Tessar lens. £21 0 0
Leather case. £1 0 0

VOICTLANDER "BRILLIANT"

The full-size view camera, giving twelve exposures on 2 $\frac{1}{4}$ x 3 in. size roll film, with automatic exposure indicator, gives a brilliant image of the actual picture which will be recorded on the film.

With f/7.7 Voigt lens, in focussing mount. £2 5 0

With f/6.3 Voigt lens, in focussing mount. £4 5 0

With f/4.5 Skopar lens, in focussing mount, Compur shutter, reduced price £6 5 0

"ROLLEICORD" AND "ROLLEIFLEX"

THE ROLLEICORD, an inexpensive camera by the makers of the well-known Rolleiflex, gives 12 exposures 2 $\frac{1}{4}$ -in. square on 2 $\frac{1}{4}$ x 3 in. roll film, with Zeiss f/4.5 Triotar lens. Compur shutter. £10 10 0

THE ROLLEIFLEX gives 12 exposures 2 $\frac{1}{4}$ -in. square on 2 $\frac{1}{4}$ x 3 in. roll film, automatic film indicator, simple lever changing mechanism, price with f/4.5 Zeiss Tessar lens, in Compur shutter. £20 6 0
With f/3.8 Tessar lens. £22 10 0

THE "NOVIFLEX"

A new roll-film reflex, giving 12 2 $\frac{1}{4}$ -in. square pictures on 2 $\frac{1}{4}$ x 3 in. roll film, full-size reflex image, focussing hood fitted with magnifier, RACK FOCUSING, automatic exposure indicator. Price, with Victor f/3.5 lens. £10 10 0
With Hugo-Meyer f/3.5 lens. £12 12 0
With Hugo-Meyer f/2.9 lens. £16 10 0

THE NEW JUSTOPHOT EXPOSURE METER

Price 35/-
Leather case, 3/6

Reprinted from "The British Journal of Photography,"
March 9th, 1934.

"In this new model of the well-known Justophot Meter, the makers have succeeded in still further improving an instrument which has been found a most reliable and convenient guide to the correct exposure of plates and films. . . In its new form the Justophot is one of the best investments that a photographer can make."

LATEST CAMERAS & ENLARGERS ON EASY TERMS

We are the Leica specialists—Why not get a Leica camera and keep on getting good pictures all through the Autumn and Winter?

LEICA MODEL III With F/2 SUMMAR LENS

With automatic focussing, enabling lens focusing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement.

£33 : 13 : 0

Nine monthly payments of 78/6.

NEW LEICAMETER

Better all round and more versatile than any previous model. It possesses the additional advantage of making indoor recording easy. Built on the photonic light-cell principle. No batteries. Model 617-2.

£10

Nine monthly payments of 23/4
FIRST AT BOND STREET

The New Leica FOCOMAT ENLARGER

With automatic focussing. With effortless speed this enlarger will give perfect pictures from your Leica negatives, whether you want enlargements to the size of 31 x 21 in. or up to 15 x 10 in. The diffused illumination gives soft, harmonious enlargements and eliminates any possible scratches on the negative. Pre-eminently suitable for the enlargement of miniature negatives. For use with Leica camera lens.

£13 : 19 : 0

Nine monthly payments of 32/7.

'AUTOMAX' PRINTS 3 1/2 x 2 1/2 from your LEICA NEGATIVES—2/- A DOZEN

ALL-METAL 3 1/2 x 2 1/2 ZODEL de LUXE

THE CAMERA FOR FINE SERVICE.

With f/4.5 anastigmat lens. Delayed-action Compur shutter, rising and cross front, double extension. Very small. Metal body.

£6 : 17 : 6

Nine monthly payments of 16/1.

The Automatic 'ROLLEIFLEX'

Here's the camera to get life into all your pictures. Has every gadget that goes for absolute perfection. Takes 12 exposures on standard 1/2 exposure 3 1/2 x 2 1/2 roll film. Zeiss Tessar f/4.5 lens.

£20 : 0 : 0

F 3.8 Zeiss Tessar.

£22 : 10 : 0

Nine monthly payments of 46/8 or 52/6.

The New 'DEKKO' CINÉ CAMERA

For 9.5-mm. Films.

The small cine with unlimited possibilities. Has three speeds—half, normal and slow-motion. Can also be used for snaps, time exposures and portraits. With Dallmeyer fixed-focus 20-mm. f/3.5 lens. **£6 : 6 : 0**

Nine monthly payments of 14/9.

BIGGEST OFFER!

READ THE SPECIFICATION

For 16 pictures on vest-pocket roll film. Fitted with Skopar anastigmat $f/3.5$ lens in Compur shutter, speeded 1 to $1/3000$ th sec., and T. and B. This cleverly designed and very modern camera is an instrument of great precision. New type focussing knob can be set whilst the camera is closed. One press and instantly the Perkeo springs open to the ready position. The focussing knob is so placed that turning the camera round to alter the focus is avoided.

Every detail has been given careful consideration in design and manufacture. The name Voigtlander has always been a byword in the trade for the highest class and finish.

The Perkeo is real pocket size $4\frac{1}{2} \times 3\frac{1}{2} \times 1\frac{1}{2}$ over all. Weighs only 13 oz. Ideal for sports, holidays, travel, hiking. Including plated leather sling, depth of focus table, exposure calculator and cable release, and maker's full guarantee.

Night Photography

Although the shorter days are here the keen amateur photographer can find numerous interesting subjects provided he is equipped with one of the Zeiss Ikon cameras mentioned under, and uses the hypersensitive panchromatic negative material now available in many brands of film. Theatres, dances, banquets and dinner parties, fairs, exhibitions, street scenes at night, are a few subjects which can be tackled easily with the Super Ikonta, Super Nettel and Contax.

The possessor of a Super Zeiss Ikon camera knows no photographic close season.

SUPER IKONTA No. 530. Gives sixteen exposures on the usual $3\frac{1}{4} \times 2\frac{1}{4}$ spool—each picture $2\frac{1}{4} \times 1\frac{3}{4}$ in.—a useful size without enlarging. Distance meter coupled with Zeiss Tessar $f/3.5$, Compur shutter, 1 to $1/300$ th second, and Time and Brief Time movements .. **£16 12 6**

SUPER NETTEL. Uses Contax daylight-loading spools and gives 36 exposures $1\frac{3}{8} \times 1$ in. (24×36 mm.). The Super Nettel is a most worthy addition to the Zeiss Ikon range of miniature cameras. Distance meter is coupled with Tessar and the imperishable metal focal-plane shutter is automatically and accurately speeded for $1/5$ th to $1/1,000$ th sec., also movement for Time exposures. Baseboard protects lens when not in use.

With Zeiss Tessar $f/3.5$ **£21 12 6**

With Zeiss Tessar $f/2.8$ **£23 10 0**

CONTAX. The peak of perfection in miniature cameras. Coupled long base distance meter, all-metal focal-plane shutter, $\frac{1}{2}$ second to $1/1,000$ th second and Time. A choice of ten Zeiss lenses, all interchangeable. Daylight-loading spools for 36 exposures—all emulsions—or cassettes for lengths of films up to 36 exposures.

$F/3.5$ Zeiss Tessar **£27 10 0**

$F/2.8$ Zeiss Tessar **£30 0 0**

$F/2$ Zeiss Sonnar **£35 10 0**

$F/1.5$ Zeiss Sonnar **£51 10 0**

There are many other Zeiss Ikon cameras fitted with $f/3.5$ lenses. Prices from £7 10s. Ask your dealers for lists, or send to us for lists and information or advice.

VOL. LXXVIII. No. 2393.

THE special Autumn Number of *The Amateur Photographer* will be published next week. This, as in previous years, will be considerably enlarged in size, and in addition to extra art pages of pictures from the exhibitions, articles appropriate to the beginning of the autumn season will prove valuable to the large number of amateurs who are continuing their photographic activities. Nowadays the practice of amateur photography has ceased to be seasonal. Modern high-speed films and plates, coupled with big-aperture lenses as standard fittings for so many cameras, have definitely extended the season for outdoor photography, even for the snapshotter. This work is therefore within range of practically every camera to-day, in addition to the enormous amount of photography that can be conducted indoors, either by artificial light or in the dark-room. All these matters will be dealt with in the Autumn Number, and our readers are advised to secure copies of this special issue at an early moment. It will be published next Wednesday. The attractive all-over three-colour cover should be looked for on the bookstalls.

R.P.S. Entries.

The number of workers who sent in prints for the pictorial section of the Royal Photographic Society's Exhibition was 670, of whom 350 were British, 58 from the Dominions, 140 Continental, and 110 from America. Only 200 of them, with 257 prints, had the honour of selection. The Dominions, numerically, have rather a poor showing; on the other hand, the Continent is represented by 49 exhibitors with 53 works, and America by 44 exhibitors with 52 works. Among

TOPICS of the Week

CORFE CASTLE.

A subject that has been photographed many times receiving treatment from a painter who makes a useful foreground object for the photographer.

the lantern slides there is shown, according to Mr. Dudley Johnston, who has made this section of the exhibition, as well as the pictorial section, his own particular care, a distinct improvement upon the rather disappointing level of last year. A larger entry—about 800—was also received. It was possible from these to select about 180 slides of satisfactory quality. The slides indicate a tendency to revert to the good old browns and warm tones. Only about half a dozen thiocarbamide slides are included, and this year that process has been confined to subjects really fitted to it. The effort of some workers in past years to represent certain landscapes in a blue tone cannot be regarded as an emphatic success.

Undressed.

If Mrs. Grundy were informed, without qualification, that there were five-and-thirty nudes on exhibition at the Salon, she would probably make her way there at once, armed with a very pointed umbrella, and she would not be much appeased by the fact that the exhibition also includes the portraits of a few clergymen. But really the set of pictures is remarkable as showing in how many ways the unclothed human figure can be treated, always free from offence. What one feels in front of these examples is, not that they are just put in because they are nudes, to satisfy a vulgar curiosity, or to evidence a spirit of daring on the part either of the worker or of the hanging committee, but that they are there because the human body—after all, creation's noblest work—does present opportunities for strong and delicate pictorial treatment such as no other subject can afford.

Entrance and Exit.

There is a little bit of good psychology in arranging the first and last works on an exhibition wall. The Salon has always been very happy in this respect. This year it strikes a musical note. No. 1 is a man playing a sousaphone, and the picture nearest the door by which the visitor leaves is an arrangement of bagpipes. The Royal begins with the jolly spectacled head of a man prepared to enjoy good things, and ends with an open gateway to bow you out. Comparisons are never more odious than between the two exhibitions. One little difference we note is that the size of the picture is, on the whole, rather smaller in the Royal than in the Salon. There is something which dictates the proper size, within limits, of the exhibition picture. It is the size of the great bulk of the pictures in these two exhibitions. One feels that if they are very much smaller or very much larger they begin to lose interest. To the Royal on Press day there came a lady reporter, whose very first reporting job it was, and who knew nothing

about photography. Her naïve reaction to the exhibition was shown in her acclamation of an immense commercial enlargement on the landing—a picture of a baby, measured by yards—as the picture of the show! Which rather goes against what we have just been saying.

Prohibitions.

The man who carries a camera must have about him a constant awareness of prohibitions, much as a motorist has the traffic lights or the policeman's signal ever in his consciousness. The camera is a suspected instrument. The less the authorities concerned know about photography the more deeply suspicious they grow. It is, of course, not for the photographers under interdict to challenge the opinion of authority.

"Theirs not to make reply,

Theirs not to reason why."

Yet, in fact, they often wonder, even supposing a photograph were taken within a zone of prohibition, what possible use, honest or nefarious, could be made of it. Such

a photograph as any casual person could obtain of, for example, the exterior of an arsenal, is much less likely to convey useful information than an intelligent description by someone who had seen it and had afterwards made a few notes. It is readily granted that there are occasions when a photograph, obtained with some carefulness and showing intricate detail, as of machinery, may be useful to other parties, but in general this suspicion of photography is a vestige of war psychology. It is the fear of document. Things which are merely said are forgotten. Things which are written can be explained away. But things which are photographed are unimpeachable evidence, or at least so think those who have an exaggerated idea of the camera's capabilities. All the above is inspired by two inconsequent news paragraphs of the same date—one that air passengers in Germany are to be prohibited from taking photographs while flying, and the other that at a nudist conference near London members will not be permitted to bring cameras.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Pyro-Ammonia for Slides.

Although I have succeeded in making some satisfactory warm-tone slides, I cannot get the brilliance and transparency of some exhibition slides I see from time to time. I am told that the only way to obtain this quality is by using a developer with pyro and ammonia in combination. If this is so, can you give me a reliable formula?

B. L. (Northampton.)

It is not correct to say that pyro-ammonia is the only developer that will give warm-tone slides of the highest quality, as such slides can be, and are, produced with other developers. At the same time pyro-ammonia is capable of giving excellent results, with an image of fine grain, and the shadows rich yet properly transparent.

What you must bear in mind is that the perfect slide is not merely the result of a particular developer. Much depends on the negative from which the slide is made; on the character of the lantern plate; and on exposure and development being "correct" within narrow limits, and properly adjusted to each other.

We give a formula and a few hints, the information being abridged from the article on lantern slides in "The Dictionary of Photography." You should first make up three stock solutions, which will keep very well separately, and from which the working solution can be prepared just before use.

| | | | | | | |
|-------------------|----|----|----|----|----|---------|
| A. Pyro | .. | .. | .. | .. | .. | 1 oz. |
| Sodium sulphite | .. | .. | .. | .. | .. | 2 oz. |
| Citric acid | .. | .. | .. | .. | .. | 40 grs. |
| Water to | .. | .. | .. | .. | .. | 10 oz. |
| B. Ammonia (.880) | .. | .. | .. | .. | .. | 1 oz. |
| Water to | .. | .. | .. | .. | .. | 10 oz. |

| | | | | | | |
|---------------------|----|----|----|----|----|--------|
| C. Ammonium bromide | .. | .. | .. | .. | .. | 1 oz. |
| Water to | .. | .. | .. | .. | .. | 10 oz. |

Various working solutions can be used, but it is advisable to keep to one only at first, until its working is understood, exposures noted, and the tone given on different plates studied. Such a solution, giving tones round about warm black, is A, 30; B, 60; and C, 30 minims per ounce of water. With this, development at about 65° Fahr. will range from two to three minutes, and exposure should be adjusted so that the development time is within these limits.

Warmer tones are secured by increasing the amount of C solution, without varying the other quantities. This should not be done at random, but to a definite quantity; and a further series of experiments must then be undertaken to arrive at data for the necessary increase in exposure, and the longer development time. As variations in colour give more or less deceptive visual densities to the slide, it is advisable not to rely only on inspection, but to work by time and temperature, or by the factorial system. The latter is, for several reasons, more satisfactory here than in the case of negative-making.

Another point to note is that slides made in this way can be judged properly only by actual projection; the appearance in the hand may be very misleading. Tones that are beyond a certain warmth are seldom satisfactory, and care should therefore be taken not to go too far in the direction of further restraining the developer, and unduly increasing exposure and development time.

An acid fixing bath should be used, and the slide should on no account be exposed to actinic light till fixation is complete and the slide has been well rinsed.

"Seeing" the Big Exhibitions

THE first thing that strikes the tyro on his first visit to the "Salon" and "Royal" is the remarkably fine technical quality of the work shown. This is inclined to depress the beginner, making him feel inclined to scrap all his own efforts and give up the craft. It should be remembered, however, that all the exhibitors represented at these great shows were once in a similar position, and probably experienced the same sensations, so let the new-comer take heart.

To the visitor with unlimited time, the tour of the exhibitions can be done more or less haphazardly, with a pause at will before those examples which most specially appeal. Quite a large number of visitors will, however, have only a very limited period at their disposal, and it behoves them to use some kind of system for viewing the exhibits in the most beneficial manner.

The Salon.

Let us take the Salon first. It is easy of access, adjoining, as it does, Trafalgar Square, which is a convenient spot to reach from any of the great London termini, or, indeed, from any suburb.

A catalogue is obtained at the office on the stairs, and the first tendency is to open this list at once. A better idea is to go round the walls casually first, before consulting the catalogue, viewing the pictures with what might be called a grouping idea.

Pick out those pictures all the work of one artist, and see how his individuality stands out in that particular sphere. It is surprisingly easy for even a novice to group pictures together in this manner. The fact of the Salon exhibition being housed in one large apartment also makes this idea easy of accomplishment.

Now open your list and go steadily round, spending as much time as possible over each work. It is amazing how soon one picks out the kind of work that makes a special appeal. Having found a favourite type of subject or mode of expression, here is the place to pause. Sit down and look at it leisurely, and find

Visitors to the London Salon and the Royal Photographic Society's Exhibitions, which are now open, must view the exhibits with varied feelings, and the casual visitor is usually surfeited with such a large assortment of subjects and treatments that he does not actually "see" the exhibition in the most beneficial manner. A little attention to details, as indicated in the following article, may make quite a lot of difference in this respect.

out what there is about it which is so much different from the ordinary photographs which grace your own albums.

So-called "stunt" pictures will be found on the walls, and should by no means be ignored, even though that type of work is abhorrent to some visitors. Every such picture has a tale to tell in the disposal of its masses, the line of its curves, the splashes of its light, and it is for these reasons that they are selected by the Committee for a place on the walls.

Prints are made by various processes, and the worker who is used to only one kind of printing medium will have an opportunity of judging the advantages or otherwise of other processes shown. The mounting should also be observed.

The "Royal."

While the Salon is concerned only with pictorial work, the R.P.S. has other varied phases of the craft, and the visitor to Russell Square will find the array there rather bewildering. If he has just come from the Salon, it is quite a good plan to go round one of the departments other than the pictorial one, so as not to be too surfeited by the array of pictorial excellence.

The transparency section is a splendid place to start at in this connection, and as it is housed in the studio on the ground floor it does not entail travelling through other rooms to get to it.

Note should be taken of the tones of the lantern slides shown. Here the finest gradations in tones are

shown on perfectly-made slides by famous slide-makers, and here the would-be slide-maker can get an excellent idea of what the appearance of his slide must be before it is entered in the annual slide competition of this journal.

Trade and Technical Exhibits.

Trade exhibits are fairly numerous also, and the visitor has an opportunity of seeing what excellent results are obtainable on the various materials abounding when the work is done by expert manipulators. The array of apparatus will also delight the enthusiast.

A smaller number of people, probably, will be interested in the natural-history subjects and X-ray photographs, but they should not be missed, as they give an excellent indication of the assistance photography has been to science, and, as such, help the amateur to feel that the hobby he is pursuing is not just a playtime occupation. Infra-red photographs will interest most amateurs, and although the process is by no means an amateur's pastime, the results the experts produce cannot fail to interest.

It is well to finish the round of this exhibition with the pictorial section, and the method applied at the Salon may be equally effective here. The visitor is able to leave the exhibition with two or three prints stamped in his memory, as examples to follow in his own work.

Lessons to Learn.

Two important points must be stressed in closing. Spend as much time as possible at both exhibitions, and do not try to rush them in a brief interval. Go with an unbiased mind, prepared to learn from the exhibits, whether they please your fancy or not.

Even if the visitor is not himself an exhibitor he can make useful mental comparison of his best prints with the work seen. Are they of equal quality, colour, etc., and do they appeal in the way that a good piece of technical work always does appeal to the keen photographer? If not, the reason should be sought for and the fault remedied.

Border Your Prints

By DONALD G. SHELDON.

MOST photographs are improved by being printed with a neat margin. D. & P. firms are well aware of this, and turn out their prints with a white edge, obtained by masking. These white edges do not suit every picture, and many subjects look better when "framed" in a darker border.

Such dark borders may be produced quite simply on both contact prints and enlargements. The only requirements are a piece of glass a little larger than the prints and some opaque paper. For contact prints use a spare glass which fits the printing-frame. The opaque paper may be some of the black wrapping used for gaslight or bromide paper.

Take a piece of the paper and cut it accurately and cleanly to the exact size of the space you wish the picture to occupy. This space should be small enough to leave a quarter-inch margin when laid on a piece of the printing paper. Paste the black paper on to the glass, taking care to wipe away any surplus paste at the edges of the paper.

If a piece of printing paper is now placed behind this black "disc" in a safe light, and then exposed to the printing light, only the uncovered margins will be affected. For contact prints this exposure to light may be done in the usual printing-frame. For enlargements, the bromide paper is laid face upwards on a table, the glass and disc placed over it, and the exposure made by switching on white light for a few seconds. The glass and bromide paper should be kept in even contact by pressure in the middle.

If the opaque disc is in contact with the printing paper, the resulting border will have a sharp edge. Sometimes a slightly diffused margin is preferred; in this case the border is printed with the glass interposed between the two papers. Examples of both kinds of margin are shown here.

Having printed the border, the next step is to print or

"A Call from the Gang." Printed with diffused border.

enlarge the picture on to the paper in the usual way. With development papers, the dark edge will appear along with the picture in the developing dish. With printing-out papers it is already visible when the paper is removed from behind the opaque disc.

When the print has passed through its various stages and is ready for finishing off, the dark border should be trimmed to a width to suit the print. In some cases the merest suggestion of a margin is all that is required.

A dark border is particularly effective for portraits with plain backgrounds, and for views in which lines tend to "run out of the picture." Since the discs of opaque paper are easily cut to any shape or size, it is very little extra trouble to "frame" such pictures in this way, and this trouble is well repaid by the improvement in the resulting print.

At-home Portrait. Printed with clean border.

With F/2 Summar in Collapsible Mount.

Self-capping focal-plane shutter, speeds 1 to 1/500th sec., T. and B., automatic focussing, interchangeable lens mount. **£33:13:0**

Nine monthly payments of 78/6.

Fitted with 1/3.5 Elmar anastigmat. **£25:0:0**

Nine monthly payments of 58/4.

THE LEITZ "FOCOMAT" ENLARGER

With Automatic
Focussing.

Takes the standard 5-cm. focus Leica lens, screw-in fitting, automatic focussing adjustment, scaled from 2 diameters up to 10 diameters. Will take negatives 18×26 mm., 24×36 mm., 3×4 cm., and 4×4 cm. Metal masks can be supplied for either of these sizes. (Write for leaflet). **£13:19:0**
Nine monthly payments of 32/7.

SPECIAL PURCHASE OF PATHÉSCOPE 200-B PROJECTORS

(SLIGHTLY SOILED)

LIMITED NUMBER ONLY

9.5 mm. (British made).

£10:17:6

Cost £15:0:0

Nine monthly payments of 25/5.

Fitted with highly efficient 250-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Very compact. Fan-cooled and asbestos-lined lamp-house. Simple threading. Universal tilting movement. Motor rewind, for use on A.C. or D.C. supply complete with lamp and motor drive for use on any voltage from 200 to 250 volts. 300-ft. empty reel and flex.

Please state voltage when ordering.

THE LATEST INTRODUCTIONS ALWAYS AVAILABLE.

THE ZEISS IKON SUPER NETTEL

36 pictures $1\frac{1}{2} \times 1\frac{1}{8}$
in. on standard ciné
film.

F/3.5 Zeiss Tessar anastigmat, metal self-capping focal-plane shutter, speeds 1/5th to 1/1,000th sec., and Bulb, automatic focussing, self-erecting front, all-metal body. Very small and compact. **£21:12:6**

Nine monthly payments of 50/6.

Fitted 1/2.8 Zeiss Tessar anastigmat. **£23:10:0**

Nine monthly payments of 54/10.

The "Westminster" Enlarging Easel De Luxe

(Registered Design)

NEW AND IMPROVED MODEL.

Showing front open for
receiving paper.

Salient Features.—Absolute rigidity. Rising and falling front. Tilting and rotating movement (spring ball lock for centring), special spring pressure board ruled for all sizes up to 15×12 , with special hinged glass front, supported by sliding strut, which leaves both hands free for placing paper in required position. Rapid in use. Accurate in register. Price. **£3:15:0** (Reduced Price)

Carriage Paid Great Britain. (A charge of 5s. is made for packing-case, which is refunded in full upon return of case.)

TOP LIGHTING

By D. SWAINE.

IT is said that rules are only made to be broken ; this can be applied to photographic rules on many occasions, and the results will fully justify the proceeding. It is a sound dictum that a subject should be lit from one side by a fairly low light, so as to bring out modelling and give a long shadow. I am acquainted with one photographer who never thinks of making outdoor exposures in summer between 10.30 a.m. and 4.30 p.m. But in thus arbitrarily confining himself to these morning and evening periods I am sure he misses many promising pictures.

My two illustrations, which I think prove my point, were taken about noon on a sunny day. The *motif*

*Cutting the Sunshine.*

in each is an effect of sunshine with a suitably balanced composition to form a foil and setting. The effect in each case is caused entirely by the extreme height of the sun, and is quite different from that which would be evident if the sun were lower in the heavens.

*The Sunlit Lane.*

From this it would seem wiser to be always on the look-out for pictures and have one's camera ready at all hours of the day ; it is a mistaken idea to be determined that at such an hour no good photographer could possibly work. For in both cases I had to snap quickly ; my yacht came into view round a headland, and the children passed into the lane suddenly from a cottage garden.

Surface-silvered Mirrors for Reflex Cameras

By BENJAMIN ALLWRIGHT.

FINDING it necessary about three years ago to replace the mirror in my reflex camera, I made enquiries at a large dealer's, and was informed that the cost would be about half a guinea ; the mirror, of course, being surface-silvered.

As this was more than I was prepared to pay I decided to try to make one. After silvering a piece of plain glass, I found that I was unable to polish the silver without removing part of it.

Eventually, after experimenting with pieces of mirror of various kinds, such as hand-bag mirrors, scraps of plate glass, etc., I bought a piece from the local glazier's cut to the size that I required, costing twopence-half-penny.

This I treated in the following manner and obtained an excellent surface-silvered mirror :

The mirror was immersed in methylated spirit in a photographic dish and left to soak for 10-15 minutes. By this time practically all the backing had come off leaving a bright, yellowish metallic surface. Adhering particles were removed with a piece of cotton-wool with gentle rubbing.

The surface was then carefully polished by rubbing gently with cotton-wool moistened with methylated spirit and dipped in jewellers' rouge.

The polishing, requiring ordinary care, took only a few minutes, and the result was a perfect silver-surfaced mirror. This was then washed well in methylated spirit and wiped with cotton-wool to remove the rouge.

Finally, the surface should be coated with a *very thin* solution of celluloid in amyl acetate.

This is important. When I first made

a mirror I neglected to protect the surface in any way, and in a few months it became black and had to be replaced. After trying various oil and spirit varnishes I found that very thin celluloid varnish was by far the best, and the resultant mirror was hardly affected by the thin film on its surface.

It should be noted that amongst the pieces of mirror that I used for experimental purposes, in one or two cases the backing would not loosen with methylated spirit, but came off quite readily with benzene ; also, in one of these instances after removing the backing there was another yellow varnish-like coating which I found came off easily with methylated spirit.

Only in one case did I have a failure ; I could not remove the undercoating of varnish except by friction, and this damaged the silver film.

Dinner-time.

FARMS and farm life have always an appeal as subjects for the amateur photographer. The live-stock and architecture of the farmstead, and the men at work, offer all-the-year-round possibilities, so that a visit at any time will yield interesting pictures. The present time is as good as any other period of the year for securing typical pictures of farm life. High-speed exposures are rarely necessary, therefore any simple camera worked intelligently within its capabilities is adequate for most farming subjects.

As the later autumn days approach, however, the light becomes poorer in actinic quality, and in the afternoon is distinctly yellow in character. For this reason panchromatic films or plates should be used, and preferably of the high-speed variety.

Assuming we want pictures—or at any rate well-arranged mementoes—flat lighting must be avoided, the background must show up the subject instead of absorbing it, and the composition should be as pleasing as possible.

In composing, the photographer should avoid trying to include too many animals or figures at one time, so as to make it fairly easy to prevent them wandering to the picture's edges. Where geese or ducks in water are concerned, they show up best when sky reflections can be avoided.

For subjects in action,

Homeward bound.

Field workers.

Photography

By W. PYE.

such as ploughing, harrowing or rolling, allow more space in the direction of motion, so avoiding the appearance of going "off the map." The suggestion of toil or effort can be secured by snapping the moment a start is made after a stoppage.

Broadside views of teams at work do not usually compose into pictures

so well as those taken approaching or receding at an angle of 30 to 60 degrees from the camera. This also helps exposure, for an object moving thus can receive three times as much exposure as one moving directly across the field of view. The legs of slow-moving animals move about four times as quickly as the body, and the exposure should be made

on a FARM

A good Autumn subject for picture-making.

when the feet are comparatively still.

Never approach too near your subject (horses, cattle, etc.) or your picture will show distorted perspective, particularly with short-focus lenses.

The farm workers play a useful part in picture-making when suitably

The poultry farm.

are beginning to fall. It is here that panchromatic material and a suitable filter will score, and will, in fact, be a necessity if the best results are wanted. A light tripod may prove useful for such work, but for the farm subjects almost any type of hand camera will be sufficient.

Finally, if the farmer helps you, thank him, and thank him properly, too, by sending him some prints. It will make it easier next time the farm is visited either by you or by a fellow photographer.

The last load.

introduced with their implements. Where the old idea of "standing still to have your photograph took" dies hard, a polite request to carry on with their job will obviate the stiff, unnatural pose they are accustomed to adopt. Whether the subject be live-stock only, or coupled with human interest, the aim will be to secure pictures which are characteristic rather than those which are exact records of actual things and people.

In the neighbourhood of the farm the landscape worker will also find many attractive subjects that will be at their best now that the leaves

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

DIFFICULT VIEWPOINTS.—II.

AS I was saying last week, there are many buildings, like St. Paul's Cathedral, of which it is impossible to get the most satisfactory photographic view. Obstructions make it out of the question. It is the same with other subjects besides buildings. Many a landscape would be ideal from a certain position, but that position is unattainable; or a view would be perfect, but for some obstruction or disfigurement which mars the whole thing.

Perhaps we shall come to regard electric pylons scattered about an open landscape with as much indifference as if they were sheep or daisies; and we may even in time sink as low as those Americans who consider they have vastly improved an imposing cliff by carving it into the semblance of some vulgar dollar-hoarder. Even as it is, we cannot but notice how increasingly difficult it is becoming for us to find a viewpoint from which the subject we wish to record can be shown at its best. The only thing we can do is to try our utmost to find such a spot if by any chance it exists.

Some time back I showed some photographs of the demolition of a London building, and told how a beloved demolisher shot a ton or so of dust and masonry over me and my Sibyl. On the site sprang up Unilever House, seen in the two prints here. In my opinion it is an impressive and beautiful building, and is not difficult to photograph from several positions. One of the best aspects of it is from a window on the other side of the river, high enough up to dodge intervening buildings and advertisements. But it is not high enough to dodge a beast of a factory chimney—a "stalk," as it is pleasantly called in the North.

So I proceeded to spy out the land; and leading from a side street I discovered a narrow alley-way which led right to the water's edge; and there was a wooden bar to prevent my falling into the river, and to serve as a convenient support for my camera. It was just the viewpoint I wanted.

Here I would ask you to notice the differences between Fig. 1 (above) and Fig. 2. They were taken from the same spot; there was no room to dodge about, the alley being only about a yard wide. The main difference

between the two renderings is due to a slight swing of the camera, and this is a most important point to bear in mind. Viewpoint is not only a question of the actual stance, but of the direction in which the lens is pointed. Even a slight movement one way or the other will often make a vast difference in the composition.

In Fig. 1 two buildings are shown side by side. If it was necessary that the record should include the two buildings, well and good; but it undoubtedly leads to division of interest, and in many kinds of pictorial work this would be fatal. In Fig. 2 the one building is dominant, and the fact is disclosed that the building is close to one end of Blackfriars Bridge. Of the two I much prefer this.

Then, again, this viewpoint being about right on general grounds, there was the opportunity of waiting for passing craft, which came along at intervals. I should have liked something a bit nearer, but conditions

were not favourable, so I had to make the best of what offered.

And another important thing—the lighting. The viewpoint found may be the best for the aspect and arrangement of the subject, but not the best for the lighting, except at certain times. Taking this one building, for example, there is part of the day during which the sun shines full on the sweeping front, which is then too uniformly white. Later on the light falls as shown in the photographs; and still later the whole front is in shadow.

So that there is a good deal to be done and thought of in getting the best viewpoint. The everyday subjects to which I have referred are unimportant; it is the general ideas that must be borne in mind, for these apply to a greater or less extent to practically every photographic subject with which we may deal.

W. L. F. W.

WATCH THE BACKGROUND

WHEN the negative of this print was developed and I saw the figure in the background, it seemed impossible that I could have had no knowledge of what was passing in the background when I made the exposure, but it was so.

My model was contentedly dropping handfuls of sand into the pool, and so absorbed did I become in watching, ready to snap at the right moment, that I became oblivious to near-by happenings. This occurred some years ago, and it is unlikely ever to happen again, because from this I learnt a valuable lesson. It is one that every beginner in photography, particularly when taking snapshots, should remember on every occasion—always watch the background.

When photographing on the seashore or in the street I have trained myself to keep one eye on the subject and

Not an ideal background.

By "KIN."

the other on surroundings, particularly the background. This is a useful accomplishment, and should be learnt by all who like to use their cameras on subjects which include moving figures in different planes.

A sharp look-out should also be kept for buildings, telegraph poles, lamp posts, trees, etc., that are in the background, and may come in awkward positions in relation to figures in the foreground.

The subject should be visualised, either directly or in the finder, as a completed picture or print, and all parts seen in relation to each other.

It is good training to do this on every occasion, even if no exposures are made. And notice must be taken of the fact that we may be misled by objects which are clearly on widely separated planes, yet which come into unpleasant proximity in the print. We must watch the background.

DO NOT WAIT TOO LONG

THAT it is unwise to rush impetuously into action with a camera when a good subject is seen, has often been proved very true. But while it certainly pays to study the proposed picture from different angles and wait for the best moment, this waiting can be overdone. The result is disastrous to one's peace of mind!

I want to put forward the plea that photographers considering subjects over which they have no control, should release the shutter at the first possible moment. If the composition is anything like suitable in the disposition of its parts, take it. Should the conditions or arrangement of moving objects become absolutely perfect a

moment later, take another; it is better to have the two than nothing.

Not long ago I had all ready for taking a picture which was to include a fine pair of white farm horses which had been making regular turns up and down a field, in a plough. I almost took my photograph on one turn, but decided to wait for the next, which would bring them into a perfect position. The next turn never came; instead, the team went off to the farm, and I went away very disconsolate.

But it is in attempting pictorial compositions in the streets of small towns and villages that vigilance is required. I have several times been robbed of a picture by waiting too

By D. S.

long for figures to move into perfect positions. The not-so-perfect figure would have pleased me better than nothing, for this is what can happen.

I waited three years—perhaps thirty visits—for appropriate foreground interest to be present in a certain village square; last week my patience was rewarded. A man with a horse and cart passed from house to house as refuse was collected. Excellent! The light was right, and my subject was slow-moving or stationary. I would snap at the next stop. Alas, this was opposite the inn, and round the corner swung a huge brewer's lorry to pull up where the horse and cart should have been.

How I make my EXHIBITION PICTURES

No.
CCXLVII.

Mr.
STANLEY
SCHOFIELD.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"IT is difficult to explain within the limits of a short article how I make my exhibition pictures, as in my opinion practically every subject demands individual consideration and treatment. The only thing I can do is to sum up the general principles on which I work.

"I always aim at keeping the composition of a picture as simple as possible; I strive at the best technique; and I endeavour to ensure that the picture shall tell

its own story. By the last, I mean that the various parts of the picture should not only be linked together in the composition, but they must also have some definite connection in the imagination. Take, as a simple example, the print, 'Down to the Sea,' on this page. This at a glance conjures up in the mind an affinity between the steps in the foreground and the boats beyond, and the title emphasises this. The print on the opposite page also tells its own simple story, and the low key in which it is rendered helps to strengthen the rather solemn character of the subject as it presented itself.

"For this type of pictorial work it is necessary to have a large-aperture lens, in order to get, when required, a shallow depth of definition, so that interest in any given portion of the subject can be stimulated by its being in sharp focus while the remaining portions are rendered less obtrusive and insistent by a certain amount of diffusion. For such effects, calling for critical selective focussing, I find the reflex camera without equal, and I consider that quarter-plate negatives are the best size for serious work. But as the bulkiness of this camera renders it impracticable to carry it with me on all occasions, I invariably carry in my hip pocket a miniature camera loaded with 'Panatomic' film, so that if I come across an unexpected picture I can record it in a moment.

"For my reflex camera I use Kodak super-sensitive panchromatic cut film, but usually without a filter, as I find that aerial perspective in landscapes is liable to be somewhat lost if a light-filter is used. For my exhibition prints I use Kodak Royal, Kovita or Kodapal.

"The mounting and finishing of the print are by no means the least important factors in turning out satisfactory exhibition pictures. A visit to any photographic exhibition will generally reveal a certain number of otherwise first-rate pictures simply ruined by bad mounting, careless spotting, and so forth. I therefore finish all my work as carefully and neatly as possible. I also endeavour to select a simple and expressive title that harmonises with the subject and enhances its appeal."

DOWN TO THE SEA.

Stanley Schofield.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

NOTWITHSTANDING the fact that No. 1 of the prints reproduced on the opposite page—"Windswept," by G. F. Brewitt—is of excellent workmanship and exhibits a fair idea of arrangement, it seems somewhat disappointing if considered in relation to its title. It suggests a mood that is more characteristic of quietude than of storm, which is what its title implies.

Subject and Title.

In order that the title may be sustained, the subject should, either in mood or the disposition of the subject material, convey a feeling of the effect that is produced when a wind exists.

Here, however, nothing of the sort is suggested. It may even be the case, in actual fact, that there was quite an appreciable amount of wind when the exposure was made; but, while it is not visible in itself, its effect on the objects composing the subject material—trees, shrubs and clouds—could be seen, and something of this effect should be conveyed in the print.

This is by no means easy to accomplish unless it is possible to include something that is obviously under the influence of wind, as, for example, a figure with flowing garments, or unless the lines of the subject are such as to convey the impression that the objects are similarly affected.

In the first case, the influence is suggested by a departure from a normal shape. That is to say, the garments of such a figure, instead of falling vertically as usual, would be extended in the direction the wind was blowing, and the degree of extension would afford an indication of its strength. In the alternative, a similar impression must be suggested, and, to enable this to be done, it is necessary to have some idea of the influence of line.

Lines of Movement.

There are, of course, exceptions to every rule, but, speaking generally, horizontal or vertical lines alone, or a combination of both, are static in the impression they convey.

They suggest a sense of peace and quietude or absence of movement, whereas slanting lines convey a feeling

of action or motion. If, therefore, a picture contains a preponderance of horizontal or vertical lines, its mood is quiet and peaceful, and, if a majority are definitely on the slant, there is a suggestion of movement.

The most pronounced lines in "Windswept" are those of the trees in the foreground, and the horizontal line where landscape meets sky. Neither shows a sufficient departure from the true vertical or level to do other than provide a static impression. The clouds, it is true, are of an inclined direction, but their influence is not strong enough to counter the dominant impression of the tree and horizon line. On this account, and because the title implies movement, subject and title are not concordant.

In certain parts of the country—near the sea and in areas similarly exposed—the force of the prevailing wind causes isolated trees and small collections of them to grow in a twisted formation, and more or less on the slant. With one of these as the most prominent object; a landscape that shows a pronounced slope against the sky, and the sky itself with clouds of marked formation having a definite departure from the level or vertical, it might be possible to make up a picture that would live up to such a title as "Windswept," assuming, of course, that such lines are arranged to form a harmonious composition.

Directional Impulse.

A picture so made up should not only convey an impression of wind, but an indication of the way it is blowing, and, if it should be the prevailing wind, little difficulty should be experienced. If the line of sight is across its path—as it must be to get the tree or trees at the right angle—the line assumed by the clouds will incline upwards in more or less the same direction as the trees.

The line of the uppermost edge of the landscape might run in a counter or the same direction. It would not matter a great deal, for the dominant lines of trees and sky would combine to suggest what is known as a directional impulse.

None of the examples shown on the

opposite page this week gives an idea of the sort of thing that is in mind, but No. 4, "Heather Terrace," Tryfaen," by A. R. Serrailter, provides an instance of the unrestful tendency imparted by the presence of a strong sloping line.

Rest and Unrest.

Nevertheless, there is little suggestion of movement, principally because the directional impulse of the hillside is countered by the opposing tendency of the lines of the clouds and that of the mountain.

Nor does it seem to be needed either to satisfy any implications of the title—which has none—or any essential feature of the subject. On the other hand, there is an indication in the title of No. 2, "A Quiet Backwater," by W. G. Halliday, which is amply sustained by the impression conveyed by the print. The main lines here are horizontal and the secondary vertical. The feeling suggested, therefore, is one of rest and peace, and the direct opposite of the impression conveyed by No. 4.

A similarly static suggestion is imparted by Nos. 3 and 5, "Evening, Fountains Abbey," by Miss F. Blythe, and "The Way Across," by H. N. Russell.

In both these cases, the predominant lines are horizontal, though, in the latter, the feeling is to some extent impaired by the sloping lines of the prominent boughs.

Dignity and Height.

A preponderance of vertical lines, such as is displayed in No. 6, "Tropical Palm," by S. H. Kwa, in addition to the static impression, has the effect of suggesting dignity and height.

In this case, that effect is heightened by the vertical shape of the picture and by the fact that the line contains the brightest light almost throughout its length. The way this tone is shown up against the darker sky is very well managed indeed, and, in point of fact, all the prints this week which include the sky show an appreciation of the value of a proper tone therein—in which respect a not inconsiderable advance over the average standard is attained. "MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"IN A CORNISH HARBOUR," by F. J. Mortimer.

IN its rendering of an aspect of harbour life; in its presentation of a group of sea-gulls in their natural haunts; and in its fine display of an effect of sunshine upon their plumage, this picture is undoubtedly attractive. It is also interesting, by the way, in the fact that it is an enlargement from a negative taken by one of the real miniature cameras of to-day.

Exhibition Work.

The original, from which the reproduction is taken, is a 20x16 in. print from a portion of a negative about the size of a postage stamp, and is on view at the exhibition of the London Salon of Photography, now open at 5a, Pall Mall East, London, S.W.1.

Seen from a reasonable viewing distance, there is nothing from which the really enormous degree of enlargement could be inferred. There is no suspicion of grain; the image is perfectly sharp, except, perhaps, where a slight degree of movement in the wings of the birds is just perceptible; and the tonal rendering is in every way equal to that which could be obtained from a negative many times the size. Technically, the print is an achievement, and it is also a tribute to the efficiency and accuracy of the instrument employed, just as much as it is to the skill and capacity of the man behind it.

Possibly, the success which the work achieves is partially attributable to the fact that the subject is one of a series of exposures made in rapid succession, an expedient to which the type of camera in use lends itself admirably. In the case of a larger instrument, changing is a much longer operation, and, where a succession of exposures can be made with negligible loss of time, the chances of securing a successful result are appreciably increased.

The best of the series can be selected at leisure, whereas, if the result is dependent upon a single exposure, the

probability is that the scene at its best will be missed and something occur that will either involve a certain amount of after-work or the inclusion of something that would better be avoided.

A Circular Composition.

Here, not only is there nothing that can be dispensed with, but the

degree of unity. It is desirable that, within that area, one point or series of points should present a supreme attraction, in order that the group may seem finished and complete. Otherwise the interest would be dispersed over too large a proportion of the picture space and its attraction correspondingly impaired.

Such an unfortunate state of affairs is obviated in this particular instance, for the bird (1) is definitely the principal point of attraction. It has a not inconsiderable power of placing; its position upon the periphery of the circle enhances its importance, and its significance is emphasised by the fact that it forms as bright a note as any other in the whole thing. Its principality is still further stressed by the contrast of that brightness against the dark—the deepest tone in the picture—of the hull of the nearer of the two boats at the top. It therefore serves its required purpose in rounding off the group; in ensuring the needful degree of unity in the picture as a whole; and, because of its brilliance of tone, it lends point and value to the suggestion of an effect of sunshine.

Depth and Perspective.

That, of course, provides the pictorial motive, and the picture itself shows how well it is conveyed, nor is it such as to need any further explanation.

It is self-evident and self-explanatory, but, as it is possible that the contention might be advanced that the lines of the rigging which run across the picture from the top towards the bottom right might be regarded as interfering with the full enjoyment of the motive, it may be mentioned that such an objection could not be sustained, for the lines in question enable perspective to be suggested. The viewpoint was evidently selected carefully and the lines retained deliberately.

They provide an illusion of relief, which, in the original, is almost stereoscopic in effect. "MENTOR."

form the composition assumes—always a difficult thing to control in subjects of this character—is agreeable and pleasing. It is circular in shape, and suggested by the imaginary line formed by joining up the various points provided by the birds at the edge of the group. This formation is indicated on the accompanying sketch by dotted lines, and, as will be seen, it has the effect of limiting the interest to the area which is enclosed.

A certain measure of concentration is so secured, but, while that is good as far as it goes, it is scarcely sufficient in itself to ensure the necessary

The Clerical Side of Free-Lancing

By "FLEETWING."

THE clerical side of free-lance Press photography is often sadly neglected, due perhaps to the excitement of seeing one's prints in the picture pages of the newspapers, a thrill which I think never fails to give pleasure, however long one has been free-lancing.

Slipshod methods always lead to confusion sooner or later, and a few minutes' work with the pen when dispatching photographs to the editors will not be wasted. Confusing accounts are not kindly dealt with in newspaper offices, and may result in financial losses to the photographer if he relies too much on his memory.

A book should be kept, and kept up-to-date, ruled out and including the following headings: "Subject," "Date of dispatch," "Name of paper, etc.," "Date published and page number," and, in the event of rejection, "Date returned." A column for "Date paid" will prove of use.

These headings will enable the photographer to make out his accounts correctly and without loss of time. They will also assist in searching the papers for possible reproductions when several photographs have been issued all round.

Photographs which have been published should be cut from the newspapers and retained. A good idea, which I have always found useful, is to paste the cuttings in an album. Cheap photographic albums are ideal for this purpose, and can be obtained

from the leading London stores for about a shilling each, and large enough to hold a considerable number of cuttings.

Photographic paste of a well-known make will not injure the newspaper

as a useful guide for reference. All free-lances strike slack periods, when nothing goes right and the postman brings those neatly printed notes commencing "The Editor regrets, etc." A glance through the album

on which the photographs are printed. The name and date of issue of the newspaper should be typed or written on or under the print.

Apart from keeping one's results neat and protected, this method, if carried out systematically, will serve

gives the photographer confidence and courage to go forward and repeat those successes resulting in further reproductions and remuneration.

The accompanying photograph shows a few leaves from an album and how it should be made up.

The Week's Meetings

Wednesday, September 19th.

Camberwell C.C. Table-top Photography. C. Howard.
Hucknall and D.P.S. Newtown Linford.
Partick C.C. Receiving date for Prints for Criticism.
Rochdale P.S. "Pictures I have made this year." J. C. Wild.

Thursday, September 20th.

Middlesex P.S. "More about Movies." H. L. Wallis.
Nottingham and Notts P.S. Newstead Abbey.
Oldham P.S. Lantern Slide Postal Club Slides.

Saturday, September 22nd.

Bath P.S. Bathampton and Tea at "I-Kaya."
Beckenham P.S. Bankside and the R.P.S. Exhibition.
Bristol P.S. Leigh Woods. Meet at Suspension Bridge, 3 p.m.
Exeter C.C. Exmouth.
Hackney P.S. River Roding.
Hull P.S. Hedon and Paull.
Ilford P.S. Upminster to Ockendon. Meet at Ilford Station, 2.30 p.m.
London County Council Staff C.C. London Outing.
Luton and D.C.C. Lilley to Hexton.
Nottingham and Notts P.S. Clifton Hall and Village.
Oldham P.S. Marple and District.
Photographic Society of Ireland. Kenure Park, Eden Quay, 2 p.m.
Plymouth Inst. P.S. Mt. Edgumbe Park.
Sheffield and H.P.S. Lodgemoor to Rivelin.
Sheffield P.S. Chesterfield.
Small Heath P.S. Fillongley.
South Suburban and C.P.S. Westerham.

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session, or from time to time.

Saturday, September 22nd (contd.).

Walthamstow and D.P.S. Wake Arms to Theydon. Meet at Wake Arms, 3 p.m.
Stafford P.S. Colwich.

Sunday, September 23rd.

Camberwell C.C. Aylesford and Loose Valley.
Hanley P.S. Chester.
Leigh Lit. Society. Chester and Delamere.
Medway A.P.A. The Pilgrim's Way.
South London P.S. Aylesford and Loose Valley.
York P.S. Alum Pot and Ling Gill.

Monday, September 24th.

Bournemouth C.C. Annual General Meeting.
Southampton C.C. Competition Evening.
South London P.S. Visit to R.P.S. Exhibition.
Walthamstow and D.P.S. Annual General Meeting.

Tuesday, September 25th.

Manchester A.P.S. Lantern Slide Postal Club Slides.
Nelson C.C. Slide Competition.
St. Bride P.S. "Street Scenes" Portfolio.

Wednesday, September 26th.

Camberwell C.C. Jumble Sale.
Luton and D.C.C. Lilley to Hexton.
Partick C.C. Print Criticism.
Rochdale P.S. Night Photography.
Stockport P.S. "Finishing the Exhibition Print." Mrs. Satterthwaite.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

SKY FILTERS.

SIR,—I would endorse that portion of Mr. J. H. Barnett's letter in a recent issue of "The A.P." to the effect that anyone who draws the paths of the light rays can see the effects of the sky filter, but the paths must be correctly drawn.

I enclose herewith two elementary diagrams showing the effect of a sky filter (a) behind the lens, and (b) an equal distance in front of the lens at $f/2$ in Fig. 1, and $f/10$ in Fig. 2, from which it can be seen:—

(a) For an object at infinity, the difference between the two positions is negligible in practice.

(b) At $f/10$ the uppermost part of the object is completely corrected and the lowest part completely uncorrected.

(c) At $f/2$ the upper part is more corrected than the lower part.

(d) With the filter behind the lens, a "hard line" separation between corrected and non-corrected portions is obtained only when the filter is in the focal plane, and this is not desirable.

(e) The ratios to be taken into account involve separation of lens and filter, focal length of lens, and aperture. The distance of the sky being practically infinity, it cannot be, and need not be, taken into account.

(f) For objects closer than the sky the ratio of correction between upper and lower parts is slightly increased, but the use of a sky filter for such objects is rarely necessary.

(g) For sky and near foreground, the proportion of correction of the foreground is decreased by the coning of the rays, and still more so by the smaller aperture required to give depth of definition.

(h) The sky filter only operates as a complete filter of average density when it coincides with the optical centre of the lens.

—Yours, etc., A. WHITTEN BROWN.

THE PERFECT CAMERA.

SIR,—Now that Ihagee "Exakta" reflex camera has appeared with a great improvement in its shutter speeds, i.e., from $\frac{1}{2}$ to $1/1,000$ th sec., the ideal camera is nearly approached. Thanks to Dallmeyer—they supply an $f/1.9$ Super Six lens. The camera with 7.5-cm. focal length and $f/1.9$ lens makes night snaps comparatively easy on S.S. pan-film. There is also the Telephoto lens to suit it. It has various finders, optical direct, wire-frame, and reflex, which are a great advantage for all-round photography. But this camera, with all its facilities, is lacking one great thing, and that is a plate-back. If this were to be introduced (of course, it should be a revolving plate-back), I am sure not only more amateurs (from more advanced downwards, including myself), but also professionals, would go in for this type of camera.—Yours, etc., T. V. KANNAN.

(India.)

SIR,—I have been interested in the correspondence *re* the "perfect" camera, and ultra-small cameras. The latter, with their numerous gadgets and ingenious focussing arrangements, appear to me quite unnecessary. The depth of focus is so great in miniatures that focussing is practically foolproof.

Simplicity, size and cost is in my opinion the keynote to the "perfect" camera. I recently acquired one of the new Ensign Selfix "20" cameras, with an excellent $f/4.5$ lens of 4-in. focus, at 70s. It is all I could wish for really quick work, ready in an instant, well designed and finished, and extremely rigid. It compares favourably with foreign makes at a much higher figure.

I have no interest in the Ensign makers, except that they are British. My only desire is to pass on the opinion of a photographer of thirty years' experience. With best wishes.—Yours, etc., IFOR B. EYNON.

DEVELOPING TANKS.

SIR,—There is still room for a really foolproof roll-film tank, notwithstanding the various new devices which are appearing on the market.

The circular tank with apron is, to my mind, the best so far, but the celluloid apron is fragile, and one can only eliminate airbells by vigorous tappings and violent movement for the full ten or twenty minutes of development.

The circular tank with a spiral arrangement into which the film has apparently to be pushed—in the dark—would be excellent if it were not for the element of friction which effectively defeats all efforts to insinuate more than a foot of film at most.

I incline towards a long "tray" to take the whole length of film, and a light-tight and liquid-sealing cover.

The one difficulty to my mind would be the prevention of the film from adhering to whatever "mattress" was employed for the film to rest upon. Possibly a strip of perforated celluloid would do—or some sort of gauze. The fewer parts the better.

It would be very interesting to have readers' opinions on the subject of tanks.—Yours, etc., L. LONGFIELD.

A MINIATURE CAMERA.

SIR,—From the way in which your correspondent, Miss Minnie A. Chure, trails her skirt it is evident that I have not fully explained my meaning. I charged the ciné film miniature cameras with being too small, too heavy, too expensive, and too difficult to use.

My contention is, and I admit that it is based on theory only, that the tendency towards the miniature is a natural one, that if a really good camera, preferably with coupled range-finder, were made for the vest-pocket size it would be as small, and have nearly all the advantages of the ciné film size with great advantages in certainty in use. I admire the Leica and Contax cameras immensely, and would buy one if I were convinced that the size is not too small. But I am not, and I urge the superior claim of the 16 on "120" film.—Yours, etc., R. E. DICKINSON.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Notes on Panchromatism and Ciné Interiors

By S. E. L. M.

The behaviour of panchromatic emulsions is not constant for daylight and for artificial illuminants as well. Notes on the various differences which may be experienced are contained in the article which follows.

OWING to their paramount suitability for almost any phase of indoor cinematography, panchromatic, and especially super-speed panchromatic, emulsions enjoy the greatest measure of popular favour at this time of the year. But they require especial care in handling—or results may be worse instead of better than usual.

In the first place, there are several exposure adjustments to be made. When the lighting used is the ordinary indoor illumination, for example, they may be from two to five (or even more) times as fast as they are to daylight of the same intensity; and normally, of course, they are appreciably faster than the fastest makes of non-panchromatic film.

And it is in connection with these things that the greater bulk of exposure adjustments will have to be made.

Unrecognised Assistance.

Further adjustments will require to be made through the presence of helpful factors that are not at first easily recognised. These include walls, ceilings and other adjacent surfaces. Such surfaces are of far greater assistance than is generally realised, and if properly employed they may be made to reflect as much as thirty per cent of the original light used. In these circumstances, then, it cannot be marvelled that efficient reflectors are quite legitimately regarded as a further source of illumination.

Owing to the great variety of such factors, and their immense influence on panchromatic cinematography, it is essential to take accurate meter readings far more frequently than would suffice in the case of exterior work on ortho or even on panchromatic stock. (One instance is on record where the *measured* exposure on an interior dinner-table set was quite upset by the moving of a Korean folding screen used in the action itself. In the retake, readings were carefully taken, first with the screen in position,

and then after its removal, the lens stop being altered actually during the filming.)

It might be advisable here to mention the need for acquiring a reliable type of meter where the present model is apt to be influenced by the personal equation or, indeed, by any factors, apart from those immediately concerned with the light to be read. Most meters of the photo-electric type fall into this category; and in view of the many complications attendant on present-day cinematography, I regard them as the only real solution to the amateur's exposure problems.

Filters.

The question of filters is one which need not be included amongst these

complications, but it is one which nevertheless has tremendous bearing on the subject of filming ciné interiors. First and foremost, let me say that in practically every case it is extremely unwise to use the familiar light filters at any time during interior shooting. Their effect is at once to cut down the exposure value of the light employed—poor enough in a good many of the more modest cases—and to create a flatness of image that is not at all required in the circumstances concerned.

Readers anxious to remind me that filters are occasionally used in some of the well-equipped professional studios will appreciate this point better when I say that the kind of light used in these places approximates to daylight much

The Bracken Harvest, now in full swing. A further example of a simple action subject of country life to form part of a series of educational and record films referred to last week.

more closely than does the light which most of us are accustomed to using on our own interior activities.

Nor should we forget that amateurs and professionals alike sometimes make use of *over-correction*—on which occasions it would be permissible and even necessary to make use of suitable filters.

The fact that light filters are not recommended for interior filming need

not prevent the enthusiast from enjoying the fullest benefits of colour correction, for even in the normal course of events the light used does not contain that super-abundance of violet-blue which makes it necessary to use a filter.

An even greater degree of correction is possible where *panchromatic* carbons are substituted for the more

orthodox variety in arc lighting—and this without need for increasing the number of arcs.

Apart from these considerations, a high degree of colour correction is possible through the use of green, yellow and amber reflectors in conjunction with ordinary incandescent lighting; but in all cases panchromatic stock must be used.

Write Family Scenarios Now By R. H. ALDER.

THE winter months are approaching; summer films are all edited; Christmas decorations and snow are still to come. The exposure meter will soon show impossibly large apertures.

Genius like Chaplin "shoots off the cuff." This is all very well when there is a studio, hordes of staff, a wealth of material and a lifetime of experience. Such improvisation is not for the amateur, who usually finds that he never has "the time, the place, the loved one" and the light and the camera all together.

"Real" Life Stories.

Certainly one cannot invent artificial stories beforehand—family scenarios must be real. The baby on the lawn is no creature of the imagination, but a very stern reality. The scenarist who tries to treat baby as a puppet is in for a thin time, especially as mother will be there.

There is, however, no need to invent—the past provides a wealth of stories. We live our lives over and over again—one day is very like another—our surroundings may alter, but we ourselves go on unchanged.

To make a film entitled "Saturday Afternoon," we can take outstanding incidents from the Saturdays we have

spent and weld them, with due regard to tension and climax, into one story. Sooner or later the opportunity of filming each of those incidents will come again.

To preserve the air of reality shots must be selected carefully, choosing habitual actions. Whenever the director tries literally to "direct," camera consciousness steps in.

Often a family sequence starts with a title such as "During the afternoon father, mother and Elsie took the dog for a walk." Then follow medium shots of a self-conscious family attiring themselves, coming out of the door, passing down the garden path and out of the gate.

Habit is Natural.

Imagine by way of contrast, the following: (1) Fade in on clock at 3.15; (2) Angle shot of father leaning out of window, shouting; (3) Subtitle, "What about a walk?"; (4) Short closer shot of father at the window.

Then comes (5) Semi-close of Elsie dancing with glee; (6) Mid-shot of mother putting sewing away; (7) Close-up of the dog, alert and expectant; (8) Close-up of Elsie's hands, hastily lacing boots.

Finally, (9) Semi-close of the dog, pawing at the inside of the door until

it starts to open; (10) Ground-level shot, outside, of the door opening and the passage of the dog followed by three pairs of feet.

Every one of these actions—except, perhaps, father's—is habitual and therefore natural. The bulk of them are in close-ups, because a friend is remembered not as a whole, but as a collection of individual mannerisms. The function of medium shots in family movies is merely to link together the close-ups.

The shooting-script is fully detailed; from the very beginning the editing must be kept in mind. All the incidentals are noted—their enormous value for continuity may be learnt from abstract and documentary films.

These little shots must be seized when they occur and therefore must be clearly defined in the mind from the beginning.

Something in Hand.

Don't stop at one scenario; it is worth the effort to keep two or three on the stocks. The shooting may be spread over some months. In one family it would be possible to shoot in the course of a summer four distinct scenarios such as "Wax Doll and Golliwog," "Tea Time," "Party Dress," and "Picnic."

The Brondesbury Ciné Society are holding a projection evening on the 5th and 6th of October, at 8 p.m., at their headquarters, 100, Chamberlayne Road, Kensal Rise, N.W.10, and they invite any amateur or club to come along and criticise a new film they have made. They will be glad to have their visitors' opinions, and there will be no charge. At the same time, they are officially opening their new projection theatre and studio. The club will welcome anyone interested in amateur cinematography, but as the number of seats is limited, they ask readers of "The A.P." to apply for free tickets immediately. Application should be made to B. Ludin, 134, High Street, Notting Hill Gate, W.11.

The Exhibition of Cinematography organised by the Royal Photographic

Society will be opened at the Society's House, 35, Russell Square, W.C.1, on Tuesday, November 6th, and will remain open until Friday, November 30th. As previously mentioned in our reference to this event, the display will comprise apparatus, "stills" and films, and a feature of the exhibition will be a series of lectures on various aspects of cinematography, with projections of films. In conjunction with the exhibition, a sub-standard film competition, for films not previously submitted to competition, will be held, open to amateur and professional workers alike. There is a class for amateurs only, in which entries will be limited to films not exceeding 100 ft. 16-mm. silent, or its equivalent in other sizes. Films accepted by the judges will be shown during the period of the exhibition, and will be awarded certificates. A plaque will

also be placed at the disposal of the judges for the most meritorious film submitted in each class. In the meantime, readers of *The Amateur Photographer* who wish to enter the sub-standard film competition should apply to the Secretary, Royal Photographic Society, for a copy of the entry form with rules. Entries must reach the Royal Photographic Society on or before October 1st.

Owing to the success of the Midland Salon of Photography, of which a notice appeared in *The Amateur Photographer* last week, the Director of the Nottingham Castle Museum and Art Gallery has requested that the exhibition closing date be postponed for an additional week. The exhibition will, therefore, remain open until September 22nd.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Again this year the Royal Photographic Society have issued their annual publication, "The Year's Photography." This contains over fifty pages of reproductions in photogravure of prints and lantern slides from the Society's Annual Exhibition, which is now open at 35, Russell Square, W.C.1. The reproductions are admirably done, and give a very good idea of the work in the exhibition. It should be obtained by all those who are unable to visit the show, while those who do see it should secure this attractive souvenir. Articles by H. B. T. Stanton, J. Dudley Johnston, Ian M. Thompson and Edwin P. Jelley, dealing with different sections of the exhibition are also included. The price of the book is 2s. 6d., and it can be obtained through photographic dealers or booksellers, or ordered from the Royal Photographic Society at the address given above.

The photographic classes at the Cripplegate Institute, Golden Lane, E.C., will start for the winter session on Wednesday, October 3rd, at 6.30 p.m. Readers of *The Amateur Photographer* who join these classes will find all facilities available for helping them in their practical work and technique. The subjects dealt with are comprehensive, and the instruction is given by Mr. John H. Gear. A special feature will be the use of modern miniature cameras and practical applications of the small negative. Application to the Manager of the Institute at the above address will secure full particulars.

The army of Rolleiflex camera users will be interested to hear that "The Rolleiflex Book" is now available—a translation by John L. Baring from the German of Dr. Walther Huring. We understand that in eighteen months 15,000 copies of the German edition have been sold, and we shall not be surprised to learn of an equally large sale in this country. It is a complete and lucid exposition of the camera, its manipulation and uses, and the illustrations are exceptionally good. The continual reference to Scheiner speeds is rather unfortunate, but this is a minor point in a book so packed with valuable information. The price of the volume is 6s., and if there is any difficulty in obtaining it from Rolleiflex stockists, application as to the nearest source of supply should be made to the sole wholesale distributors, Messrs. R. F. Hunter, Ltd., 51, Gray's Inn Road, London, W.C.1.

A new top focussing screen for reflex cameras has just been put on the market by the Thornton-Pickard Manufacturing Co. Ltd., of Altrincham. This is a patented invention and will be known as the Stevens Screen, after the name of

the inventor, who has discovered that a top ground-glass screen cut from a plano-convex lens with the flat side ground and placed downwards in the place usually occupied by the ground glass in the reflex camera gives a much more brilliant image than the ordinary flat ground glass. We have examined one of these screens in a reflex camera, and it is at once apparent that a very considerable gain in the brilliance of the image occurs when using the Stevens Screen. In addition, there is a definite suggestion of magnification given by its construction which adds appreciably to its utility. Messrs. Thornton-Pickard are now able to supply their most popular form of reflex camera, namely, the $2\frac{1}{2} \times 3\frac{1}{2}$ revolving back model, with the Stevens Screen, which can not only be fitted to reflex cameras as they are purchased, but also to practically any old model reflex camera without any alteration being made to the camera, the old screen being simply lifted out and the new one fitted. These screens are supplied as an extra to the Thornton-Pickard revolving-back reflex camera at the additional price of 21s., whether fitted to a new camera or an old one.

We hear from the Regent Exhibition (organising "Advertising of To-day and To-morrow"), which was due to be held at Bush House, Aldwych, that owing to the heavy letting of space for the requirements of the exhibition, the larger premises of Dorland Hall have been secured, and this has meant postponing the date of the exhibition until December 12th-22nd. The extra time at their disposal will enable the organisation to develop two new sections for the exhibition, (1) original work by famous creative individuals, and (2) important advertising developments. Full particulars of the exhibition are obtainable from the Secretary, Regent Exhibition, 19, Buckingham Street, Adelphi, W.C.2.

At the Borough Polytechnic, Borough Road, S.E.1, the new winter session is just starting, and the classes devoted to photography are again covering a very wide range of subjects in practical and theoretical work. The course on Mondays gives an excellent training in the art of portraiture and retouching the resulting negatives, and the finishing of enlargements—a most valuable course for those desirous of taking up professional studio work. The classes on Fridays instruct in all branches of practical photography, and are suited both to the beginner and more advanced worker. Reduced fees are available for those learning the business or under eighteen years of age. The instructor at these classes is Mr. Robert Coombs, to whom application should be made, or to the Secretary at the above address.

Working instructions for Agfacolor Roll Film, Film Packs and Flat Films have been issued by Agfa, Ltd., 1-4, Lawrence Street, High Street, W.C.2, in the form of a remarkably well produced little booklet, giving full details and all practical instructions for producing colour photographs with these materials. Copies of this booklet can be obtained on application to the address given above.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 29. Rules in the issue of August 29.

Seventh International Photographic Salon of Japan.—Open, (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6. Secretary, 53, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6. Secretary, 35, Russell Square, London, W.C.1.

P.P.A. Annual Exhibitions, Royal Institute Galleries, 195, Piccadilly, W.1. "Modern Portraiture," open, September 19-29. Secretary, A. F. Bucknell, Sundial House, 357, Euston Road, N.W.1.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17-20. Secretary, E. George Alderman, Ruardeen, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9E).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakow.—Open, August 26-September 30, 1934. Secretary, Fotoklub Polskiej, Y.M.C.A., Krakow, Krowderska, 8, Poland.

Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26-December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 19; open, December 10-15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography, Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid, Spain.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, October 6. Particulars from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Securing Clouds.

Can you tell me why the clouds have not come out in the enclosed negative? The clouds were dark and patchy, and I used a pan. film and a four-times filter. B. G. B. (Broadstairs.)

Judging from the negative we can only conclude that it was over-exposed for the clouds, and subsequently over-developed. It is not always possible to secure clouds unless they are strongly marked and of sufficient contrast, but in nearly every case clouds are more or less lost by too prolonged development. It does not follow that panchromatic film and a filter will help with all kinds of skies. Much depends on the colour. With shades of grey an ordinary plate without a filter is quite capable of rendering the clouds properly, given suitable exposure and development.

Anastigmat.

What is the meaning of the term anastigmat lens? N. S. S. (Forest Hill.)

In optics, astigmatism indicates the inability of a lens to give sharp definition of vertical and horizontal lines at the same time, especially near the edges of the circle of illumination. An anastigmat lens has been corrected so as to eliminate this defect.

Exposures.

Will you kindly give me the correct exposures for Switzerland? A. E. (Westcliff.)

The question you ask cannot be answered in any useful way. Any given exposure depends upon time of day and year, the strength and colour of the light, the character of the emulsion, the stop used, and the kind of subject being photographed. The only really reliable guide is an exposure meter, intelligently used according to the instructions. The fundamental facts of exposure apply everywhere, and are in no way affected by the name of the country in which the photography is being done.

Parallax.

What is meant by the term "compensation for parallax"? A. A. (Lymminster.)

The term you quote has several meanings in different connections, but we presume that you are referring to an adjustment between the taking lens and the finder lens in certain cameras. There must always be a difference in the amount of subject included by the two different lenses, and this becomes more marked with objects close to the camera. To counteract this, as the taking lens is racked out, the finder lens is correspondingly tilted downwards, so as practically to eliminate any difference of view.

Enlarger Distances.

What are the measurements to enlarge from $2\frac{1}{2} \times 2\frac{1}{2}$ to half-plate, from negative to lens and from lens to paper? F. W. G. (Stoke.)

We have frequently given the formula for finding the distances for any definite degree of enlargement, but this cannot be done in your case, as no degree of enlargement will make a square picture fit a half-plate. You will have to decide how much paper and film you are going to sacrifice. In any case, you cannot make an enlargement merely by measurements, as the final focussing has to be done by observation. All such distances, too, are affected by the focal length of the lens, which you do not state, although you mention the maker's name, which is immaterial.

Thin Negatives.

I used a fine-grain developer for some panchromatic plates, but the negatives were thin and useless. Uranium intensification has not improved them much. As exposure was adequate is it possible to bleach and redevelop them? J. R. (Shelley.)

As far as we can read between the lines of your letter we should consider that the development time was quite insufficient for the particular plates you

were using, as you must remember that different emulsions require different development times to get the same contrast. Before you can do anything further you must remove the whole of the uranium stain by washing the negatives and placing them for a sufficient time in a bath of water to which a little ammonia has been added. You can then proceed to bleach and redevelop in the manner described in our beginners' article in the issue of August 22nd

Modifying Background.

If I have the enclosed print professionally enlarged would it be possible to tone down the background? F. J. H. (Greenwich.)

We do not know exactly what you mean by toning down the background. It might be lightened or darkened, or something of each. In any case, any treatment of the kind would have to be handwork of a pretty highly skilled nature, on negative, or print, or both.

Platinotype.

Where can I obtain paper for the platinotype process? Can you give me the name and address of the manufacturers? J. L. C. (Spilsby.)

Any photographic dealer can supply you with the paper to order. It is made by the Platinotype Company, of 66, High Street, Penge, London, S.E.20, who will no doubt supply you direct if you wish.

Filters.

Is a sky filter or a colour filter best for taking snapshots? What is the price of one? D. H. B. (Peckham.)

It is not a question of one filter being better or worse than the other. Taking everything into account, however, we should advise a filter of the same tint all over, and we should also advise the use of a rather pale one, which would not increase the exposure more than about twice with ordinary films. Otherwise you will not be able to take snapshots with it at all. You must consult a dealer as to the price, as this varies according to the quality and size of the filter.

Setting Shutter.

In working a Compur shutter would setting it between two marks give an intermediate speed? Is any damage done by altering the speed after the shutter is set? E. H. G. (Cardiff.)

You should certainly not attempt to set your shutter at intermediate speeds; the very construction of the shutter forbids this. We know of no reason, however, why you should not alter the speed after the shutter is set.

Stereoscopic Cameras.

Would you give me a list of stereoscopic cameras, with the names of their makers? H. B. (Bolton.)

We regret that we are unable to compile a list of stereoscopic cameras, especially as you do not even state the size you require. There are so few stereoscopic cameras made in proportion to others that we should advise you to decide what size you wish to use, and then look out for one second-hand. Most dealers in second-hand apparatus have a choice to offer, and often at very low prices.

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
12 words or less 1/-
1d. for every additional word.
PROFESSIONAL AND TRADE:—
12 words or less 2/6
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post **FRIDAY** for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham. 2; £60, Deansgate, Manchester. 3; 28s, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'". Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1. and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

PROJECTORS, ENLARGERS, and CAMERAS to cope with the FADING AUTUMN LIGHT

A RECENT TESTIMONIAL READS: "I have had a number of dealings with cameras but this is the most amazing value I have yet met with."—S. M.

FILMO J. S. PROJECTOR

With 750-watt Illumination.

The most powerful brilliant projector ever introduced to home movies. Aero-cooling. Entirely gear-driven. Has every refinement which goes to make professional-like movies for the amateur. Now in stock at Bond Street.

£95

Nine monthly payments of £11 1s. 8d.

EASY TERMS & EXCHANGES

Anything on nine equal monthly instalments. First payment secures goods. High allowance on your used camera in part exchange.

SIEMENS STANDARD PROJECTOR

Its 200-watt, 50-volt lamp, with special optical system, gives the unusually brilliant illumination of 130 lumens. New type take-up does not damage new films, and successfully projects old or worn films. Self-contained resistance inside machine. Throws a picture up to 10 ft. wide. Reverse mechanism. Complete with case. **£65**

Nine monthly payments of £7 11s. 6d.

PATHÉSCOPE '200-B' PROJECTOR

With 200-watt lighting. Picture 10 ft. wide easily obtainable. Flickerless projection. Sprocketed. Threading one side only. Single and tilting device. Works off any voltage. With lamp, plug, flex, adapter and one empty 300-ft. super reel. **£15**

Nine monthly payments of 35/-

LEICA MODEL III WITH F2 SUMMAR LENS

With automatic focussing enabling lens focusing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement. **£33:13:0**

Nine monthly payments of 78 6.

'AUTOMAX' PRINTS 3½/2½ from your (REGD.)

Rears Her Head**”

DRYDEN

The golden russet tints of leaf and fruit; the mellow sunlight and the shortening days . . . These are reasons why the alert photographer, out to catch the glory of the Autumn, loads his slides with Ilford Special Rapid Panchromatic Plates—specially colour sensitive.

ENSIGN, LIMITED, HIGH HOLBORN, LONDON, W.C.1

Picture-taking Indoors *at night*

*is easy now with
these new **Kodak** aids*

All you have to do:

Load your camera with

**Kodak Super Sensitive
Panchromatic Film**

or

“Panatomic” Film

— both extremely sensitive to artificial light.

Light your subject with one or more

‘Osram’ Photoflood Bulbs

*— they plug into ordinary electric sockets and
emit intense continuous light. Cost little more
than half the earlier type, yet are one-and-half
times as brilliant 4/- each*

Use a

“Kodaflector” Junior

— the reflector for maximum brilliancy . 6/-

*Obtainable from
your Kodak dealer*

● Ask him also for a free illustrated Kodak booklet on Night Photography, which tells you how to use these new aids.

KODAK LIMITED • KODAK HOUSE • KINGSWAY • LONDON • W.C.2

PLEASE MENTION “THE AMATEUR PHOTOGRAPHER” WHEN CORRESPONDING WITH ADVERTISERS.

THE CAMERA THAT TELLS YOU WHAT TO TAKE ...

Rolleicord

ROLL-FILM MIRROR REFLEX

That's the beauty of the Rolleicord, for in its deep focussing hood you can see your picture, actual size and right way up. The other wonderful features of this clever mirror-reflex camera include—full compensation for parallax, round focussing knob with meter scale always in ready position, frame finder for sports pictures, rigid focussing and patent film guide. Takes 12 pictures on $3\frac{1}{2} \times 2\frac{1}{4}$ 8-exposure roll film for 1/-. With F/4.5 Zeiss Triotar lens. Amazing value at **£10:10:0**

See that your Rolleicord is supplied in the patented solid leather case which hangs from the camera while in use by two leather straps. After exposure the camera slips back into the case easily and quickly. Price £1. See the name "Rolleicord" stamped on it.

THE BEST USED BARGAINS

CAMERAS—EVERYTHING FOR AUTUMN!

BIGGEST OFFER!

READ THE SPECIFICATION

For 16 pictures on vest-pocket roll film. Fitted with Skopar anastigmat f/3.5 lens in Compur shutter, speeded 1 to 1/300th sec., and T. and B. This cleverly designed and very modern camera is an instrument of great precision. New type focussing knob can be set whilst the camera is closed. One press and instantly the Perkeo springs open to the ready position. The focussing knob is so placed that turning the camera round to alter the focus is avoided.

Every detail has been given careful consideration in design and manufacture. The name Voigtlander has always been a byword in the trade for the highest class and finish.

The Perkeo is real pocket size $4\frac{1}{2} \times 3\frac{1}{2} \times 1\frac{1}{2}$ over all. Weighs only 13 oz. Ideal for sports, holidays, travel, hiking. Including plated leather sling, depth of focus table, exposure calculator and cable release, and maker's full guarantee.

Speaks for itself !!!

BRITISH
MADE

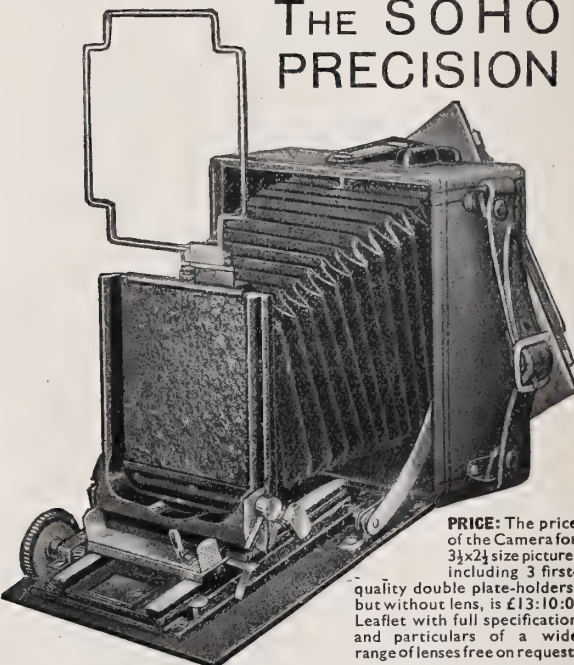

There is no need to speak at length of the exceptional qualities of the SOHO PRECISION Camera. Read this extract from a letter recently addressed to the London Camera Exchange Co., Ltd., by an advanced amateur photographer:

"You may remember you recently supplied a Soho 'Precision' Camera to me, this is worth its weight in platinum, and is producing as good results as I formerly obtained with a half-plate triple extension camera."

We could ask for no better confirmation of our claim that the SOHO PRECISION possesses all the advantages of a FIELD CAMERA and is in addition as MOBILE AS A POCKET CAMERA.

full details from **SOHO LTD., 3, Soho Square, LONDON, W.1**

THE SOHO PRECISION

PRICE: The price of the Camera for $3\frac{1}{2} \times 2\frac{1}{2}$ size picture, including 3 first-quality double plate-holders, but without lens, is £13:10:0. Leaflet with full specification and particulars of a wide range of lenses free on request.

Indispensable to every Photographer

British Made.

The

Vertical Enlarger

has met a long standing demand for an Enlarger which, with the simplicity and certainty of its automatic focussing, combines the possibility of focussing each picture to an individual choice.

The V.N. Enlarger is therefore the ideal instrument for both the beginner and the advanced worker. Extreme rigidity is ensured by its two steel pillars supported by a strong stay, all being firmly clamped to the base. The lamphouse is made of aluminium and specially designed to prevent overheating even when a lamp of greater power than the 75-watt lamp supplied is used. A first-class F/4.5 lens is fitted and throughout its construction no point has been neglected which would contribute to its simplicity and efficiency.

Taking 6 pictures 3×4 cm., costing only one penny each. All-distance lens, 3-speed shutter, 1/25th, 1/50th, 1/100th sec., T. and B.

F/6.3 Ensar anastigmat **30/-**

F/6.3 Ensar anastigmat **50/-**

The New Pathscope MOTOCAMERA

Multi-speed Device.

Waist-level finder, end-of-film indicator. Fitted f/2.5 anastigmat and $\times 4$ Telephoto attachment, spring drive, takes 30 ft. of film. **£22:0:0**

Nine monthly payments of 51/4.

THE BALDAX

Takes 16
Pictures on
Standard
 $3\frac{1}{2} \times 2\frac{1}{2}$
Roll Films

F/3.5 Meyer Trioplan anastigmat, Ibsor shutter, speeds 1 to 1/500th sec., T. and B.

Nine monthly payments of 14/7. **£6 : 5 : 0**

The DEKKO CINÉ CAMERA

For 9.5-mm. Films.

British Made.

20-mm. f/3.5 Dallmeyer anastigmat (fixed focus), interchangeable screw-in lens mount. Variable speeds, half to normal and slow-motion, 64 pictures per second, single-picture device, spring drive, taking through full 30-ft. of film at one winding, telescopic type finder. Body of special wear-resisting bakelite. All outside fittings and film gate chromium plated. **£6 : 6 : 0**

Nine monthly payments of 14/9. **£8 : 18 : 6**

Fitted 1-in. f/1.9 Dallmeyer anastigmat, micrometer focus. **£6 : 6 : 0**

Nine monthly payments of 20/10.

The WESTMINSTER

THORNTON-PICKARD FAMOUS REFLEX CAMERAS

T.-P. RUBY HORIZONTAL REFLEX

A very compact reflex for plates $3\frac{1}{2} \times 2\frac{1}{2}$ or film packs $3\frac{1}{2} \times 2\frac{1}{2}$. F/4.5 Dallmeyer anastigmat, self-capping focal-plane shutter, speeds 1/10th to 1/1,000th sec. and Time. Complete with 3 single dark slides. **£8:15:0**

Nine monthly payments of 20/5.

T.-P. SPECIAL RUBY REFLEX

For plates $3\frac{1}{2} \times 2\frac{1}{2}$ or film packs $3\frac{1}{2} \times 2\frac{1}{2}$. F/3.5 Dallmeyer Press anastigmat, self-capping focal-plane shutter, speeds 1/10th to 1/1,000th sec. and Time, fitted with Preset Insto Stop, complete with 3 single slides. **£16:15:0**

Nine monthly payments of 39/-.

Special Purchase FROM LEADING AMUSEMENT CATERER OF PATHÉSCOPE 200-B PROJECTORS

(SLIGHTLY SOILED)

LIMITED NUMBER ONLY

9.5 mm. (British made).

£10:17:6

Cost £15 : 0 : 0

Nine monthly payments of 25/5.

OUTSTANDING FEATURES:

Fitted with highly efficient 250-watt direct lighting system, giving a brilliant screen picture 10 ft. wide. Flickerless projection. Very compact. Fan-cooled and asbestos-lined lamp-house. Simple threading. Universal tilting movement. Motor rewind, for use on A.C. or D.C. supply, complete with lamp and motor drive for use on any voltage from 200 to 250 volts. 300-ft. empty reel and flex.

Please state voltage when ordering.

LEICA SPECIALISTS.

THE LEITZ "FOCOMAT" ENLARGER

With Automatic
Focussing.

Takes the standard 5-cm. focus Leica lens, screw-in fitting, automatic focussing adjustment, scaled from 2 diameters up to 10 diameters. Will take negatives 18 x 25 mm., 24 x 36 mm., 3 x 4 cm., and 4 x 4 cm. Met. a l masks can be supplied for any of these sizes. (Write for leaflet). **£13:19:0**

Nine monthly payments of 32/7.

Very Liberal Exchange Allowances.

Hire Purchase Terms.

LEICA MODEL III

With F/2 Summar in Collapsible Mount.

Self-capping focal-plane shutter, speeds 1 to 1/500th sec., T. and B., automatic focussing, interchangeable lens mount. **£33:13:0**

Nine monthly payments of 78/6.

Fitted with f/3.5 Elmar anastigmat. **£25:0:0**

Nine monthly payments of 58/4.

graphers, Ltd.

THE AGFA Compur Speedex

Takes
Standard
 $3\frac{1}{2} \times 2\frac{1}{2}$
Roll Films

F/4.5 Agfa anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B., and B. reversible optical direct finders, self-erecting front, all-metal body, hinged back, special type safety window device for panchromatic films. Only. **£6 : 6 : 0**

Nine monthly payments of 14/7.

THE MULTI-SPEED EXAKTA

Self-capping focal-plane shutter, speeds 1/10th to 1/1,000th sec., T. and B., delayed-action 1/10th to 6 sec. Fitted f/2.8 Zeiss Tessar anastigmat, metal focussing hood, with magnifier, simple focussing, 3 ft. to infinity. Takes standard V.P. films. Double exposure an impossibility. **£26:0:0**

Nine monthly payments of 60/8.

THE VOIGTLANDER BRILLIANT

Takes 12 pictures
 $2\frac{1}{2} \times 2\frac{1}{2}$ on standard
 $3\frac{1}{2} \times 2\frac{1}{2}$ Roll
Films.

Fitted f/7.7 Voigtlander anastigmat, speeded shutter, 1/25th, 1/50th and Bulb, complete with sling strap and release. **45/-**

Fitted f/6.3 Voigtlander anastigmat, speeded shutter, 1/25th, 1/50th, 1/100th sec., T. and B., complete with sling strap and release. **85/-**

Nine monthly payments of 9/9.

THE WESTMINSTER WAFER

For Plates $3\frac{1}{2} \times 2\frac{1}{2}$, or Film Packs $3\frac{1}{2} \times 2\frac{1}{2}$.

Fitted f/3.5 Meyer-Trioplan anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B., complete with 3 single metal slides in pure case. **£9:10:0**

Nine monthly payments of 22/2.

Fitted f/4.5 Zeiss Tessar anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B. **£10:10:0**

Nine monthly payments of 24/6.

ANNUAL EXHIBITION

Sept. 8th — Oct. 6th

ADMISSION FREE

Open Daily from 10 a.m. to 9 p.m.
(except Tuesdays and Fridays from
10 a.m. to 6 p.m. only)

at the Galleries of the

Royal Photographic Society
35, Russell Square, W.C.1

The Exhibition at Home

No matter where you may be "The Year's Photography" enables you to examine at your leisure a selection of the finest prints from the Pictorial—Natural History—Record Sections of the Exhibition. Printed in full photogravure, the demand for this edition is always large. It is advisable therefore to order it at once—if you cannot get it from your Photographic Dealer or News-agent send a 3/- P.O. direct to the Exhibition Department,

Royal Photographic Society,
35, Russell Square,

An Autumn Landscape

A modern version of the
familiar Harvest Field scene.

Non-Stop Photography.

The "all-the-year-round" qualities of amateur photography have never been more clearly demonstrated than at the present time. In the past, the approach of autumn was the signal for abandoning outdoor camera work and packing up apparatus until the following spring. There were, of course, a few enthusiasts who realised the beauties of autumn and winter landscapes, and continued the work to their own great advantage. The chief reasons advanced by the others for not continuing photography in the open were: unsuitability of the light during the darker months of the year and the difficulties in making hand-camera exposures. To-day all that is changed; the numbers of amateurs who will continue to use their cameras for autumn and winter snapshots have increased to an enormous extent. This is due partly to the desire for picture-making that has steadily grown year by year, and partly to the great strides made

by manufacturers in the production of high-speed sensitive material and big-aperture lenses. With the modern apparatus and films available—and both within the reach of every pocket—there is no excuse for putting away the camera on the score of the reduced quality of light. Ultra-speed panchromatic film now gives the amateur the same power of making snapshots on the duller days of winter that was only possible on the brightest summer days in past years. Apart from the usual indoor activities of the keen amateur during the autumn and winter we look for a notable continuance of interest in outdoor photography during the next few months.

Our Annual Lantern-Slide Competition.

Among the indoor activities that attract the amateur photographer during the autumn and winter months the making of lantern slides is claiming a steadily increasing

interest. A glance at the magnificent display of slides at the Royal Photographic Society's exhibition will convince everyone that better slides are made to-day than at any previous time. We know, too, that more slides are being made, and although not so many brands are advertised, the lantern plates that are now being manufactured in this country are the finest in the world. "The A.P." Annual Lantern-Slide Competition is always a good test for the slide-maker's abilities, and on another page in this issue will be found full particulars of the competition for this year. We hope that all our readers who are making slides will send in their best examples, as the standard is a high one; but any slide that reaches that standard can be sure of inclusion in the prize set that tours the country until the following spring. The closing date, October 31st, should not be overlooked. In the meantime, Secretaries of Societies should apply for "The A.P." Prize Slides without delay.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Filter with Ordinary Plate.

If I use one of the usual yellow filters on an ordinary (not ortho) plate, will it be an advantage and improve the colour values?

J. W. M. (Blackpool.)

For autumn photography out of doors, or with flower subjects indoors, is it really necessary to use special plates and filters? If so, is there any simple method of improving results, or are these matters beyond the comparative novice?

F. F. G. (London.)

We are dealing with these two questions together, as the same fundamental principles apply in each case. The whole question of specially sensitised material and the use therewith of a wide and varied range of colour filters, is a highly technical one; but as it affects the amateur photographer in his ordinary work the underlying facts may be simply stated and easily understood.

An "ordinary" plate is most actively affected by ultra-violet, violet and blue light. It is slow to yellows, and blind to reds. Daylight is rich in the very rays to which the ordinary plate is most responsive, and to cut out a large proportion of these rays by means of a yellow filter simply has the effect of "slowing down" the plate. There is therefore no advantage in using it, and no improvement in colour values would result.

With any orthochromatic emulsion the sensitivity is carried into the yellow region, and with a panchromatic emulsion into the red. Such plates or films will be affected by rays which would have little or no effect on an ordinary plate with normal exposures. At the same time both orthochromatic and panchromatic plates are disproportionately sensitive to ultra-violet and blue, and a yellow filter serves the purpose of damping down these rays, by complete or partial exclusion, while the other rays are doing their work.

Let us consider an autumn landscape which includes a blue sky and both yellow and red foliage, and imagine its rendering

on an ordinary, an orthochromatic and a panchromatic plate respectively. All three plates will be over-sensitive to blue, and without a filter the sky will be more or less over-exposed. With a filter this exposure of the sky will be reduced in all cases, but the ordinary plate will respond to neither yellow nor red; the orthochromatic to the yellow, but not the red; the panchromatic to both yellow and red.

It follows that the best method of treating the subject is to use a panchromatic plate (or film) which will respond to all the three colours, with a yellow filter which will prevent excessive action of the blue. This is what is done, and must be done, in the case of screen-plate colour processes, and the accuracy of the resulting colours is proof of the soundness of the procedure. With monochrome processes there is a corresponding accuracy in the tone values by which the various colours are represented.

When it comes to indoor flower photography the same principles apply, and could be exemplified by photographing together blue, yellow and red blossoms, on the three classes of plates, and with or without a yellow filter. But this holds good only if daylight is used. With various artificial lights different conditions arise, both in the exposure factor of a given filter, and in the tone values resulting.

Taking typical ordinary, orthochromatic and panchromatic emulsions, and a yellow filter of the order of the standard Wratten K3, the factors for daylight have been given as 32, 12 and $4\frac{1}{2}$; but with the same plates and filter with a clear Mazda lamp, the factors are 3, 3 and $1\frac{1}{2}$; and with a Cooper-Hewitt lamp, 20, 32 and 5. That is to say, we must take into account the constituent rays of the light itself; the sensitivity of the emulsion to these rays; and the filtering effect of the rays exercised by any given light filter. This is why, in the colour processes referred to, it is necessary to have special filters for lights of different character.

FOR many photographers the autumn period is one of the finest in the whole year for picture-making out of doors. In the first place the sun is at its highest for a very brief space of time during the day, with the consequence that better shadow effects can be obtained in brighter light than was possible in summer evenings.

It must be remembered that good shadows give the suggestion of sunlight to a picture, but care should be taken that they possess detail, and are not just patches of clear glass or celluloid on the negatives.

Scenes which were brilliantly lighted in the height of summer are now much more softly lighted, and an exposure in the autumn on many town scenes which were too hard in outline under the glare of the summer sun will often prove well worth attempting again at the present time.

One of the most important phases of autumn photography, if not the most important, is the appearance of wooded districts, when the trees take on their many-hued brilliance, and the carpet of leaves below covers up many an ugly spot which would normally have marred the composition.

Reds and golden browns predominate in this class of picture-making; but a great deal of the beauty of the scene will be lost if the use of panchromatic material is not resorted to, with the accompaniment of suitable filters.

This stipulation need not deter the owner of modest apparatus. Filters can be obtained at prices to suit all pockets now, and while it is always advisable in photography to buy the best, a compromise may be effected by purchasing the best that can be afforded.

With regard to the man using just a humble roll-film instrument, he is no longer debarred from taking part in this seasonal work, since

AUTUMN WORK with the Camera

The finish of the brilliant days of summer is by no means the end of the camera season, even for the amateur with the cheapest apparatus, providing he will observe the necessary precautions. In the following article some suggestions for autumn work with the camera are given.

he can obtain fast panchromatic roll films for the expenditure of a few extra pence, and can develop them in a daylight-loading tank, without even the need for desensitising.

The brown earth at this time of the year makes a good setting for

are to be seen on our south and west coasts at this time of year, and dramatic cloud effects are quite easily obtainable, even with an ordinary box camera if no close foreground subjects are included.

Perhaps one of the finest effects of autumn is the mist in the mornings, and many an ugly outline can be softened and turned into a presentable picture by taking advantage of the atmospheric haze. Filters should not be used for these effects, as they are inclined to cut out the mist altogether; nor should development be taken too far.

One of the best flowers of the year from a photographic point of view is the chrysanthemum, and these abound in the autumn. Wonderful blooms can be photographed indoors, or out of doors if sheltered from the wind, and the tyro looking for

fresh worlds to conquer will find here a fascinating subject for his camera. Side lighting, not too strong, a small stop to give sharp detail, and a full exposure to retain all tones, are the points to note when photographing these flowers.

Care should be taken when out on autumn days that moisture does not collect on the lens or filter and spoil the definition. The camera should be carefully wiped also before it is put away after an outing, as there is much moisture in the air. Exposure should also be estimated very carefully, using a meter whenever possible. The light is beginning to take on a red hue, especially in the evening and very early morning, and if panchromatic material is not being used this may lead to disastrous under-exposure.

Autumn Morning.

farm operations, and the owner of a large-aperture lens should try for pictures of the birds following the plough or other farm implement round the fields.

Clouds are practically essential to the success of this kind of picture if any sky is included, and nowadays these can be obtained by the use of a medium filter, where the lens aperture will allow of it, although sometimes clouds are caught without any filter at all during the autumn months, usually if the picture is under-exposed a little.

Careful development is very necessary with this class of subject, otherwise the cloud effects will be lost, and hard, contrasty landscapes will result. A short development is preferable, yielding a thin but finely-graded negative.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

SOME AUTUMN SNAPS.

THE other afternoon I spent a couple of hours testing a new camera, and as this is something we all have to do at times I will describe how I did it. Further, I had the autumn season in my mind, and a little farther back in the same mind I had a vague idea of the coming winter. The camera had a lens working at $f/2.9$, and I was wondering whether this would not be a useful acquisition for use in the shorter and duller days.

As it happened, the day of the test was a sunny one. There was not the hard glare of some summer days, but a soft light with a suggestion of haze in the distance. Such days are ideal for many kinds of work, and now is the time for us to take every possible advantage of them. Skies, too, are often attractive, and we ought to retain them without much trouble, even on ordinary film or orthochromatic plates, especially if we have a lens that will work satisfactorily at fairly large apertures, so that we can use a light filter without making exposures too long for ordinary "snaps."

Fig. 1.

Fig. 2.

The camera I was using takes sixteen exposures on the usual eight-exposure $3\frac{1}{2} \times 2\frac{1}{4}$ film—a size which I prefer to the smaller ones, as it leaves a margin when the subject would otherwise be a tight fit. This camera was a new one recently put on the market, but it is not my business to review it here. It has an $f/2.9$ Meyer Trioplan lens in a delayed-action Compur shutter, working to $1/250$ th of a second. Some of us cannot afford an expensive small camera, but as this costs only about six guineas complete it gives some of us a hopeful chance.

My first exposure was a failure. Pressing the special release fitted to the shutter I found that my finger caught the moving lever of the shutter as it went off. Fortunately I noticed what had happened, or I might have been puzzled by that first negative. I repeated the exposure and the second negative was a good one.

I then proceeded to put the camera through its paces, using a variety of stops, shutter speeds, and scale distances. Fig. 1 was a special test for the small direct finder, and I noted carefully how the subject filled the space in the finder; it comes out very

accurately in the print. (Exposure $1/25$ th of a second at $f/11$.)

Fig. 2 is enlarged from only part of the negative—about the size of the familiar postage stamp. The original

THE *Leica*

FOR THE DISCRIMINATING AMATEUR

The smallest universal camera, neat and handy, constructed with microscopic accuracy to last; built-in automatic range-finder and combined winding of film and shutter. Ten interchangeable lenses to suit the requirements of the specialist. Up to 36 exposures with one loading. The camera for snapshots at night, banquets, stage scenes, for holidays, expeditions, mountaineering, architecture, sports and the Press.

The Leica is not just an ordinary camera but the leader of all miniature cameras, the camera which stands out on account of its unique qualities.

Fig. 4.

is of good quality, and would make a first-rate lantern slide by contact, or, preferably, by slight enlargement. (Exposure $1/100$ th of a second at $f/8$.)

The gilded beastie in Fig. 3 is on the South African building at Charing Cross. The camera had to be pointed up to get it, and I have not corrected the distortion, although this could be easily done in enlarging. Here the scale was set at twenty-five feet and the depth of definition is considerable. The figure is dead sharp, and nothing in the negative, near or far, is much out of focus. (Exposure $1/25$ th of a second at $f/8$.) I took another subject at ten feet, and again found everything satisfactory.

In Fig. 4 there is the combination of sun and haze that autumn days so often bring. As figures were moving pretty quickly I put the shutter on to $1/50$ th of a second and opened up the lens to $f/5.6$. As the scale was left at fifty feet, the definition on all planes is good enough. In fact, all the tests showed that the lens was reliable at all apertures.

On another street subject which included a good deal of

lettering I got a result at $f/2.9$ which made me wonder whether I had not very slightly impeded the shutter lever. Fig. 5 was also taken at $f/2.9$, but my position was awkward, and there is slight camera movement, the exposure being $1/10$ th of a second. It would not do to draw a conclusion from a single result of the kind. I have not yet had an opportunity of making further exposures at

Fig. 5.

full aperture, but I have examined the image given on ground glass, and I should say it will be perfectly satisfactory.

Such a camera certainly increases our chances for good autumn and winter work, even under trying conditions; but even with simpler and cheaper cameras there is plenty of opportunity for pictorial results for many weeks to come. It is just the time for keeping our camera busy.

W. L. F. W.

"The A.P." Monthly Competitions PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers.

FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are despatched on the fifteenth of the month following the announcement of the awards.

The closing date for the next competition is Saturday, September 29th, and for the October competition, Wednesday, October 31st.

How to Make Good Gaslight Prints

Autumn evenings are ideal for making prints from the numerous negatives the keen amateur has amassed during the summer. When the cost of the professional print is compared with the cost of doing it oneself, it will be found that many more can be made for the same amount of money. Provided the general principles of the process are grasped and normal care is exercised, prints can be made which will surpass in quality those made by D. & P. methods in shops.

By **ALASTAIR ATKINSON.**

VERY little apparatus is required for making gaslight prints and, therefore, little expense is entailed. A printing frame and a dish, equal in size to the largest print that will be made, and one or two half- or whole-plate dishes for fixing and washing will be required; also a graduated measure for liquids—a four-ounce conical one will do. A pair of blunt-nosed tweezers costing sixpence at the chemist's are useful for lifting prints out of the developer. This prevents transference of developer to places where it is not wanted, and fosters clean work. A threepenny packet of metol-quinol developer and a packet of acid fixer completes the list. Before commencing work these should be dissolved in water according to the instructions supplied with them.

Choice of Paper.

Choose a gaslight paper by any well-known maker. It is made with a variety of surfaces, the most common being glossy, velvet and matt. On enquiry it will also be found that each surface is coated with three grades of emulsion, namely, contrasty, medium and soft. The velvet surface is the best to start with and a packet of each grade should be purchased right away; no one grade will do for every negative.

The packet of paper should be opened well away from the light. A very suitable printing light consists of a pearl electric bulb of about 60 watts in a table lamp. If a cardboard screen is erected, the paper packet may be opened and the developing of the print done in its shadow. When the packet is opened the instructions should be read carefully, but at the same time it must be remembered that printing lights and negatives vary so much that these instructions can only be very general indeed.

The glass negative is put into the printing frame, film side upwards. If it is a film negative, a piece of plain glass should be fitted in the printing frame first. This can be done by the dealer who supplied it. The frame holding the negative is then held over a brightly illuminated sheet of white paper. If the image appears

brilliant and strong the soft grade of paper should be used; if it appears flat then the vigorous grade should be chosen. Usually, however, it is between those extremes, and therefore it is well to try the normal grade first. Should the resulting print prove dull the vigorous grade must be tried next, or, if the print is too contrasty, the soft paper will be satisfactory.

A piece of the paper to be used is cut into strips. It should be remembered that all handling of the paper must be done in shadow and never in the direct rays of the lamp. The mask for producing white borders is next placed on the negative, a strip of the paper placed face down on the film and the back of the frame replaced. The frame is covered with a card and held before the printing light at a distance of about one foot. The card is pulled back, exposing about one-quarter of the strip. At the end of, say, four seconds it is pulled back another equal distance, and so on. In this case we would obtain a strip with four portions exposed respectively for 4, 8, 12 and 16 seconds.

Developing.

The strip is then plunged into the developer waiting in the dish. The dish is kept rocking so that the strip may be developed evenly and airbells avoided. When it has been in the developer for the time recommended in the instructions it is lifted out by means of the tweezers, rinsed in cold water, and dropped face down into the fixer. It should be immediately pushed under with a glass rod and the dish rocked.

In half a minute or so the test-strip may be examined in bright light. The exposure which gives the most suitable depth of tone should be chosen.

If nothing appears on the strip at all, then the intervals used should be increased to ten or fifteen seconds as necessary. Now that the exposure has been decided a full sheet may be used in the frame and as good a print as is possible obtained from the negative.

This is easily done in practice, provided that several important points

are kept in mind. First of all care must be taken to see that the developer is in the neighbourhood of 65 degrees Fahr. If it is too cold it loses its activity and its action is too slow, while if it is too warm staining and fogging take place. The development time also should be adhered to closely.

It is a common mistake to expose a print too long to the light and then, when the image is seen to flash up, to pull it out too soon in an endeavour to save it. The resulting print will be weak and of a poor colour.

Each paper requires a minimum time in the developer so that the finest black tones may be obtained, and the maker's time is always in excess of this minimum.

On the other hand, if an attempt is made to force an under-exposed print by prolonged development, it will undoubtedly stain. About 45 seconds will prove correct at 65 degrees Fahr. for most papers and developers; but these are things which must be settled by experience.

The prints in the fixing bath should be kept submerged. After about fifteen minutes in fresh acid fixer they should be transferred to a dish containing clean cold water. Too long a stay in the fixer may cause loss of quality.

Finishing the Prints.

After all the printing has been done the prints should be washed from one to two hours. In the absence of proper washers this is best done by turning them over in a large dish and rocking them gently. At intervals of five to ten minutes all the water should be poured off, fresh water poured in, and the prints turned over one by one to make sure that the gelatine surface is exposed to the fresh water. If this is done a dozen times or so the prints will be free from hypo and amenable to subsequent treatment if necessary.

Prints are best dried by laying them face downwards on a piece of washed muslin suspended on rollers or stretched on a frame. They will dry almost flat and will be free from "tear drops." The appearance may be further enhanced by trimming the margins even with a trimmer and celluloid rule.

A Further Note on the London Salon

EVERY year the visitor to the London Salon of Photography has an opportunity of seeing and studying a great variety of the best work produced by well-known pictorial photographers in other countries.

This year is no exception, but there is little doubt that although the standard of these prints is remarkable, the British workers have also put up a fine display. It will be felt, however, that while there is no "picture of the year," the general level attained is very high indeed throughout the entire exhibition.

Almost any one of a big percentage of the exhibits would have been hailed as an outstanding production a few years ago. To-day, it is only one of many, all equally good, but among all that attract attention it is the wonderful technical quality that compels admiration.

Here we have photography at its best, and applied in a manner that confirms its personal possibilities. We realise that it is a medium with definite characteristics, and when used by an artist as a means of expression the result is indubitably a work of art.

To glance at the compositions of Ortiz Echague of Madrid, the figure work of Pierre Adam of Paris, the child groups of O. Ecclesia of Turin, the landscapes of J. B. Eaton of Australia, the still-life studies by Dr. E. S. Boon of Alassio, the character heads by M. F. Y. Coppens of Holland, the figures by H. F. Kells of Canada, the

portrait work of Jan de Meyere of Stockholm, the dainty nudes of A. F. Kales of Los Angeles, the bold viewpoints of J. Vanderpant of Vancouver, the rich figure treatment by Julian Smith of Melbourne, and the unmistakable landscape technique of Leonard Misonne of Belgium, to mention but a few of the pictures from the thirty or more countries represented in the Salon, we realise that they must be considered individual works of art.

We find, too, that national characteristics emerge in the photographs from different countries. This is notably so in the case of the Japanese workers both from Japan and from America. The innate feeling for right design that has distinguished the work of Japanese artists in the past is manifested in the newer medium, and for many years the prints by Japanese exhibitors have been a feature of the Salon.

To-day, however, their influence has spread, and compositions by other workers inspired by the earlier prints by these artists with the camera appear on all sides.

We have already referred to the British work in a previous note. In the meantime we commend the Salon to the attention of every reader of "The A.P." who wishes for a fine display of pictorial photography.

The show remains open daily from 10 to 6, until October 6th, at the Galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, London, S.W.1 (near Trafalgar Square).

At the R.P.S. Exhibition

A SECOND visit to the Royal Photographic Society's Exhibition at 35, Russell Square will amply repay any time spent on the scientific and technical exhibits. In a previous notice we have referred to some of the exhibits in these sections, and probably the visitor will have the greatest interest in the variety of subjects shown in Room 4 on the second floor.

Here are housed the astronomical, aerial and geological photographs that are always a feature of the show, while the sections devoted to photomicrographs and radiographs also occupy considerable space. The Press and publicity section is not so well supported, but a representation will be found in the same department. The outstanding exhibit in this collection is among the astronomical photographs, where the very large picture of the moon will claim immediate attention. According to the description accompanying the print, when this picture (which was made with the 100-in. telescope at Mount Wilson Observatory) is viewed at a distance of 10 ft. the moon is seen at an apparent distance of about 4,000 miles. The technical quality of this print is remarkable, and it can be examined in close detail.

Infra-red photography is exhibited in this room by A. L. Cranch, and other technical applications of photography are shown by G. R. Thomas, Harold E. Edgerton; aerial photographs by Aerofilms, Ltd., and Robert A. Smith and H. Frederick Low, have the usual fascination, and they have a high degree of technical excellence. Radiographs are again a notable feature, and some of the best are from the Research Laboratories of the Eastman Kodak Co. at Rochester. Ilford, Ltd., also show a number, and the Hood Medal, which was placed at the disposal of the Council by Mr. Harold Hood as an award in recognition of a meritorious performance in any branch of

photography, is awarded to George Aubourne Clarke for his series of meteorological photographs in this section.

Photomicrographs by F. Martin Duncan, W. Stephenson, T. S. Beardsmore and Ranald Rigby will further interest the visitor, while the collection is rounded off by a number of attractive record photographs by workers whose names appear in the pictorial section.

Another phase of the exhibition is the professional and trade section, and in this the exhibits are scattered throughout the building and appear in different rooms.

In the entrance hall are exhibits by J. H. Dallmeyer, Ltd., Kosmos Photographics, Ltd., The Autotype Co., Ltd., Kodak, Ltd., Elliott & Sons, Ltd., and Ilford, Ltd. Messrs. Kodak, Ltd., occupy the library also with a pictorial exhibition and demonstrations of home movies and other specialities.

In the inner entrance hall appear Messrs. Gevaert, Ltd. In Room 4 are exhibits by Finlay Colour, Ltd., and Ilford, Ltd., Ross, Ltd., and Soho, Ltd.

In Room 1 are Cameras, Ltd., Cinepro, Ltd., Cinex, Ltd., R. Gschöpf and K. Pokorny, with a new natural-colour process, G. B. Equipments, Ltd., Pathéscope, Ltd., Williamson Manufacturing Co., Ltd.

In the studio are exhibits by Agfa, Ltd., also R. Gschöpf and K. Pokorny. On the staircases are exhibits by Kodak, Ltd., Ilford, Ltd., Lascelles & Co., Ltd., and *The Amateur Photographer and Cinematographer*.

In Room 3 there is to be seen an exhibit by A. O. Roth and also one by Zeiss Ikon. In Room 5, the following firms are represented: E. Leitz (London), Ltd., J. A. Sinclair & Co., Ltd., David Allan, Ensign, Ltd., Ross, Ltd., Zeiss Ikon, Ltd.

The exhibition remains open daily until October 6th, from 10 to 9, Tuesdays and Fridays excepted (lecture evenings), when it is closed at 6 p.m.

Many practical articles appear from time to time on the subject of home portraiture under all sorts of lighting conditions, and with details of exposures and development, etc. It is not often, however, that the production of the final portrait picture receives the same consideration. The article on this page is, therefore, to be welcomed as dealing with a phase of amateur portraiture of considerable interest but frequently overlooked.

THE INDOOR SEAS

By
L. GORDON PAULE.

HOW TO MAKE THE MOST OF THE

It is usually taken for granted that the production of a perfect negative will lead, *ipso facto*, to the production of a perfect print, and whilst this is no doubt true enough in the ordinary sense of the words "perfect print," it is not alto-

gether true when applied to portraiture.

A successful portrait is something more than a perfect print—it is a combination of perfection in negative and print *plus* quality in presentation.

That is to say, however good a portrait negative is, a straight print made from it will not necessarily produce the most satisfactory result *pictorially*.

It is a curious thing, yet nevertheless true, that sitters to an amateur photographer seldom adopt the best attitudes for the purpose of securing a negative which can be printed without some alteration being necessary to make the result a success.

One of the reasons for this is, of course, the inability, or rather the lack of skill, in the operator to secure a correct pose. Another reason—and much more frequent with the amateur—is the inability to obtain on his plate or film only that portion of the figure which is wanted. The professional, with his experience, his long-focus lenses, and his studio props, can so arrange things that nothing extraneous appears on his negative, with the result that a contact print will produce, without any manipulation, all that is desired and no more.

The amateur, however, working in his own—or some one else's—home, and with only the limited apparatus he possesses, is handicapped by all manner of things. His backgrounds are improvised; his "studio" furniture, whilst appearing satisfactory, is not meant for the job, and does not photograph well; his lens is generally of too short focus, and his sitter, nine times

No. 2.

out of ten, does not bother to "make herself up." (For some reason the majority of home portraits seem to be of ladies!) The result, although perfectly lighted and exposed, is a print technically perfect, but including all sorts of details which contribute to its failure as a really good portrait, and is instantly branded as "amateur."

But the inclusion of unwanted detail is not the only bugbear with which the amateur is faced; he has to contend with the stiff, wooden attitude which most sitters, as I have previously mentioned, adopt. He has not the knack of posing them correctly, so that the finished portrait shows in all probability, besides unwanted detail, a model who is leaning too far back, or whose body is at some incongruous angle to the head.

These, then, are the chief faults in home portraiture, but if the photographer possesses an enlarger, they are comparatively easily corrected in the printing of the negative.

Dealing first with the question of unwanted detail, it is obvious that the only way of eradicating this is by enlarging that portion of the features which is required,

No. 1.

How I make my EXHIBITION PICTURES

No.
CCXLVIII
—
Mr.
JOHN LEE.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"TO reduce the making of an exhibition photograph to a definite formula is obviously impossible.

The work should be created in the photographer's mind before he enters into any technicalities; but given the inherent feeling for beauty that should inspire every creative photographer, it is then a matter of experience and knowledge before he can produce his picture.

"To my mind there is one quality in a photograph desirable before all else—spontaneity. Photography as a

'real' art needs an absolutely natural atmosphere, and any photograph lacking in this respect fails in its purpose.

"The poses of the subjects should be as simple as possible, and I have always found that the most successful pictures are those in which the models have more or less posed themselves. At the same time, it is most important to have gracefully posed figures, and I, personally, have learned more of this subject by studying the ancient Greek sculptors than by any other method.

"Lighting is one of the most fascinating subjects, as it governs most of the tone values of a picture. It is the little extra touch of lighting on the central object of the photograph which focusses our attention, and 'pulls' it away from the background, so giving the photograph its whole meaning. The balance of the lighting is much more important than the amount of light used, as it is possible by carefully balancing your high-lights and shadows to create a feeling of sunshine with quite a little light; always provided, of course, that your subject allows you to expose long enough to get a good negative.

"Nature gives us the finest lessons in composition, and if you take, for instance, a group of trees, you will find that they combine in some instinctive way to give a feeling of balance that is utterly satisfying, and which is most difficult to produce by artificial means. I think this is because one can feel a unity, a singleness of purpose, behind nature, that all but the greatest artists try in vain to emulate; and so, unless one is a genius, one must keep the composition as simple as possible, avoiding all ugly shapes and over-elaboration in background, and taking care that all lines in the picture tend to the single point that one wishes to bring before the observers' eye.

"And finally, in the making, or rather in the selecting of my exhibition prints I take into account the breadth of appeal, remembering that too high-brow a work is only appreciated by few. In the special realm of commercial and advertising photography the appeal must be strong, and so must the interest. There is no room for vagueness and doubt, and the necessary glossy bromide print imposes perfect technique on the author. It is significant that commercial photography has attained the exhibition stage."

(Technical.—The cocktail bar subject had 2 secs. exposure at f/22 on 10×8 Kodak pan. film. The picture of the hikers was taken by a single main light, with reflectors; $\frac{1}{4}$ second at f/11.)

ANY OLD CORNER

By REGINALD CHARLES.

A.P." in search of new subject matter should try it.

It is a marvellously good tonic, and also a splendid training for photographic observation and technique. Even the dustbin, in its natural surroundings with a few old cans and other "junk," can give me as much satisfaction in photography as a view of Loch Katrine.

The majority of amateurs when looking for suitable subjects naturally endeavour to photograph something which pleases them and incidentally pleases their friends. In nine cases out of ten the result is the "picture beautiful," the pretty landscape or the beautiful street scene. But what of the dusty corners and rubbish dumps that abound in everyone's garden?

The Toolshed.

THE late Ward Muir showed us all how to appreciate photography for its own sake. As a disciple of that worker I owe him a debt of gratitude for pointing out so clearly that a photograph can be beautiful as a photograph, and not as an imitation of something else.

For that reason I find the keenest possible pleasure in walking round the house and garden at various times of the day with a camera and tripod, and allowing the lens to reproduce the pictorial compositions to be found in odd corners. Every reader of "The

Waiting for the Dustman.

A corner of the Greenhouse.

Pictures of subjects similar to those which appear on this page can be made out of most unpromising material, and it is not generally necessary to go very far afield to find it. That old box in the toolshed containing the gardening implements may look forlorn at one time of the day and positively fascinating at another.

Sufficient exposure should be given to obtain detail in the shadows, and it will be found necessary to stop down a good deal when working at close range to get all the planes as sharp as possible. Success with this type of subject depends largely on perfect technique.

Development must not be carried too far as this will only tend to clog the high-lights. If it is found that on developing the negative an error in exposure has been made, fresh attempts are easily made, for the subject is always there.

AUTUMN is here with all its beauties, colouring and effects, which delight the eye and perplex the photographer. Bracken and trees are tinged with russet and gold, and early morning mists with the sunshine streaming through the soft atmosphere are subjects that need care and knowledge if the best renderings are required. They are, however, the effects one sees on a typical hop-pickers' morning.

The hop-pickers swing along gaily to the hop-gardens, with their refreshments, coats and stools and any other articles they may require for the day; the children follow after, playing as they go, and then they settle down to work.

The "cribs," which are constructed of canvas and rough-hewn timber, are placed in their different

Hop-pickers and a "crib."

"houses," the hop twines are pulled down and the hops quickly stripped by experienced hands. The cribs soon fill with the perfumed burr, and the children sit around and pick into upturned umbrellas or boxes, which get emptied in turn into the crib, and here and there a small child has become weary and lies curled

Measuring the hops.

Beauty in the hop-yard.

up asleep on coats laid down in the aisles of the hop-bine.

As you pass the hop-yard there is bustle and activity, and many voices are heard. The picturesqueness is indeed fascinating; everything leads to make some really interesting and unusual pictures.

Ready for the kiln.

As the day goes on the measurer comes round with his bushel, and the sacks are filled ready to be heaped on the wagon to be carted away for the drying-kiln. This process being over, the dried hops which lie heaped in the barn are now ready to be pressed into "pockets."

At first the scenes for the photographer are so numerous it is difficult to choose, but do not be in a hurry to make your exposures. If possible get a sunny day, the contrast

Photographing the Hop Harvest

By JOAN LYNE.

in the lighting makes a great difference; if it is dull the tone becomes monotonous, and figures, hops and ground appear uninteresting. Have a quiet walk round the hop-yard, for the pickers to become accustomed to you; some stop work at once and think their portraits are going to be taken, and possibly gather the family round, and the familiar words "Look at the camera" are then heard! This

must be altered until you get them in different positions working at their jobs, either pulling the bines down, sitting on or standing round the crib, or lighting the little fire for the kettle to boil. What

stopped down to f/6 or f/8.

Any time of the day in the hop-yard is a profitable time, as scenes are changing always, and then to the hop-kiln, from the drying to the pressing in the "pockets." Here time exposures are needed according to the light of the hop-barn.

Many are delighted to pose for you, and a promise of a print is welcomed. You return from these harvesting scenes with pleasant memories, and a selection of interesting and picturesque exposures that will bring back to you the scent of the hops.

A day's picking in the kiln.

a host of subjects to choose from!

A small camera can be used, but a quarter-plate reflex is most useful, as your grouping can be watched so as not to overcrowd, your composition can be more thought-out, and single studies and close-ups can be taken.

Do not be afraid of making several exposures—and fast films are best. If there is one particular favourite picture, take several in different positions. Plan your proper lighting, your shadows falling sideways. Expose from 1/50th sec. to 1/100th,

Sewing up the "pockets."

Enlarging from a "Difficult" Negative

EVERY enthusiastic amateur at some time in his career produces a negative that appears to be unprintable, or at least incapable of giving a properly graduated print. It generally happens that it is of a subject that cannot be repeated.

Such a negative has been in my possession for many years. It is a record of a particular scene, an effect that delighted at the moment of exposure. It was made on an ordinary

to reduce the negative with persulphate with a view to equalising the contrasts; second, to make a new negative via an over-exposed positive; third, to mask carefully during the exposure of the enlargement.

Finally, on the score of expediency, the third alternative was chosen.

A rapid, soft-printing bromide paper was secured and test exposures made for (1) the rocks, (2) the white foam. The enlargement was to be 20×16 ,

exposure for the foam was made through the hole in the card. This was moved constantly so that the dense portion of the negative only received the light.

The card was held fairly close to the lens so that a light-area much larger than the hole was projected, but when the edges of the foam were being treated the card was held nearer the paper to get a smaller light-area with a sharper outline.

It was realised that to obtain a full five minutes' exposure the treatment would have to be continued for at least four times as long. This was considered necessary because the hole in the card acted as a vignette for the light, and because the whole image was not being exposed at any one time.

The exposure of the dense portion was therefore continued for twenty minutes, which proved about right, and a full two minutes was given to the sky. The card was then taken away and the entire picture received a final 15 seconds' exposure, which was the correct amount for the rocks.

Normal development gave a perfectly exposed print. A reproduction of the enlargement is given on the opposite page.

The production of the finished print from this negative conveys two lessons which may be of value to the beginner. First, assuming the subject itself has some pictorial quality, no negative (provided it is not hopelessly under or over exposed) is so bad that it is not possible to secure a passable print from it. In the ordinary way, had time permitted, the second alternative mentioned at the beginning of the article for treating this negative would have been the best for the purpose. The method adopted, while resulting in a successful print, had an element of guess-work that could only be countered by experience.

The second lesson, and one that has been stressed repeatedly on previous occasions in these pages, is that a part of the subject is frequently greater than the whole. The selection of a portion suitably enlarged will often give a much finer and more impressive composition than would a print from the complete negative, no matter how good it can be rendered technically.

F. J. M.

Contact print from the original negative.

plate, panchromatic material not being so good or so readily obtainable then as at present.

At the time of taking, late on a winter afternoon, a deceptive gleam of sunlight gave a fictitious actinic value to the light, and the exposure, although correct for the rendering of movement, was insufficient for the plate as a whole. The result was under-exposed and harsh in contrast. The negative was put away and forgotten.

It came to light again recently and created anew the desire to make an enlargement of that particular subject.

Three methods of dealing with the harshness presented themselves. First,

and this from a portion of the 5×4 negative ($2 \times 1\frac{3}{4}$) was approximately ten diameters.

In a condenser enlarger, with the lens set at $f/6$, the exposure for (1) was 15 seconds, and for (2) five minutes. To expose for the rocks left the foam plain white paper; to expose for the foam rendered the rocks solid black. The reproduction of a contact print is shown on this page.

The enlargement was therefore made as follows: A small hole (about the size of a sixpence) was made in the centre of a piece of dark card. With the sheet of bromide paper in position on the easel and the image focussed, the yellow cap was removed and the

THE CAULDRON.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

ARCHITECTURAL interiors, except for an occasional representation of a village church, do not seem to attract the majority of beginners in photography, and it is but seldom that a subject of the class of No. 1, "Architectural Interior," by Miss W. Barraud, figures on the opposite page.

A Technical Test.

The fact is not surprising, for, in practically every case, an interior calls for a time exposure of appreciable duration. It may be a matter of a few seconds; may run into minutes; and, in some cases, into hours. A subject of this nature cannot be undertaken in the casual sort of way that most outdoor scenes are attempted. It requires deliberation, and, at least, some consideration for the claims of arrangement.

Moreover, the employment of a tripod is essential, and, speaking generally, the last thing the beginner of to-day wishes to do is to carry one.

It is too much trouble, but, if anything worth while in interior work is to be obtained, trouble must be taken. Sometimes, it is true, it may happen that a solid support can be found on a ledge or pew or something of the sort, but that is only a remote possibility, and, where it exists, the viewpoint must necessarily be circumscribed. A tripod does not impose any such limitation, and, besides, has the further advantage that the image can be conveniently studied on the focussing screen—a facility that cannot always be enjoyed where a temporary support is adopted.

Which was chosen in this instance is impossible to say, although, if the subject had been scrutinised with care, it is probable that the viewpoint would have been altered so as to exclude the rail in the bottom left-hand corner, and the table in the centre would have been removed from the field of view.

Spaciousness and Light.

These, admittedly, are drawbacks in a work that is otherwise very good indeed in its class. There is a sense of spaciousness and light, which gives the print something in the nature of a pictorial interest, and technically—

a subject of this type is a test for craftsmanship—the print is really excellent.

A feeling of light and spaciousness, but of a totally different kind, is to be seen in No. 5, "Storm Coming," by J. K. Hood, which is also of equally attractive workmanship.

The subject is somewhat reminiscent of a number of similar subjects which were exhibited and reproduced on our centre pages a year or so ago, but, nevertheless, it is not hackneyed, for most of them did not include the sky, and the wave, in general, was more continuous. There is therefore an element of freshness in this impression, and, for a beginner, the work is exceptionally promising.

Its luminous quality is very pleasing, but might be a little better brought out if the tone along the top edge were subdued a little, and that of the tumbled water of the wave at the base were also lowered. The pull of these two areas, slight though it may be, diminishes the attraction of the light along the crest of the breaking wave—where the main interest should centre—and the suggested revision tends to restrict their claim upon the attention.

Accents in Opposition.

It will doubtless be observed that accents in opposition are disclosed in the posts on the right and the patch of light along the horizon on the left.

These have the effect of emphasising the importance of the wave as the dominant attraction, and, whether introduced intentionally or instinctively, form an excellent compositional feature. Care and forethought seem to have been exercised, and they are repaid by the very high standard the effort achieves.

None of the other examples, this week, seems to attain the same level of artistic and technical achievement, but there is a suggestion of the value of an effect of sunshine in No. 2, "Morning Sunshine," by Soh Kee Thye, which, however, is somewhat impaired by a measure of overprinting and a rather excessive contrast. The subject itself has an extreme range, but this could have been countered either by a reduction in the time of develop-

ment of the negative or the substitution of a softer grade of paper for that employed in this instance. The light of the sky and that on the water is so brilliant that it detracts considerably from the effect of the sunshine in the foreground.

Design and Pattern.

That, of course, is where the chief attraction should lie, but the lights above introduce competitive notes which prevent that attraction from attaining the value it should.

If these competitive notes could be avoided, the alternation of bars of sunshine and shadow would make a very effective pattern, and introduce a suggestion of decorative design which would emphatically enhance the pictorial content.

In No. 4, "Hazy Reflections," by Mrs. D. Lawrence, there is a like suggestion of design arising from the way in which the lines of the rigging are contrasted against lines of opposing direction in the verticals and horizontals of the distance. Inasmuch, the work has points that are worthy of admiration, but the space on the left is inclined to suggest a sense of emptiness, and, perhaps, the arrangement would be improved by the removal of about five-eighths of an inch from that side.

Misty Sunshine.

The feeling of sunlight through a misty atmosphere is nicely conveyed, and the same impression is also a feature of No. 3, "Last Man Ashore," by J. K. Deane.

Here, also, the effect is stressed by the presence of very forceful darks in the immediate foreground, and, though the angle at which the boat and figure are seen is not altogether fortunate, the probability is that they had to be taken at that particular moment or the picture lost entirely.

As in the case of No. 2, however, the rendering is inclined towards an excessive contrast, the sky being regrettably blank in tone and the darks of the foreground too strong to enable printing to be carried any farther. A similar substitution of a softer, or less contrasty, type of paper would enhance the representation and is recommended.

"MENTOR."

OUR ILLUSTRATIONS

Some Notes on the Pictures reproduced in this issue.

REFERENCE has previously been made in these columns and elsewhere in this journal to the current exhibitions of the London Salon of Photography and the Royal Photographic Society, and we are

privileged to be able to reproduce four examples this week—two from each show. Both remain open a little longer, till the 6th October, to be precise, and any one of our readers who happens to be in London during the interim would be well advised to pay a visit to both.

The Autumn Shows.

The former is held in the galleries of the Royal Society of Painters in Water Colours, 5a, Pall Mall East, and the latter at 35, Russell Square.

One of the most pleasing of studies of the nude that has been seen in recent years is on view at the Salon, and is entitled "DAWN," by G. L. HAWKINS (Catalogue No. 32). It is a print in a high key, which is most appropriate for such a dainty figure, and its grace of form is enhanced in no small measure by the delicate and imaginative fancy disclosed in the choice of the setting.

The figure is, by reason of its comparative strength of tone, admirably displayed against the lighter setting, and the touch of brilliance on the head and arms lends a pronounced suggestion of relief. Besides stressing the separation of the figure from the background, these light notes, in conjunction with the dark note of

the head and the deeper shadows of the underside of the arms, emphasise its significance and enhance the importance already conferred by force of placing and human interest.

The attraction of the figure as the centre of interest is therefore rendered supreme, but the imaginative touch is to be seen in the inclusion of the sprays of foliage, which not only diversify the setting but also introduce a feeling of decorative design into the arrangement, and further stress the dominance of the figure by their suggestion of the form of radiation.

Their dark tone, too, tends to accent the delicacy of the setting, and the whole thing seems to be imaginatively conceived and finely executed. It could be wished, perhaps, that the bottom right-hand corner were not so obviously out of focus, but the slight defect is not very noticeable and certainly does not impair the appeal of the picture as a whole.

It is wonderfully well done. Everything—selection and arrangement of subject material; choice of key and treatment; and the incorporation of a suggestion of pattern—is in keeping, and the theme is admirably suited to the key. An utter contrast in treatment is to be seen in "NACH DER FAUSE," by J. DENKSTEIN, which is shown at the Royal (Catalogue No. 211). Here the key is sombre, and the touches of real light tone few and far between. The quality of the print is undoubtedly high, and the subject, to those whose interest lies in this sort of thing, quite attractive.

It is, however, of a domestic type, and scarcely comparable, from the æsthetic point of view, with its highly imaginative predecessor. Nevertheless, it is exceedingly good and attractive in its class, and the rendering of the texture of the cats' coats as well as the tones of the plate is exceptionally well managed.

Duality of Interest.

A feature of the print is the excellent way in which a suggestion of alertness is conveyed, the pose and attitude of both animals being instinct with life and true to nature.

The difficulty of arrangement, where two elements of nearly equal attraction exist, is well known, particularly in cases such as this, for, while one must predominate, the dual interest must be preserved, and neither can be allowed to sink into insignificance. Here, that

difficulty has been ably surmounted, the farther animal (1) claiming the major share of the attention, but the attraction of the other (2) is only a little less, and it admirably plays its part as the subsidiary member of the group.

As far as the relative positions of the two are concerned, there is not a great deal of difference in respect of strength of placing. Possibly No. 1, being nearer the centre and having the advantage of a little extra height, is somewhat more forcefully placed than the other, but the difference is slight, and the required supremacy of the first seems to be more attributable to its depth of tone than anything else. It is appreciably the heavier of the two, and on this account seems a degree or so the more important, while not unduly overshadowing the other. The precedence of the first is established, but, with the second exercising a proportionate pull, the unity of the group is maintained.

The plate is a useful introduction, for it both provides a connecting link between the two cats and furnishes a base which seems to complete a circular form of composition, the remainder of the line being suggested by the markings of the nearer animal

and the positions assumed by their two heads. The composition is well designed and singularly complete.

In comparison with "GEESE," by E. VADAS, which also comes from the Royal (Catalogue No. 170), the

simplicity of the former seems marked; although it must be admitted that, great as is the number of the birds, they are very well grouped and caught at a most fortunate moment. The effect of sunshine on their plumage is nicely suggested, and the outstretched wings and the dust thrown up by their passage gives an idea of the turbulent and clamorous character of these birds.

Dignity and Impressiveness.

The fact that the main line of the group lies along a diagonal holds the composition together quite well, and the inclined line suggests movement and action.

In the circumstances, this is peculiarly appropriate, and possibly the conflict of interest between the beginning and end of the procession has

been introduced with the idea of heightening that impression. The suggestion arises from the feeling that, while the attraction of the nearest lot of birds should be the strongest, the sunshine on the dust at the top makes so bright a note that interest seems to be divided between the two. Division of interest is by no means the same thing as duality of interest, for the first implies a dispersion of attraction and the second unification, and the wisdom of adopting such an arrangement of the chiaroscuro does seem open to question.

However, the subject is decidedly original and provides an intriguing experiment.

The qualities of dignity and impressiveness, together with a very real expression of artistic feeling, are innate in F. J. MORTIMER'S "THE CAULDRON," which is one of the outstanding successes at the Salon (Catalogue No. 29).

The dark masses of rock at the base, the elemental shapes of those on each side, the depth of tone in the sky, and the swift rush of the wave in the centre to break in an immensity of foam, supply an impression of the power of the sea that is striking in its intensity. It is extraordinarily powerful, and, what is truly remarkable, its effect does not rely upon any adventitious aid in the shape of a departure from a normal form of composition, but simply upon the natural resources of the scene and the choice of the precise moment for making the exposure.

Without any question, the centre of interest lies in the great splash of foam stretching across the picture. The attraction is localised in the bright patch of light at (1), and the suggestion of violent motion is highly stressed by

the employment of lines of a sloping tendency. These are chiefly to be seen in the upward impulse of the wave from right to left and in the backward slope of the foam from the left rising towards the right. Their

inclination creates an impression of motion as distinct from the static and peaceful suggestion of horizontal or vertical lines or a combination of them, and the feeling of force and power, in conjunction with the nature of the scene, originates from them.

Another factor of moment is the simplicity of the arrangement. This is apparent from the accompanying small sketch, and the part it plays can readily be seen. It enables the message of the picture to be instantly appreciated and its thrill to be immediately understood.

"MENTOR."

"The A.P." Monthly Competitions

AWARDS FOR AUGUST.

WE have come to look for many prints of outstanding excellence in "The A.P." monthly competitions, and the entries for August have again sustained this high standard. This particularly applies to the Advanced Workers' section. The Intermediate section has a number of fine prints also, while the increase in the number of entries in the Beginners' section is most marked.

We would particularly draw the attention of competitors, particularly in the Beginners' section, to the rules and conditions. They are very simple, but they must be observed or the prints will be disqualified. The rules will be found on another page in this issue. The awards are as follows:—

ADVANCED WORKERS' SECTION.

First Prize.—"Glass Angel," by Edwin Broomer, Glendower, Falkland Road, Torquay.

Second Prize.—"The Bow," by W. T. Dawson, 5, Eric Road, Wallasey.

Third Prize.—"The Rising Generation," by Edward Alenius, 159-18-84 Road, Jamaica, N.Y.

Mounting Prize.—"The Turbulent Tide," by Chas. E. Rollinson, Oakcrest, Christchurch Road, Newport, Mon.

Certificates of Merit.—"Summer Days," by Mrs. N. Ashmore, 50, Union Street, Burton-on-Trent; "Queen of the Hillside," by J. H. Clark, 304, Camberwell New Road, London, S.E.5; "Babyhood," by Norman Crawshaw, 5, Beresford Avenue, Bebington, Cheshire.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2 and Class 3, respectively.

Those awarded Honourable Mention are as follows: Hubert M. Bond (Woking); F. Annis Burrows (Chalfont St. Peter); G. Crosby (London, E.); L. W. Green (Rheims, France); R. L. Griffiths (Horne Hill, S.E.); Hannah Hartley (Liverpool); H. How (Sheffield); W. G. Kennings-Kilbourn (Chertsey); N. D. Kooka (Bombay); G. Lea (Potters Bar); (2) Chas. E. Rollinson (Newport, Mon.); Geo. A. Slight (Forest Hill, S.E.); K. M. Trathen (Redruth); R. C. Wadham (Beckenham); E. Webb (Petersfield); Miss M. Whitcombe (Bewdley); R. B. Whitehead (Magog, Quebec).

INTERMEDIATE SECTION.

First Prize.—"The Rock Driller," by W. Griffiths, Solway House, Queensville, Stafford.

Second Prize.—"April Cloud," by Major D. J. Stevens, The Laurels, Headley, Bordon, Hants.

Certificates of Merit.—"The Paddler," by W. Achurch, The Nook, Great Glen, near Leicester; "Music Hall," by H. B. Church, 8, Westbourne Avenue, Great Lever, Bolton, Lancs; "One of the Old School," by Chris. T. Salmon, 5, Westward Rise, Barry, Cardiff; "July," by G. T. Yeng, 1, Ta Tien Shu Ching, Peiping, China.

BEGINNERS' SECTION.

First Prize.—"Coaster Battling with Strong N.E. Monsoon in Hai-tan Straits," by W. B. Haslett, 20, Elaine Street, Stranmillis Road, Belfast.

Second Prize.—"On the Bridge," by M. O. Sheffield, 2, Woodside Road, Sevenoaks, Kent.

Certificates of Merit.—"The Kiss of the Sun," by George Hilleard, 8, Undershaw Road, Bromley, Kent; "Patricia Mary," by W. Nixon, 17, Hunter Terrace, Sunderland; "The Estuary, Barmouth," by G. L. Mallett, 73, Baldwins Lane, Hall Green, Birmingham; "Margaret," by F. Sheldermine, Road End, Greenfield, Near Oldham.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

CAMERA PRICES.

SIR,—Assuming that camera prices *are* cheap and reasonable (and I don't agree that they are) what about the high prices charged for the other essential items in picture-making, i.e., plates (particularly), films and paper?

And can anybody explain and justify the ridiculously high prices charged for such accessories as filter mounts, lens-hoods and film-pack adapters?

This aspect of the cost of photography is often lost sight of, and conveniently so, by the manufacturers, who concentrate on telling the public about the cheapness, etc., of their cameras. The other essentials are rigidly controlled as to retail prices by one of the tightest "rings" in industry.—Yours, etc.

F. A. LIDDINGTON.

FOGGING ROLL FILMS.

SIR,—I have been interested in the discussion on the above subject and should like to bring forward a point which does not yet appear to have been grasped by those who have had trouble, viz., that the backing paper is opaque to all colours and therefore the light which fogs the film must get round the edge of the backing paper.

Some cameras seem to have been well designed and this edge is properly light-trapped; but for the others, I would suggest that they cut a ring of plush or velvet of black or any dark colour, other than red, and glue it to the inside of the back of the camera so that it encircles the red window, and then the backing paper (or the pressure plate) will press against the velvet and stop the light passing beyond that part of the backing paper where the numbers are. The dimensions of the ring will vary with different cameras, but the internal diameter should be the same as the red window and the external as much as possible up to one inch.

Users of the "Rollex" roll-holder will find that any fogging they get will not be due to the red window so much as to the use of red plush as light traps in various places, and particularly where the winding key protrudes. If black plush is substituted for this they should have no further trouble.—Yours, etc.,

VICTOR R. SHARP.

PLATES IN FILM CAMERAS.

SIR,—I am the possessor of a $3\frac{1}{2} \times 2\frac{1}{2}$ roll-film camera, but I quite often find that I want to take a photograph and to see the result a few minutes after taking. For an occasion such as this I keep handy a box of $3\frac{1}{2} \times 2\frac{1}{2}$ plates, and I find that one of these plates exactly fits on the grooves over which the film runs. So I take the camera into the dark-room and after removing the back I place a plate on the grooves and then

replace the back. Care must be taken to block up the red window beforehand with a piece of black paper.

I have shown this method to several of my friends, and it is equally effective with any type or size of camera.—Yours, etc.,
H. A. WAINWRIGHT.

THE DECLINE OF STEREO PHOTOGRAPHY.

SIR,—In your issue of 5th September I notice an article bearing the title "Stereo Photography with Single Lens Cameras."

The opening words of this article, "At a time when stereo photography is definitely declining," are significant, and give food for thought and enquiry. The fact is that stereo photography has never been as popular in Britain as in France and Germany. The reason is not far to seek.

I believe I am correct in stating that no British manufacturer has yet marketed a stereo camera in a popular size and with correct lens separation, whereas the Continental cameras are correct in this latter respect and their film manufacturers have supplied the necessary sizes, at any rate in film packs. On the other hand, the makers of these Continental cameras appear to favour the changing-box system which has never been popular in this country.

Again, the ordinary stereoscope, as sold in this country, is fitted with lenses of unsuitable focal length for viewing contact prints, whereas Continental manufacturers supply a stereoscope to suit their cameras.

A camera I frequently use is a stereo roll film, $4\frac{1}{2} \times 2\frac{1}{2}$ in., taking a No. 116 film, a size which is procurable at any dealers. It has correct lens separation, 63 mm. or $2\frac{1}{2}$ in. An ordinary eight-exposure roll will yield eight stereo prints, each single picture measuring about $1\frac{3}{4}$ in. in width by $2\frac{1}{2}$ in. in height.

Nowadays I usually have them developed and printed in the ordinary way by a dealer (at the usual prices for this size). I merely trim the prints, transpose the two halves and mount them, the mounts being ordinary "invitation cards," which I buy at 2s. per 100.

I have two or three stereoscopes (price 2s. 6d. each), which happen to be fitted with lenses of suitable focal length, and I am able to entertain a number of friends simultaneously.

From the interest displayed in these prints I am certain that very little effort would be needed to popularise this form of photography.

Of course, ordinary enlargements can be made from either half of the stereogram, just as with any other miniature camera.

It is not sufficiently realised that *any* lens separation will give stereoscopic results, but *only one* separation ($2\frac{1}{2}$ in.) will give the same effect that was seen by human eyes.—Yours, etc.,

W. M. LOVATT.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, September 26th.

Camberwell C.C. Jumble Sale.
Luton and D.C.C. Lilley to Hexton.
Partick C.C. Print Criticism.
Rochdale P.S. Night Photography.
Stockport P.S. "Finishing the Exhibition Print." Mrs. Satterthwaite.

Thursday, September 27th.

Hackney P.S. Outing.
Isle of Wight C.C. "The Chemistry of Photography." K. B. Emery.
Northants N.H.P.S. Re-Union at Headquarters, 8 p.m.
N. Middlesex P.S. "The Island of Walcheren." G. Herbert Dannatt.
Stourbridge Inst. P.S. Portfolio—Architecture. E. R. Bull.
Twickenham P.S. "This London or Ours." G. E. W. Herbert.

Friday, September 28th.

King's Heath P.S. "A Chat on Landscape." S. Bridgen.
Leytonstone and Wanstead C.C. Members' Methods—Exposure to Print.
Wimbledon Ciné Club. Members' Evening.

Saturday, September 29th.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

With the Ciné Camera in Autumn

By B. H. BRAITHWAITE.

THE coming of autumn brings unrivalled scope in outdoor work for the cinematographer. Landscapes acquire beautiful tints, and buildings take on a different hue, at this period of the year.

The sun lacks its summer brilliance, consequently foliage becomes deeper in tone. Distant views appear hazy, although near shots and close-ups will not be unduly affected. Town filming requires care in choosing the best viewpoint of the subject in relation to the available sunlight. The sun's rays will seem yellowish, owing to its inability to penetrate satisfactorily the smoky atmosphere so prevalent in large cities. Even so, unexpected detail will be brought out in architecture.

Lighting Effects.

Perhaps the most effective lighting is that which falls on the object to be filmed from one side, giving long, rich shadows, adding interest to the most ordinary shot.

Should morning haze be persistent, filming should be postponed until later, when the sun, reaching its highest point, will most probably break through, revealing wonderful, thin, colourful shadows.

In seascapes, although having the advantage of the sun's reflection from the water for normal shots, the horizon may be hidden in a persistent haze. Gracefully moving shipping, filmed against morning mist, will often make a fine shot.

Successful autumn filming requires care to enable correct exposures being obtained. Actinic light values are often visually misleading, especially in the early morning and late evening, when the shadows are long. Heavy shadows must be allowed for to enable correct rendering of the half-tones necessary for a successful positive. Scenes which owe their charm to colour alone may be deceptive photographically and tend to become disappointing when reduced to monochrome.

The use of panchromatic film, used

in conjunction with the appropriate filters, is a distinct asset in outdoor work in the late months of the year. Truer colour renderings, so necessary at this period, are possible by its use. Red and orange colours do not film too dark, grass and foliage appear in more correct tone, and each scene takes on an added sparkle.

Panchromatics.

When employing panchromatic film, if use is made of the filter, it may be necessary to set the lens stop to the next higher opening than that to which it would normally require. For instance, if the strength and quality of the light indicates by the exposure meter the use of $f/8$, then set the diaphragm to $f/5.6$. Excepting for this, panchromatic film is used

in exactly the same way as ordinary film. In many cases, however, it will be found that the filter is unnecessary when pan. material is used. This occurs when shots are made late in the day and the light itself is yellow in character. It is then that this film scores both in the matter of speed and colour rendering.

Giving increased naturalness over orthochromatic, panchromatic film renders tones more accurately, by registering them in much the same depth as the colours one sees.

Though the hours available for outdoor filming become somewhat restricted owing to the evenings being shorter, subjects which are definitely enhanced by autumn lighting are numerous and are excellent material for the skilful amateur.

An autumn sky-line. This type of landscape provides a very attractive action subject for the amateur ciné-worker at this time of year.

Winter Sessions in Ciné Studios

By M. A.
LOVELL-BURGESS.

WINTER sessions are about to begin in the amateur ciné studios, and secretaries are busy planning programmes and arranging talks.

The issue before many a club secretary this month lies between documentary or story films. Some clubs have already decided to work only on documentary films this winter. Others intend to specialise solely in story production. Personally, I believe the best arrangement is to have two units—more, if funds will allow it—one devoted to interest films and the other to film-play production.

It is true that documentary films offer a wide field to the ciné amateur, whether from a social, industrial, scientific or educational angle. Every town or village can provide subjects in this direction. Here is a simple way to discover a documentary subject. Every town has its own "atmosphere." Bournemouth is vastly different from, say, Birmingham. What are the outstanding characteristics of your town? What was it that in course of time developed those characteristics? Your answer may be in terms of modern or ancient history. Your film may be a mining epic, an island story, a rich pageant of ecclesiastical history. It may show the building of a ship or of those dormitories that we call suburbs. Whatever your subject it will be presented by

living men and women. It will be a documentary film.

There are two ways of making a documentary film. There is the news-reel type which faithfully reproduces given objects, and there is the film which, by means of angles, cutting and editing, dramatises objects to convey impressions. The only thing forbidden in the making of documentary films is faking.

It is unfortunate that so often when ciné amateurs set out to make documentary films their documenting is done in an intensely morbid mood, with the object of stampeding an unsuspecting audience into becoming supporters of some particular cause.

I am as much suspicious of the word "purpose" applied to the making of a film as I am of the moral at the end of a story. Purpose usually means putting over somebody else's point of view. A film studio without a play production unit is like a library without a novel—far too serious.

A story, all through the ages, has provided a means of escape. And although psychologists tell us it is not wise to stimulate emotions if they are not to be translated into action, experience has proved that a reasonable use of novels, plays and films has a beneficial effect. Men, women, even children, are always seeking, often subconsciously, a way out from the monotony, routine, and many com-

pulsions of life by means of stories. Imagination so used, blesses him that gives and him that takes. It masks, for a time, our limitations, and we are enabled to go back to the compulsions of life's routine all the stronger for our temporary respite.

It is true that amateurs need to produce better story films than they have done. Subject should be more carefully considered in relation to market or possible market. Many an amateur story film starts off as a thriller, borders on burlesque, adds a ghost to liven things up, introduces a comic policeman to give the funny member of the club his chance, and ends up as a solemn drama. Character is to be preferred to plot if one or the other must dominate, but if you don't happen to have people of outstanding personality in your club, do have a good plot.

Judicious make-up—not of the pretty-pretty type—can do a great deal to compensate for the serious fact that types are necessarily limited in a ciné society. Bear in mind that make-up should be able to interpret the mind. Your make-up specialist should be a psychologist. He should know the lines that tell of weariness or grief in the young; of the ageing mind as well as the ageing body. Special attention should be paid to the eyes. Bold lines and shadows are effective in stage make-up but the camera calls for subtle light and shade.

ACTION SUBJECTS for the AMATEUR CINEMATOGRAPHER

The Amateur Photographer and Cinematographer's Diary of Forthcoming Events.

FORTHCOMING EVENTS DURING OCTOBER, 1934.

THE NEW

"KINOX"

CINÉ PROJECTOR

FOR RELIABLE MOVIES...

No. 5480.

ZEISS IKON PROJECTOR, 16 mm.
SUITABLE FOR KODACOLOR.

THIS MODEL IS SPECIALLY designed for the projection of KODACOLOR FILM. This Zeiss Ikon Projector is not only eminently suitable for this class of projection, but it is the **cheapest projector of its kind for the purpose.** Simple in manipulation—easy to thread—runs off ordinary house lighting—all optical parts are accessible for cleaning.

Price, complete with accessories and carrying-case £35 7 6

Also available for ordinary black-and-white films from £24 10 0

ZEISS IKON LTD.

11, MORTIMER HOUSE, MORTIMER ST., LONDON, W.1

PAILLARD
BOLEX

NEW INTRODUCTIONS

Model "C" for 16-mm. films, fitted with 250-watt air-cooled projection lamp, ample illumination for screens up to 6 ft. wide.

Instantaneous "still" picture device. One touch of a trigger stops the mechanism dead on the selected picture, a mere turn of a knob restarts it at proper projection speed.

Automatic reverse action. Beautifully silent running.

PRICE: Ready for 110-volt mains £24:0:0
(Resistance for higher voltages, 37/6)

Model "P.A." for 9.5-mm. films, the same as for 16-mm. films but incorporating a mechanism automatically stopping on 9.5-mm. notches PRICE £24:0:0

FOLDERS
FREE.

CINEX LTD., 70, High Holborn, London, W.C.1

SERVICE AND VALUE

FOR CASH—EXCHANGE—OR TERMS

"AMPLUS" VERTICAL ENLARGER

A compact and simple instrument, occupies very little space in the dark-room. With fine and coarse focussing adjustments and easel embodied. Supplied with gas or electric light fittings.

Form A, for use with your own camera.

Form B, to accommodate your own lens.

Form C, complete with lens.

PRICES, No. 2 "Amplus" Enlarger :

| | 3½ × 2½ in. | 4-plate. |

"PHOTOSKOP"

For "still" or "cine" cameras. The Photoskop gives a direct reading without reference to tables.

£5 : 5 : 0

12 payments of 9/2 per month.

"OMBRUX" METER

For all "still" photography. Gives direct readings under practically all lighting conditions. **£4 : 4 : 0**

"BLENDUX"

For cine work. **£4 : 4 : 0**

12 payments of 7/6 per month.

PLEASE MENTION "THE AMATEUR PHOTOGRAPHER" WHEN CORRESPONDING WITH ADVERTISERS.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Hon. Secretary of the Stourbridge Institute Photographic Society is now Mr. H. P. Newland, in succession to Mr. L. F. P. Trueman. His address is 2, Albion Street, Brierley Hill, South Staffs.

Camera Clubs, Beware. Ashington Camera Club has received a summons and paid a fine. The outing, arranged annually, was a motor-bus run, through country lanes and old villages to Hexham. More than forty names—over a bus load—were obtained privately, and it was decided to place a notice in a free advertising sheet, in order to make the number up for the second bus. This action brought the Club within the clutches of the law and a fine of five shillings had to be paid. By the advertisement, the outing was ruled to be a public instead of a private one. The Club pleaded ignorance of this ruling, and the fine was therefore nominal. It was not stated in the court how much valuable time and shoe leather had been spent by the police interviewing members of the Club and others, in obtaining the necessary information to justify the prosecution. Five shillings would not cover it.

Among many attractive cameras put on the market recently the "Vauxhall de Luxe" deserves careful attention, especially in view of its low price. It takes sixteen exposures on standard $3\frac{1}{4} \times 2\frac{1}{4}$ roll film. The lens is an f/2.9 Meyer "Trioplan" in a Compur shutter, with delayed action, and the usual range of speeds from 1 sec. to 1/250th, with, of course, T. and B. settings in addition. Pressure on a spring causes the front to spring and lock in the working position; focusing is done by revolving the front component of the lens, various distances down to 5 ft. being scaled. The case is of walnut coloured bakelite, and although a hard blow would be required to damage this, any such unfortunate contingency is provided for, as spare parts are available, and the cost even of a complete body is trifling. The price of the camera as specified is only £5 19s. 6d.; an ordinary leather case is 6s. 6d.; and an "ever-ready" case, 12s. 6d. It is a delightful outfit to use and is capable of producing the finest results. It is being supplied by The Camera Co., 320, Vauxhall Bridge Road, Victoria, S.W.1.

Great alterations have taken place at the premises of the Hampshire House Society in preparation for the winter season. They have been made possible by the fact that the Society has lately acquired the freehold of its premises, and is prepared to sink capital into them. The large lecture-hall on the ground floor has been completely redecorated and re-equipped; it is now suitable for a variety of pursuits; stage lighting has been installed for dramatic purposes, and the walls have been re-covered for exhibition work; the stage may also be used for lectures and lantern lectures, while the wall at the back is convertible either for exhibition pictures or as the lantern screen. A control room has been built at the back of the hall with provision for a 16-mm. ciné projector. A D.C. current converter has also been installed, and beautiful indirect 10-ft. candles lighting illuminates the walls from above, so that there will be no trouble in the viewing of pictures.

The installation of hot-water heating in the dark-rooms may also be mentioned. The library has expanded into the small lecture-room, and a reading-room is now available. The studio is being remodelled, and it is probable that drawing classes, for all who think it will improve their photography, may be held once a week through the winter. Particulars of membership are obtainable from the Hon. Secretary, Hampshire House, Hog Lane, Hammersmith.

A new session of the photographic classes for elementary and advanced students at the Battersea Polytechnic, Battersea Park Road, S.W.11, has just started. Mr. Edgar Senior is again in charge of the course of instruction, which is a most thorough one, and the fees are very moderate. The Photographic Department of the Polytechnic is well equipped and the classes cover a very complete range of subjects, both theoretical and practical. The syllabus will be sent free on application to the above address.

The Forest Hill Photographic Society is starting a postal portfolio. They hope it will appeal to country photographers who are unable to belong to a club. Full particulars will be sent on application to the Hon. Secretary, C. W. H. George, 20, Gordonbrock Road, London, S.E.4.

Ilford, Ltd. have recently put on the market two new films: Selo Fine Grain Panchromatic film and Selo Hyper-sensitive Panchromatic roll film and film packs. We hope to report more fully on these introductions after making practical tests.

The Harrow Camera Club, which is comparatively new and very keen, is anxious to attract further mem-

bers living in the neighbourhood, beginners being especially welcomed. An interesting winter programme has been arranged, which includes popular and technical lectures, and monthly competitions are held regularly for pictorial work. Meetings are held in the Conservative Hall, Lowlands Road, Harrow, on Tuesdays at 8 p.m. Further particulars may be obtained from the Hon. Secretary, Mr. C. W. Johnson, 4, Sheepcote Road, Harrow.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, September 29. Rules in this issue.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1-10; (Osaka), October 20-26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8-October 6. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8-October 6. Secretary, 35, Russell Square, London, W.C.1.

P.P.A. Annual Exhibitions, Royal Institute Galleries, 195, Piccadilly, W.1.—"Modern Portraiture," open, September 19-29. Secretary, A. F. Bucknell, Sundial House, 357, Euston Rd., N.W.1.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton St., Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9E).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakow.—Open, August 26-September 30, 1934. Secretary, Fotoklub Polskiej, Y.M.C.A., Krakow, Krowoderska, 8, Poland.

Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26-December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 19; open, December 10-15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography. Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotográfica de Madrid, Calle del Principe, 16, Madrid, Spain.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester.

City of London and Cripplegate P.S. Annual Exhibition.—Closing date, February 11; open, March 11-16. Exhibition Secretary, J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, October 6. Particulars from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Spoilt Negatives.

I enclose two negatives out of eight similar ones. Can you tell me what is likely to have gone wrong with them? I have had no trouble with other films developed according to the method described herewith. Will Farmer's reducer clear the fogging?
W. W. W. (Cricklewood.)

It is a pity that amongst all the information you have given you should not say what film you were using. Judging by appearances it is a panchromatic film, and in that case it was inevitable that you would ruin the negatives. Nothing you can possibly do will put them right, as you will observe that the image is a positive instead of a negative one. We would suggest that you do not attempt to use new material without making yourself familiar beforehand with its properties and the methods of dealing with it. Panchromatic film cannot safely be handled like ordinary film.

Flashlight Exposures.

Provided the subject is focussed correctly, what is the best aperture to use when taking by flashlight. Would I over-expose by using $f/4.5$ instead of $f/11$ or $f/16$ as would be the case when taking by sunlight?
H. R. T. (Blakeney.)

You seem to be under a complete misapprehension as to the exposures by flashlight. What you have to do is to decide first of all the aperture that must be used to get the necessary definition, and then to adjust the amount of flashpowder accordingly. If a certain quantity of powder were sufficient with the stop $f/11$, you would want twice as much with the stop $f/16$.

Wooden Dishes.

What is a suitable paint for making wooden dishes waterproof?
W. G. T. (Waltham.)

Ordinary paint is of no use for the purpose you mention. It is more usual to impregnate the wood with paraffin wax worked in with a hot iron. Another method is to size the wood, and give it

at least two coats of the anti-sulphuric enamel, to which we have often referred in our columns, and which can be obtained from Messrs. Griffiths Bros. & Co., Ltd., Macks Road, Bermondsey, London, S.E.16. The joints must be close and well fitted in the first instance, or no after-treatment will be satisfactory.

Taking Cameras Abroad.

I am going to Spain for a short holiday, and would like to take a camera with me. Shall I have any trouble in doing this?
R. H. F. (Balham.)

As far as we know you will have no difficulty in taking your own camera into Spain, or in bringing it back into this country. It would be advisable, however, for you to take, if possible, the invoice showing when and where you bought it. We believe also that on leaving England the Customs officials will write identifying particulars of your camera on your passport, and this will facilitate getting it through on your return. The Customs regulations are not directed to hampering photographers, but to prevent the importation of new cameras without payment of the duty to which they are liable.

London Societies.

Will you send me particulars of photographic societies in London?
G. Z. (London, S.W.)

We regret that we cannot give you a full list of all the photographic societies in London; they will be found in any volume of *Photograms of the Year*. Societies in the S.W. of London open to all photographers are as follows: Chelsea Photographic Society, Secretary, F. A. Perkins, 73, Mountholme Road, S.W.11; Streatham and District Photographic Society, Secretary, H. C. Wilkinson, 29, Pendle Road, Streatham Park, S.W.16; Wimbledon Camera Club, Secretary, J. H. Reeves, 29, Richmond Avenue, S.W.20. The secretaries will be

pleased to furnish you with full particulars, and we trust one of these societies will fulfil your requirements.

Special Shutter.

Can you tell me where to obtain a focal-plane shutter to work just behind the lens and give a speed of $1/5,000$ th of a second?

C. J. F. C. (Bridgwater.)

We know of no shutter giving anything like the exposure you name, and it would be quite out of the question to work a shutter of the focal-plane type behind the lens. It must be as near the actual focal plane as possible. You do not seem to realise that with a lens working only at $f/4.5$ such an exposure would be quite inadequate even on the fastest film or plate made.

Daguerreotype.

I removed the tarnish from a Daguerreotype by the method I describe, but the image has almost disappeared. Can I intensify it?
G. B. (London.)

The renovation of a Daguerreotype portrait is a somewhat risky procedure even in the hands of experts. The treatment you adopted has probably ruined yours beyond all remedy, and we know of no possible means of restoring the image.

Commercial Photography.

As I intend going in for commercial photography could you inform me of a journal dealing with the subject?
S. A. B. (Londonderry.)

Messrs. Kodak, Ltd., Kingsway, London, W.C.2, publish a monthly magazine dealing with commercial photography, and this is the one we should recommend you to get. Please note that enquiries intended for the editorial department should not be included in communications to the advertisement department, and that all enquiries should be accompanied by a stamped addressed envelope.

Cheap Papers.

I have been trying some cheap papers, but find I cannot get such good results. Is this because they are not as good as well-known makes, or am I not working them correctly?
W. H. L. (London.)

We cannot lay down any general principle about the quality of cheap papers. Some are certainly excellent value for the price charged, while others we do not consider satisfactory if really good work is desired. There are certainly some cheap papers on which it is quite impossible to get results equal in quality to those made on better-class products. It is largely a question as to whether the results are good enough for the purpose required, and this is a matter for experiment and personal decision.

D. and P.

As I find commercial developing and printing terribly expensive I would like to do my own. Would you submit a complete and detailed list of materials for the purpose?
L. J. (Welling.)

We cannot possibly in the form of a reply tell you how to set to work to do your own developing and printing. Your only course is to get a good textbook such as "Photography Made Easy," by R. Child Bayley (obtainable from our publishers, price 2s. 3d. post free), and see what apparatus you require and what procedure you must adopt. A mere list of apparatus and materials would not help you much.

The Amateur Photographer and Cinematographer

Annual Lantern-Slide Competition - 1934

Closing Date:
WEDNESDAY, OCTOBER 31st.

Classes and Subjects.

- CLASS I.—Landscape, with or without figures, sea subjects and river scenery.
- CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.
- CLASS III.—Architecture, interior and exterior.
- CLASS IV.—Flowers, fruit and other "Still-Life" subjects.
- CLASS V.—Natural-history subjects.
- CLASS VI.—Lantern slides in colour (not hand-coloured).
- CLASS VII.—Champion class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* Lantern-Slide Competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{2} \times 3\frac{1}{2}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstance can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Wednesday, October 31st. The slides must be well packed, and addressed "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

ENLARGE

YOUR SUMMER NEGATIVES with the MIRAPHOT

Zeiss Ikon, always foremost with precision instruments, offer a varied selection of high-class enlargers.

First, the MIRAPHOT, a vertical automatic focussing enlarger in two sizes, for negatives any size up to 9×12 cm. ($4\frac{1}{2} \times 3\frac{1}{2}$ in.), and up to $3\frac{1}{2} \times 2\frac{1}{2}$ in.

With the Miraphot manipulation is simple. The lenses give perfect definition and, thanks to the scientifically designed reflector, illumination is even and negatives require practically no retouching.

The Miraphot is also made in baby size for $1\frac{1}{2} \times 1\frac{1}{4}$ in. negatives.

With Zeiss
Tessar f/4.5

Model 1444

£13 17 6

Model 1445

£10 2 6

... or the MIRAX ENLARGING ATTACHMENT

Price for $4\frac{1}{2} \times 3\frac{1}{2}$ camera, including lamp, £2 17s. 6d., for horizontal use as illustrated, or with easel for vertical use, £4 17s. 6d.

Adapter for $3\frac{1}{2} \times 2\frac{1}{2}$ in. or $3\frac{1}{2} \times 2\frac{1}{2}$ in. cameras, 2s. extra.

The MIRAX is an all-metal enlarging attachment which utilises your roll-film or plate camera from $3\frac{1}{2} \times 2\frac{1}{2}$ to $4\frac{1}{2} \times 3\frac{1}{2}$. It can be used horizontally, as illustrated, or vertically with the Mirax vertical easel. It gives powerful illumination, consequently short exposures, and it is the most economical way of obtaining a first-class enlarger.

Write for details of Zeiss Ikon enlargers, and booklet will be sent to you.

London, W.1

The Amateur's Emporium

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 2333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; £60, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

Notes being untraceable if lost in transit should not be sent as remittances.

& Co.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'". Replies should be addressed: "Box 000, c/o 'The Amateur Photographer', Dorset House, Stamford Street, London, S.E.1." and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of a sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1. and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 213, Fore Street, Edmonton, London, N.13.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

A NEW Leica, latest Model III, chrome, f/3.5 Elmar; catalogue price £26/4; would accept £18.—Box 1624, c/o "The Amateur Photographer." [3815]

FOR MINIATURE CAMERA NEGATIVES

'PRAXIDOS'

VERTICAL ENLARGERS WITH OR WITHOUT CONDENSERS.

PRAXIDOS 'O' Semi-Automatic

The Semi-Automatic Praxidos can be set for any degree of enlargement without the slightest trouble. There is no wire cable, no counter-weight. The lamp-house can be raised or lowered by releasing a lever and is automatically locked in place when the desired size of enlargement is obtained. Focussing is completed by using the helical focussing mount of the lens.

No. 453, Praxidos O, with 6-cm. f/4.5 anastigmat lens, for 4×4 cm. (1½×1½ in.) or smaller negatives. 1½ to 8 times **£7:12:6** (linear). . . .

No. 463, Praxidos O, with 7.5-cm. f/4.5 anastigmat lens, for 6×6 cm. (2½×2½ in.) or smaller negatives. 1½ to 6 times **£8:5:0** (linear). . . .

No. 473, Praxidos O, with 10.5-cm. f/4.5 anastigmat lens, for 6.5×9 cm. (2½×3½ in.) or smaller negatives. 2 to 7 times (linear) **£13:2:6**

AUTOMATIC PRAXIDOS

Praxidos Automatic Enlargers give mathematically exact focussing—making pin-sharp enlarging virtually as simple as contact printing and eliminate the eye-strain and uncertainty of "hand-and-eye" focussing.

No. 502, Praxidos with 6-cm. f/3.5 anastigmat lens, for 4×4 cm. (1½×1½ in.) or smaller negatives. 2 to 10 times **£14:12:6** (linear). . . .

No. 506, Praxidos with 7.5-cm. f/3.5 anastigmat lens, for 6×6 cm. (2½×2½ in.) or smaller negatives. 1½ to 7 times **£15:0:0** (linear). . . .

No. 491, Praxidos with 10.5-cm. f/3.5 anastigmat lens, for 6.5×9 cm. (2½×3½ in.) or smaller negatives. 1½ to 7 times (linear) **£20:0:0**

Write for Prospectus giving full particulars of condensers, etc.

| | |
|--|---------|
| 80-mm. Single Condenser for 4×4 cm. size Praxidos, | £1 1 6 |
| 95-mm. " " " 6×6 cm. " " | £1 14 6 |

| 95-mm. " " " 6×6 cm. " " | £2 8 6 |
| 130-mm. " " " 6.5×9 cm. " " | £3 2 6 |

K.W. MASKING FRAME

The K.W. Masking Frame is suitable for all vertical enlargers as the paper remains in the position of focus. Notches in the masking strips allow of instant setting to the standard sizes of prints to 10×8. Widths of margins up to 1½ in. The solid build and wide bearings of all moving parts ensure regular "squariness" of the prints.

Price **£3:3:0**

Obtainable from any Photographic Dealer, or:

Optochrom

LIGHT FILTERS

OPTOCHROM Filters are made of optical glass coloured throughout its entire mass during manufacture. They are not, therefore, affected by heat or damp, as are gelatine filters mounted between glass.

OPTOCHROM Green Glass Filters are recommended for use with Panchromatic Plates or Films of all kinds.

OPTOCHROM Yellow Glass Filters are for use with Orthochromatic Plates or Films. They are supplied in four different densities: No. 0 Extra Light, No. 1 Light, No. 2 Medium, No. 3 Deep, also as the REFORM, a filter graduated from clear glass to deep yellow. No extra exposure is necessary with the Optochrom Reform filter.

The OPTOCHROM U.V. Filter is for use on snow subjects and distant views, no extra exposure is necessary when using a U.V. Filter.

OPTOCHROM Red Glass Filters are made for use when photographing highly-coloured objects, or when extreme contrast is required from Panchromatic Plates or Films.

ILLUSTRALIGHT Sets for Pathe Home Movie Projectors will positively enable a 6-ft. picture to be shown with ease, and without damage to "still" titles; this system uses a lamp of a new type and highly efficient reflecting device, a new type condenser, and the whole in a lantern of the same diameter, but one inch longer; fitting takes but a few seconds. Type A, for use with 12-volt accumulators, 40/-; Type B, for use with A.C., 60/-; Type C, Universal Model, A.C. or D.C., 65/-; actual current consumption 3 amps. at 12 volts.

WE are happy to state that many of our sales of the "Illustralight" Sets are to friends of purchasers; this speaks for itself.

ILLUSTRACHROME Multi-Colour Wheels will give your movies a professional touch, atmospheric effects and colour changes without shadow; price, including fitting for Home Movie, 5/-; B-200 type, 6/-.

ILLUSTRASCREENS, with highly reflective super silver Projection surface, with rollers and battens, framed sides, with ingenious stretching device, assuring a flawless picture area and maximum brilliance, rigid but portable, easily dismantled after the show: 30 x 40 20/-, 36 x 48 25/-, 48 x 48 30/-, 48 x 60 40/-, 48 x 66 45/-, 52 x 72 55/-, 60 x 84 70/-, 72 x 96 96/-, any size made to order.

MOTION Picture Equipment for 9, 16 or 35 mm., we can always be counted upon to supply any plant needed for cinematography.

EVERYTHING for Movies.—Cameras and Projectors from 20/-; Screens from 5/-.

ILLUSTRATE ENTERPRISES, 159, Wardour St., London, W.1 (facing Film House, Oxford St. end), not a shop, but a warehouse packed with motion-picture equipment; your inspection invited. Phone, 6889 Gerrard. Free parking facilities. [3896]

Vol. LXXVIII.

Wednesday, October 3rd, 1934.

No. 2395.

A Rolleicord Picture

Such an inviting subject—but how often the result disappoints—unless, of course, you are using a Rolleicord. For the Rolleicord, possessing many of the well-known features of the famous Rolleiflex, make mistakes almost impossible. Parallax compensation, one-lever Compur shutter, ground-glass screen showing picture actual size—these are only a few of the refinements you get at the amazing price of

£10 : 10 : 0, with Zeiss Triotar F/4.5 lens.

Patented leather case for £1 extra.

Your Dealer will gladly demonstrate; or write for beautifully illustrated brochure from the Sole Importers:

Our stocks of used bargains are unequalled anywhere to-day. Every article is fully guaranteed in good mechanical condition, and is allowed on 5 days' free approval to post-buyers against full cash deposit.

'ENSIGN' MAGNAPRINT

The Ensign super-speed condenser enlarger. Metal throughout, except solid black baseboard, metal parts silk enamelled finish or plated. Double-lined lamphouse fitted with lamp-holder. In both sizes the carrier is provided with masks for 3 1/2 x 2 1/2, vest pocket, half vest pocket (3 x 4 cm.), and Leica negatives, Model H/2 having an additional mask for 3 1/2 x 4 1/2.

3 1/2 x 2 1/2, with Ensign f/6.3 anastigmat. £5 5 0
 4-plate, with Ensign f/6.3 anastigmat. £7 10 0
 Nine monthly payments of 12/3 or 17/6.

V.N. ENLARGER

With semi-automatic focussing, a large lamphouse, sturdily designed. Fitted with Dallmeyer f/4.5 anastigmat lens, in focussing mount.

4-plate to 15 x 12. £9 15s.
 3 1/2 x 2 1/2 to £8 15s.
 12 x 10. £9 15s.
 Nine monthly payments of 22/10 or 20/6.

ZEISS IKON

'MIRETTE' ENLARGER

An ideal precision-made enlarger for the owners of miniature picture cameras. All-metal body, sliding on base plate, special Zeiss Ikon anastigmat in focussing mount, condensers, special opal, gas-filled lamp. Complete with lamp. £5:12:6
 Nine monthly payments of 13/2.

LEICA 'FOCOMAT'

With automatic focussing. With effortless speed this enlarger will give perfect pictures from your Leica negatives whether you want enlargements to the size of 3 1/2 x 2 1/2 in., or up to 12 x 10 in. The diffused illumination gives soft, harmonious enlargements. For use with Leica Camera lens £13:19:6
 Nine monthly payments of 32/7

PICCOCHIC ENLARGER

For Piccochic and other 3 x 4 cm. negatives. With condenser, electric fittings, and metal mask, 8 magnifications, f/6.3 anastigmat lens, in focussing mount, iris diaphragm and paper board. £5:17:6
 Nine monthly payments of 13/8.

9.5-mm. Pathe Luxe Motocamera, f/2.5 anastigmat, Tele-negative element, and leather case. £13 17 6
 8 x 32 Aitchison Prism Binoocular, centre screw focussing and leather case. £4 17 6
 Pathe Projector, complete with motor, super reel attachment, twin resistance. £28 7 6
 Zeiss Double Protar f/6.3, 5-in., Compound shutter. £22 7 6
 1-pl. Soho Reflex, Carl Zeiss Tessar f/4.5, Kershaw focal-plane shutter, 3 slides and case. £15 0 0
 3 1/2 x 2 1/2 Folding Pocket, f/6.3 anastigmat, Vario shutter, double extension, 3 slides. £1 10 0
 4-pl. Imperial Conical Field, triple extension, Aldie f/8, C. & G. wide-angle lens, T.P. shutter, 3 D.D. slides, tripod and canvas case. New condition. £3 15 0
 3 1/2 x 2 1/2 Ensign Roll Film Reflex, f/6.3 anastigmat and case. £1 19 6
 Three-valve Ultra D.C. All-mains Receiver, excellent condition, splendid value. £27 17 6
 3 x 2 Cocarrete Roll Film, f/4.5 Nettel anastigmat, Compur shutter and leather case. £3 0 0
 3 1/2 x 2 1/2 Ensign Carbine Roll Film and Plate, Carl Zeiss Tessar f/4.5, Compur shutter, 6 slides, P.P. adapter and leather case. £9 9 0
 5 x 4 Goerz Anschütz Focal-plane, Celor f/4.8, focal-plane shutter, 3 slides and leather case. £5 17 6
 3 1/2 x 2 1/2 Speed Roll Film Reflex, Ensign f/4.5, self-capping focal-plane shutter. New condition. £5 17 6
 Four-valve Pye G All-mains Receiver, A.C., very selective. New condition. £7 19 6
 3 1/2 x 2 1/2 T.P. Horizontal Reflex, Dallmeyer f/4.5, self-capping shutter, 3 slides. £6 17 6
 2 1/2 square Rollei-flex, Carl Zeiss Tessar f/3.8, Compur shutter, filters and leather case. £13 17 6
 3 1/2 x 2 1/2 Ikonta Roll Film, f/6.3 anastigmat, speeded shutter. £2 7 6
 3 x 4 cm. Baby Ikonta, Novar f/4.5, speeded shutter. £2 2 6
 16-mm. Ensign Silent Sixteen, 180-watt lamp, motor drive, resistance to 250 volts. £15 0 0
 16-mm. Model C Kodascope, motor drive, resistance to 250 volts. £27 17 6
 16-mm. Bolex Projector, 250-watt lamp, motor drive, resistance to 250 volts. £14 17 6
 4-pl. Horizontal Enlarger, f/6.3 anastigmat, long extension, 54-in. condenser, electric fittings. £5 8 9

THE HOME OF HOME MOVIES.

 16-mm. Model B Cine-Kodak, f/1.9 Kodak anastigmat, focussing, direct-vision finder, Kodacolor unit and leather case. £13 17 6
 16-mm. Model 70D Bell & Howell Film, 1-in. f/1.8 Cooke, 1-in. f/3.5 Cooke, 4-in. f/4.5 Dallmeyer lenses, adjustable speeds, direct-vision finder, motor drive, complete in Mayfair case. £62 10 0
 9.5-mm. Pathe Hand-turn Camera, f/3.5 anastigmat £1 6 9
 Complete Pathe Outfit, comprising double-claw Projector, super attachment, motor and twin resistance. £28 5 0
 3 x 4 cm. Foth-Derby Focal-plane, f/3.5 anastigmat, focal-plane shutter, 1/250th to 1/600th, direct-vision finder. £3 12 6
 4 x 6 cm. Nettix Folding Plate, f/6.3 anastigmat, speeded shutter, 1/250th to 1/100th, 6 slides, F.P. adapter. £1 11 6
 1a Kodak Special, f/6.3 Kodak anastigmat, Compur shutter, 1 to 1/250th sec., range-finder, rising front. £3 3 0
 Leitz Leica Model III, f/3.5 Elmar anastigmat, focal-plane shutter, with slow speeds, synchronised range-finder, filter and leather case. £18 10 0
 Vest Pocket Cocarrete Roll Film, f/4.5 Zeiss Tessar anastigmat, Compur shutter, 1 to 1/300th sec., focussing, brilliant finder. £4 10 0
 Universal Finder and Leitz Leica Camera. £2 5 0
 5-cm. f/2.5 Hektor Lens, for Leica camera. £5 15 0
 1a Voigtlander Bessa Roll Film, f/6.3 anastigmat, delayed-action speeded shutter, self-erecting front. £22 5 0
 4-pl. Lizars Enlarger, f/4.5 Aldis anastigmat, rack focus, 54-in. condenser, electric fittings. £4 17 6
 4-pl. Speed Kodak Focal-plane, f/6.8 Goerz Dagor anastigmat, self-capping shutter, speeds to 1/1,000th, direct-vision finder, plate back, 1 D.D. slide. £2 3 0
 4-pl. Goerz Anschütz, f/3.5 Goerz Dagmar, self-capping shutter, direct-vision finder, screen, 3 D.D. slides, F.P. adapter and case. £17 17 0
 Leitz Leica Model II, f/2.5 Hektor anastigmat, synchronised range-finder, complete with case. £16 5 0

'BOLEX' G.916 PROJECTOR

For both 9.5-mm. and 16-mm. Films.

This machine is entirely gear driven, there being no belts whatever. When fitted with a 50-volt 200-watt lamp and the equivalent of a three-bladed shutter, the screen luminosity is 130 lumens.

£46

Nine monthly payments of £5 7s. 4d.

IF IT'S NEW—WE HAVE IT! KODASCOPE 'D'

16-MM. PROJECTOR
 Complete with 300-watt lamp. Fan - cooled. Automatic rewind. Beautifully finished in bronze. Gives silent, clear, and flickerless projection.

£25

Nine monthly payments of 58 4.

PATHÉSCOPE '200-B' PROJECTOR

With 200-watt lighting. Picture 10 ft. wide easily obtainable. Flickerless projection, sprocket-fed. Threading one side only. Single nut tilting device. Works off 110 volts. With lamp, plug, flex, adapter and one empty 300-ft. super reel. £15

Nine monthly payments of 35/-.

VOL. LXXVIII. No. 2395.

READERS are reminded that only a few more days remain during which they have the opportunity of seeing the two big autumn shows in London—the Royal and the Salon. Both these exhibitions close on Saturday, October 6th. The P.P.A. display of professional portrait work at Princes Gallery closed last week. The attendances at the shows have been very good this year, but there are doubtless many readers of "The A.P." who have not yet seen either of those still open, and it is specially to these that we offer the above reminder. If, therefore, the occasion presents itself for visiting the Royal at 35, Russell Square, or the Salon at 5a, Pall Mall East, before the end of this present week it should not be neglected. They are both well worth careful attention by every amateur who is really interested in the best photographic work of the year.

The Size of the Exhibition Picture.

Looking round—a final glance—at the present exhibitions, we wondered what it is that dictates the size of the exhibition picture. There must be some hidden convention, for nearly all exhibition pictures are of about the same size. Perhaps at the Salon the acreage is a little larger than at the Royal, but there is very little in it. If a picture is very much larger or very much smaller than that conventional size it loses interest. Mammoth enlargements such as are shown by commercial firms would in any case be unsuitable for ordinary exhibition, since only a score or so of them could be accommodated in the gallery, but even so the interest of each work would be in inverse ratio to its size. In the same way an exhibition

TOPICS of the Week

LONDON LANDSCAPES (No. 27).
An Autumn scene in St. James's Park.

in quarter-plate or half-plate would be irritating and confusing. Something dictates the size of the picture shown on exhibition walls. It must be something which the visitor can take in as a whole, without undue strain in focussing his eyes, and something large enough to be detachable at a comfortable distance from the other works surrounding it.

Among the Societies.

Renewed activity among the photographic societies is in evidence on all sides. The beginning of the autumn and winter session has again been productive of a large batch of fixture lists for lectures and demonstrations, and there are indications that the numbers of evening meetings to be held in all parts of the country during the next few months will be in excess of those of any recent year. This is a good sign that shows not only a steady interest in photography among British amateurs, but is indicative of the healthy condition of the societies themselves; it suggests that many recruits have been added to the membership rolls. It is to these new members, many of whom are beginners, that we look for the sustained enthusiasm which keeps amateur photography alive and flourishing, and it is the well-conducted society that is invaluable in satisfying the desire for knowledge that all keen beginners possess. Every new photographer should join a society, and now is the best time to do so. We shall always be pleased to put him in touch with the nearest in his locality.

Autumn Nights.

These early autumn nights are perhaps the best time of the year for the night photographer. There

is a mellowness in the atmosphere—the train of glory of departing summer. The trees are not yet stripped of their leaves, and lamp-light through leaves can be woven into a very engaging pattern. We have been looking at some night photographs of places abroad, where the air is much clearer than in this country, and where the lights—the sky signs, the street lamps, the illuminated fountains—shine out with a distinctness rarely seen here. The lights are seen as little punctures in the surrounding dark, each glowing bulb an emphatic point, the whole thing appearing like a string of diamonds, with a diamond-like hardness. The subject is charming in its way, but it lacks some feeling, some softness, which the English night scene offers

to the pictorialist. It is merely a pattern, not a picture; it is something like a page of music, not a pictorial composition. Give us the English night every time.

Interruption.

Our Geneva correspondent writes: You may have seen in the papers that the League of Nations has been debating a wretched little war which has been raging for two years in the middle of South America, between Bolivia and Paraguay. Oh, the oceans of talk which have flowed around this struggle, when the representatives of fifty nations have tried hour after hour to bring about a settlement. The other day, after a big discussion, the delegates were just leaving when their attention

was directed to a little scene in the garden of the Secretariat, where a "talkie" film was being made. An elegantly-dressed French lady was delivering an address in front of a microphone, while a cinematograph camera followed her graceful gestures. She was just in the middle of a moving passage when someone in attendance on the straggle of apparatus which cumbered the place let loose a sneeze so mighty that it must have split the sound track. The whole affair dissolved in laughter, and among those who laughed most were the delegates from Bolivia and Paraguay who had been looking out of a window in the corridor. As they went away laughing, one rather hoped that in that laughter they might find a resolution of their quarrel.

"The Amateur Photographer" EXPOSURE TABLE—October

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured, or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m., double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

| SUBJECT. | Ordinary. | Medium. | Rapid. | Extra Rapid. | Ultra Rapid. |
|---|-----------|-----------|-----------|--------------|--------------|
| Open seascapes and cloud studies | 1/25 sec. | 1/40 sec. | 1/75 sec. | 1/100 sec. | 1/120 sec. |
| Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes . . | 1/15 " | 1/25 " | 1/45 " | 1/60 " | 1/75 " |
| Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes | 1/6 " | 1/10 " | 1/20 " | 1/25 " | 1/30 " |
| Landscapes in fog or mist, or with strong foreground, well-lighted street scenes . . | 1/4 " | 1/6 " | 1/12 " | 1/15 " | 1/20 " |
| Buildings or trees occupying greater portion of pictures, river scenes with heavy foliage | 1/2 " | 1/3 " | 1/6 " | 1/8 " | 1/10 " |
| Portraits or groups taken out of doors, not too much shut in by buildings | 2 secs. | 1½ " | 1 " | 1/2 " | 1/3 " |
| Portraits in well-lighted room, light surroundings, big window, white reflector . . | 6 " | 5 secs. | 3 secs. | 2 secs. | 1½ " |

As a further guide we append a list of some of the best known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hyper-sensitive panchromatic plates and films require less exposure than the ultra-rapid.

Exhibition Prints on Chloro-Bromide Papers

Chloro-bromide papers are becoming increasingly popular amongst amateur photographers for the production of their exhibition prints, and the following notes will be useful to those who intend making use of this type of paper and to those who have been unsuccessful in obtaining satisfactory results.

THOSE who have not yet mastered printing on chloro-bromide paper will probably disagree with the statement that there is no other process which provides such good prints with equal facility. The mistake that many workers make is to imagine that prints on chloro-bromide paper are made in the same way as prints on ordinary bromide paper.

When dealing with bromide paper the depth of printing is controlled by increasing or decreasing the exposure time, and one need not consider development of the print in this connection. Development is timed in this case to secure adequate quality and contrast. When chloro-bromide paper is being used it is necessary to secure not only correct printing depth but also the proper degree of contrast.

Chloro-bromide prints are rarely developed to finality, and development is timed to secure a print of proper depth. An over-developed print will be too dark, while an under-developed print will be too light.

Factorial Development.

As it is difficult to judge printing depth accurately by the light of a safe dark-room lamp, some means of timing development accurately is necessary. The Watkins' factorial system provides us with this means, and prints developed to a suitable factor will be of a proper depth. An average factor for the chlorquinol developer is 5, while that for a chloro-bromide M.Q. developer is 3. These figures will be found correct for most subjects and from the purely technical point of view, but they may be modified to secure a lighter or darker print if desired.

Controlling Contrast.

The function of exposure time is to control, not depth of printing but the contrast of the print. An increase of exposure time over a minimum which will produce a print of good depth will result in a loss of contrast in a properly developed print, which may or may not be desirable, so that where a test print reveals too high a contrast the exposure should be increased; if the contrast is too soft exposure must be reduced.

Contrast may also be controlled by adjusting the strength of the developer; a strong developer produces a strong print, and a dilute developer a soft print. In practice full control is obtained by arriving at a balance of adjustment to both exposure time and developer strength.

Where long exposures are necessary for the reduction of contrast the time of

development would become too short to control if a solution of full strength were being used, so that it would then become necessary to dilute the developer in order to secure a comfortable time of working. This combination of adjustment to both developer strength and exposure time will produce the best results without the necessity of unduly prolonging either the exposure or the development times to which we should be liable if contrast were controlled by either means alone.

Test Exposures.

In actual printing it is first of all advisable to discover what length of exposure will be necessary to produce a print of sufficient depth regardless of contrast, and this is effected by the usual test-strip method as in bromide printing. If the negative is of fairly soft contrast it will be found that the contrast rendered by this minimum exposure is satisfactory, and this is the circumstance in which prints on chloro-bromide paper may be made in the same way as on bromide paper.

If it happens that the test print reveals that the contrast is excessive, a further test must be made in order to discover what increase in exposure over the minimum will be necessary to reduce the contrast to the required degree, but in this case one exposure only (not a series) must be made upon the test piece, and this should be made through such a portion of the negative as will indicate its range of contrast.

Thus, if the minimum exposure is found to be ten seconds, and that this exposure provides a print which is too hard, a test piece is exposed for 20 seconds and developed to a factor of 5 using chlorquinol, or 3 using M.Q. If this test print still shows an excess of contrast it would be advisable to dilute the developer by, say, 50 per cent, and to make a further test at the same exposure of 20 seconds; it is probable that a further increase in exposure time without dilution of the developer would result in development time becoming too short to control accurately.

Obtaining Printing Quality.

While it may be objected that this appears to be a cumbersome and lengthy process, it must be realised that it is the only way in which the advantage of control over printing quality and depth may be secured. The developed and fixed test piece will also indicate whether any modification of the factor is required, but it must be remembered if this seems desirable that any modification of the

factor will have its effect upon the contrast of the print, and a further test will be necessary.

When making the final print it must be borne in mind that the curtailed development that occurs in the case of these papers imposes upon us the necessity of taking great care that development commences evenly over the whole surface of the print and that it ends promptly. When large prints are being made it is advisable to give them an initial soaking in clean water until limp to facilitate the uniform application of the developer, and all prints should be given only a very brief rinse before fixing. An acid fixing bath should always be used for chloro-bromides.

Temperature.

Particularly when using an M.Q. developer strict attention must be paid to temperature, and while the higher temperatures of summer are not detrimental to good printing, some means must be employed during cold weather to maintain an even temperature of between 65 and 70 degrees. A "hot plate" can be made by using a biscuit tin or a box containing a hot-water bottle or an electric lamp, and the developing dish can be kept on the top of this very simple arrangement.

Colour.

It will be noticed that we have not considered the question of colour at all, and it is recommended that no attempt be made to secure any particular colour in the print. Chloro-bromide paper is noted for a distinctive warmth of colour and this is most easily obtained by following the procedure described. Extra warmth of colour is provided by a curtailment of development time which will have its effect upon the depth and contrast of the print. It is impossible to make two prints of the same contrast but of different colour from the same negative, as a little reasoning and experiment will soon show.

If warmth of colour is particularly desired it should be arranged for when the negative is made by prolonging its development until a degree of contrast is obtained which will make necessary the long exposure and short development of the chloro-bromide print.

It must, however, be pointed out that the best colour, a rich brown-black, is obtained from negatives that are just of sufficient vigour to require the use of a soft grade of bromide paper. The colour and quality of a chloro-bromide print made from such a negative of good quality is unexcelled by that of any other printing process.

C. M.

The Eyes in Portraiture

AND A NOTE ON LIGHTING

By W. H. BEST (Vancouver).

ONE of the oldest rules in portrait lighting has to do with the classical 45 degrees in which the rays of light should strike a sitter's face, i.e., the light is supposed to be not only 45 degrees above the sitter's face, but also 45 degrees at the side. This produces the best illumination for roundness and proper modelling.

Everyone can demonstrate this by practical experimentation. The rare exceptions to this rule are negligible.

Fig. 1.

If a light is correct for one side of the face, it is reasonable to assume that it should also apply as correctly for the other side. And then we come to the startling realisation that while we are scientific as regards one side of the face, we are treating the other half in striking antagonism to the above-mentioned precepts.

Keeping in mind that the best lighting is under the angle of 45 degrees, it will be realised that there is something drastically wrong when one uses a reflector in taking a portrait. A reflector is really the only useless item in the procedure of portrait work. A reflector will throw light into the sitter's face at the angle of 45 degrees when considered from the horizontal plane, but when it is looked at

Fig. 2.

from the vertical plane, the light comes from 0 degrees up to possibly 60 degrees, giving what is known as a flat lighting.

If you were to accentuate this lighting slightly you would at once see that the face appears to be disfigured; one half being properly lit, with the light coming from above, showing well-rounded cheeks and shadings, while the other half, with the light coming from the side, would

be without these gradations and shadings.

If this arrangement is used the directly-lit side of the face shows a small catch-light above the iris. The other side of the face, illuminated with reflected light, would show reflection in the outer part of the eye (see Fig. 1).

I have found that a small cardboard, which need not be larger than 8x10 in., covered with tinfoil, or a small

mirror put in the same relative position as the light on the other side of the face, gives much better results than the old-fashioned standard reflector. It is obvious that this small reflector must be on a slant downward to put the light where you want it. This would give you a rather hard light. If you wish to soften this reflection, crinkle your tinfoil first and put it on that way, or get the rough or matt tinfoil or silvered paper.

The beauty of such an appliance is that you can not only put it very close to the face and get all the illumination necessary, but it in itself is so small that it takes up very little space.

The resulting small catch-light in the other eye can be left in the eye, or can be easily etched out or spotted in the finished print. This it would always be advisable to do, as there would be two reflections in this eye, the main-light source and the reflector, while the other eye would only have

Fig. 3.

YOU CAN ALWAYS DO BETTER AT

The Leitz 'FOCOMAT' ENLARGER With Automatic Focusing.

Takes the standard 5-cm. focus Leica lens, screw-in fitting, automatic focusing adjustment, scaled from 2 diameters up to 10 diameters. Will take negatives 18x25 mm., 24x36 mm., 3x4 cm., and 4x4 cm. Metal masks can be supplied for any of these sizes. (Write for leaflet).

£13:19:0

Nine monthly payments of 32/7.

THE ZEISS IKON SUPER NETTEL
For 36 pictures 1 1/2 x 15/16 in. on standard cine film.

F/3.5 Zeiss Tessar anastigmat, metal self-capping focal-plane shutter, speeds 1/5th to 1/1000th sec. and built-in automatic focusing, self-erecting front, all-metal body. Very small and compact. £21:12:6
Nine monthly payments of 50/6.
Fitted f/2.8 Zeiss Tessar anastigmat. Nine monthly payments of 54/10. £23:10:0

THE ENSIGN MIDGET

A Real Vest-Pocket Edition.

Taking 6 pictures 3x4cm., costing only one penny each. All-distance lens, 3-speed shutter, 1/25th, 1/50th, 1/100th sec., T. and B. F/6.3 Ensign anastigmat. £30/- 50/-

THE GOLDI
Takes 16 Pictures on Standard V.P. Films.

F/2.9 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B., self-erecting front, optical direct finder, hinged back. Very compact. £7:7:0
Nine monthly payments of 17/2. (Write for leaflet.)

The 'Westminister' ENLARGING EASEL DE LUXE
(Registered Design)
New and Improved Model.
(Showing front open for receiving paper.)

Salient Features.—Absolute rigidity. Rising and falling front. Tilting and rotating movement (spring ball lock for centering), special spring pressure board ruled for all sizes up to 15x12, with special hinged glass front, supported by sliding strut, which leaves both hands free for placing paper in required position. Rapid in use. Accurate in register. Reduced price Carriage Paid Great Britain. (A) £3:15:0 charge of 5s. is made for packing-case, which is refunded in full upon return of case.)

one catch-light showing, the main light.

It is always a puzzle to me why so few professionals and amateurs pay attention to the reflections in the eye. You can often tell by looking at the eyes in a portrait what lighting was used and how it was placed. Why kill the eye with more than one light in it? One high-light gives roundness; more tend to flatness. To illustrate this I have made a print (Fig. 2) of two eyes, one has one catch-light and the other has two, and you can judge for yourself which is the more appealing.

The reflecting window does not allow you to look through it. The eye is termed "the window of the soul" and it is much more important to see what is within and behind the eye than the things before it.

Fig. 3 was taken with a main light and a small 60-watt globe in a 10-in. hood in place of the ordinary reflector. In this case you clearly see the roundness and the limpid depth of both eyes.

I would suggest to all those who are using the old-fashioned reflector to discard it and use it for a background.

The mistake made by the amateur portraitist—and many professionals also—is to use much too strong a light, probably with the idea of cutting down exposures. With the modern high-speed films and plates this becomes a secondary consideration. Better modelling can always be obtained with a lower light power.

You can make this experiment on a bright sunny day—put somebody in front of an open window, facing this window, and you will see that the nose and the ear (which is farther away from the window) will receive the same illumination. We have here a large powerful light-source that will penetrate a great distance before noticeable weakening takes place.

Now make this experiment. Take a 60-watt globe with a twelve-inch reflector or larger, and in a darkened room illuminate with it your subject's face. You will see at once that the

ear now receives much less light than the nose, which is the basis of roundness in portraits.

The portrait (Fig. 1) was made with an equivalent of a 1,000-watt lamp. I was obliged to use this light in order to get sufficient reflection to illustrate the previous point, but many photographers are using such intense lighting all the time and it tends to kill modelling.

Now look at Fig. 3. It was made with a 250-watt globe as the main-light source and a 60-watt globe instead of a reflector. You can see the floating quality in this light as it seems to flow caressing upon the face, diminishing rapidly. The hair is its true colour, and the high-lights are placed where they belong. With a small weak light source you get a wonderful gradation of the various light-and-shadow intensities, while with the intense light many of the half-shadows have entirely disappeared, leaving only the deep shadows, creating harshness.

TWO NOTES for users of ROLL-FILM CAMERAS

MAKING SINGLE EXPOSURES with a Roll-film Camera.

USERS of ordinary roll-film cameras, at times, wish that their instruments could be used for making a single exposure without the necessity of using up a whole roll of eight or more exposures before being able to make the urgently desired print.

I have at times, when using an ordinary folding roll-film camera, made single exposures, intended for immediate development, by purchasing a packet of cut films of that size which the camera would ordinarily give on roll film, and loading the camera, in the dark-room, of course, with a single film laid upon the pressure-plate of the opened camera, and closing the camera body on to its back, this to avoid the possibility of the film moving from its set position on the pressure plate. Needless to add, the pressure plate must be effective in its action, otherwise the film will not remain flat.

Fig. 1.

Having recently purchased a "Rolleicord" twin-lens reflex roll-film camera, I have found that it can also be used

for accommodating cut film for single exposures in the manner already explained. It might be a surprise to many users of this make of camera to learn that it will quite safely accommodate a single $3\frac{1}{2} \times 2\frac{1}{2}$ or $2\frac{1}{2} \times 2\frac{1}{2}$ glass plate.

Fig. 2.

The first illustration shows how the camera is loaded with the plate, which will lie very nicely in the recess of the pressure plate. In the second illustration it will be seen how the body of the camera is closed on to its back. By reason of the well-sprung pressure plate, all chances of straining the back of the camera when closed on to the plate are precluded. C. K.

PHOTOGRAPHING NEAR OBJECTS

with a Roll-film Camera.

PHOTOGRAPHERS possessing folding film cameras will often find that they can pull them out a considerable distance beyond the limits of the focussing scale, but will be unable to use this extra available extension because they do not know for what

distance the camera will then be focussed. The following simple method will enable them to calculate this.

If the focal length of the camera lens is F inches and the distance of the lens from the film is V inches, then $\frac{VF}{V-F}$ inches is the distance for which the camera is focussed.

For example, if the focal length of the lens is 4 inches, and the lens is 6 inches from the film, it is focussed for an object which is $\frac{6 \times 4}{6-4}$ inches—that is, 12 inches—away.

If, however, the focal length of the camera lens is given in centimetres, multiply the focal length by 2.54, which will convert it into inches.

But perhaps it is required to focus an object—which is a known distance away (call it d inches). Then the distance from lens to film will need to be $\frac{Fd}{d-F}$ inches.

Thus, if the object is 12 inches away, and the lens is of 4 inches focus, the distance from lens to film should be $\frac{4 \times 12}{12-4}$ inches—that is, 6 inches.

In practice, however, one difficulty will arise. An anastigmat or an R.R. lens has at least two elements, and the focal length is measured, not from either of the elements, but from a point somewhere between them.

However, this difficulty can be overcome quite easily. If the focal length of the camera lens is 4 inches, then, when the camera is focussed for infinity, the lens is at its focal length (4 inches) from the film.

So if, from your calculations, you need the lens 6 inches from the film, put the pointer 2 inches beyond the infinity mark, and all will be well. F. S.

TREE PHOTOGRAPHY

By G. R. ROOKLEDGE.

Sweet-Chestnut.

This leads us to notice that the same trees are different in different seasons, and it is in the winter that, for photographic purposes, the variations between species are most noticeable as a rule. We find, for instance, that in winter the beech and hornbeam show characteristic methods of branching not visible in summer owing to the foliage.

In the warm season the great majority of trees present masses rather than lines, while in winter the opposite is the case. In spring the buds, and in autumn the sparse leaves, cause the tree to display varying degrees of mass and line.

In the latter season the colouring of the foliage, etc., is probably at its brightest, though the spring can almost vie with it. The brilliant gold of the sweet-chestnut leaves, the bi-coloured leaves of the whitebeam, the brown of the oak foliage, the crimson of the rowan

Hoar-Frost. The first touch of winter.

MANY photographers seem to regard trees as nothing more than a very important adjunct to their landscapes, not realising that they are entitled to consideration as subjects in themselves.

Like human beings, trees have individuality; no two are alike. They differ in so many ways and have so many moods that they offer endless variety to anyone who cares to make a study of their characteristics with a camera—that is, to anyone who makes portraits of them.

Familiarity with the subject, however, is a primary essential for good portraiture, and can only be obtained by contact; but a few hints and suggestions may be useful.

Trees differ from species to species. This, of course, is obvious in some cases, but in others the differences are not marked, and the uninitiated may easily mistake one variety for another. No one is likely to confuse the holly and the spruce, but the hornbeam is frequently taken for beech in summer.

Fir.

and holly berries, and the copper bark of the Scots pine attract our attention in the autumn; while early in the year we notice the bright pale green of the new larch needles, the delicate green of the beech leaves and the emerald moss at the base of its trunk, as well as the snowy appearance of the white poplar when its buds expand.

The winter is not without its colouring. Golden leaves still cling to the sweet-chestnut saplings, making useful foils to their darker trunks; the holly, rowan and hawthorn berries show to their greatest advantage, and the ground under the trees, so dark in summer, is relieved by a carpet of dead leaves, often giving valuable contrasts in the flatter light of the dark season.

The silver birch, so frequently

An Autumn subject for the Outdoor Worker.

depicted in its summer clothing, yet reaches the height of its glory, at least to my mind, on one of those crisp winter mornings when the dark, deep-red mass of delicate tracery that is its head is crowned with an ethereal cloud of hoar-frost seen against a deep blue sky illuminated by a brilliant sun.

At that time of the year the low sun and the lack of foliage reveal the beauty of the bark of trees, varying from the smooth grey or startling ivory of the holly to the rough elm or oak bark, and the spirally twisted fluting of the sweet-chestnut's covering.

The late autumn, and, particularly, the winter are pre-eminently the times when the real character of a tree is literally laid bare.

In summer deciduous trees usually have the appearance of a more or less rounded mass, but in winter each branch and twig is seen. Compare, for instance, the semi-circular mass of a free-grown oak in summer with the bent, twisted, tortuous form of a similar tree when bare of leaves. Remembering its majestic symmetry in summer, note the massive ruggedness and clumsy branching displayed in the picture of a sweet-chestnut on the opposite page!

Beech.

Holly.

If these few points have interested you, why not add to them by personal acquaintance? Expensive apparatus is definitely not needed for this class of work. An $f/8$ lens is quite good; if you can get one of long or variable focus, that is excellent. A tripod and an exposure meter you are accustomed to are essential, while panchromatic stock and a pale filter are useful. With these materials you must be on your guard against movement due to the wind, for exposures will be long; but no great difficulty need be anticipated, and it may be of interest to know that the illustrations in this article were all taken with a lens working at $f/8$ and the materials mentioned. If the worker possesses an expensive or more elaborate outfit the work is just as simple, but care must be taken to avoid over-exposure, which will tend to flatten out all contrast. Even a cheap boxform or roll-film camera will produce good results with this subject. In any case endeavour to take advantage of bright side lighting, especially when the sun is low, to emphasise form and modelling.

So now that autumn is with us again, do not put the camera away until the spring, but get out and make friends with a few trees. They are worth it! Their interest is great, and grows with acquaintance.

With the Beginners

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

UNDER-EXPOSURE.

A GOOD many photographers find difficulty in recognising under-exposure in a negative, and in deciding whether it is under-exposure or under-development that has caused a negative to be too weak. As a rule there should be no difficulty at all in deciding.

Let us start right at the beginning. If we take a plate straight out of its box, and treat it with any suitable developer, nothing will happen, provided no actinic light falls on the plate, and that the developer will not produce chemical fog. The fixed plate will look like a piece of clear glass.

Next, suppose we put the plate some yards away from an electric lamp which is switched on and off as rapidly as possible. In the developer the plate will darken evenly all over, but not beyond a certain depth, however long we continue development. The fixed plate will be a pale grey.

We can now imagine that we give a plate rather more light, and develop it as far as it will go, and, after fixing, find the plate a dark grey all over. And, finally, we can use more light still, and secure a fixed plate that is black all over. We have four plates, clear, light grey, dark grey and black, the differences resulting from the amount of light action.

When we expose a plate in the camera, different parts of it are affected according to the amount of light falling on them from different parts of the subject. From a very

dark part of the subject there may come so little light that this part is represented by clear glass on the negative (as with our first plate). From a very bright part of the subject comes so much light that it is represented on the negative by a black patch (as with our fourth plate). And between these two extremes will come all shades of grey that are needed to represent the gradations of the subject itself.

The next thing to bear in mind is that when we speak of the exposure a plate has received we should mean the amount of effective light action, resulting in different degrees of density after development. It is not correct to consider only the time a shutter opened, or a cap was off. It would be possible to get as much light action on a plate in one-hundredth of a second in some cases as in an hour in others.

For the illustration the actual exposure time was the same for the whole of the stereoscopic plate, which was developed and printed as a single negative. The purpose of the illustration has resulted in neither half being good, but one is manifestly worse than the other. The difference is due entirely to the fact that one lens was set at $f/8$ and the other at $f/22$.

To get a better rendering of the subject I should have proceeded differently. As the subject was of extreme contrast—part in deep shadow in a conservatory, and part in bright sunshine out of doors—I should have given a

October 3rd, 1934

longer exposure and curtailed development. Incidentally, I should have used a different plate and a filter. I should have given longer exposure to obtain sufficient light action from the shadow areas; and I should have curtailed development to prevent over-density in the brilliant parts.

I did none of these things, because I wished to keep to the usual conditions under which several exposures on different subjects are made on one spool of film, which is afterwards developed as a whole for normal time. Most of us are familiar with the appearance of a spool made in these circumstances, with some sections dense and contrasty, and others thin and weak, and lacking in detail.

In the illustration, the left-hand portion is definitely under-exposed. If it had been developed longer it would have been better up to a certain point. The denser parts would have become denser still, and faint detail would have appeared where there is none at present. But, as I say, the improvement would continue only up to a point. Further development might have made some of the dense patches darker still, which would be a disadvantage; but it would have produced no further detail in the clear parts, just where such detail is wanted.

This is the definite indication of under-exposure—lack of detail, gradation and density in the less brightly lighted parts of the subject. There is nothing that can be done to remedy the defect. Nothing we can do in the way of development, after-treatment, or "tinkering" with the

negative, can be a substitute for appropriate light action. Those who suggest intensification as a remedy do not appreciate this. Intensification will proportionately increase the various densities resulting from development, but it cannot increase a density that is not there at all. Therefore, serious under-exposure is fatal to a satisfactory result.

When a negative suffers from under-development the case is altogether different. If adequate exposure was given, the negative will show more detail in the darker parts of the subject, but the density of this detail is much too low. High-lights which should approximate to black in the negative are only dark grey; what should be dark greys are light greys. In fact, all the densities need strengthening proportionately, and this is exactly what longer development would have done.

This is a case in which suitable intensification comes to the rescue. It does just what longer development would have done.

After this simple explanation I think that even a beginner should be able to examine his negatives, and judge from their appearance which have not received sufficient light action during exposure; and which were adequately exposed, but not developed long enough to build up the necessary strength and contrast. The first class he must regard as unsatisfactory, and beyond real remedy; the second class he may confidently expect to improve by the simple process of building up the image by intensification.

W. L. F. W.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

THE MINIATURE CAMERA.

SIR,—As a convert from a $3\frac{1}{2} \times 2\frac{1}{2}$ plate camera enthusiast to a miniature camera enthusiast, I should like to explain the main reasons for the change in my enthusiasm, as I think they help to show why the miniature camera has become so deservedly popular.

The miniature camera has enlarged my field of photography immensely and has undoubtedly resulted in a great improvement in the general standard of my work, together with a very much higher standard of technique. This improvement in the standard of my work—admittedly not a very high standard—has, I think, been due to the fact that I can now afford to take several slightly different photographs of a promising subject, and by making the most of it in this way I can obtain a really satisfactory picture with more certainty.

In conclusion I should like to say that the pleasure of getting a really first-class negative, both technically and pictorially, on a miniature film, that is capable of standing a high degree of enlargement, is a joy that only a real miniature camera enthusiast can appreciate, and is, I think, the main reason why so many people who have become miniature camera owners have also become very much keener photographers than hitherto.—Yours, etc., G. A. MACLEAN.

DEVELOPING TANKS.

SIR,—I shall look with great interest for replies to Mr. Longfield's letter in a recent issue referring to a type of tank that seemed likely to be proof against the particular difficulty that I experience with the apron type.

That difficulty is that for no apparent reason the film adheres sometimes to the apron. In some cases this prevents the developer from getting access to the emulsion; in others I have known considerable patches of the emulsion to come right away from the film and stick to the apron.

The makers suggest that this is due to the film being wound too tightly round the apron and its spool. But I have been unable to find any certain cure. Can your readers suggest one?—Yours, etc., J. A. STIRLING.

SIR,—I was interested in the letter of L. Longfield *re* developing tanks. Several years ago I bought one known as the Eastman Developing Box, and have used it ever since. It consists of a long metal box with a roller one end and at the other a roller and winder with a length of string attached to the roller. At the end of the string is a clip that takes the spool of film. The string and clip are passed over the other and brought back to the winder. The spool of film is then clipped in and the extra backing paper threaded under the winder and over the edge of the box. After pouring in the developer the lid is clamped on, thereby holding the end of the film by the backing paper quite firmly. You then wind up the string unwinding the film. The box is fitted with a rocker, but the only snag in it is that if you rely on the rocker the developer does not properly reach that part of the film which goes over the roller. However, common sense easily rectifies that.

My trouble is that it is only made for a six-exposure film, and at a dealer's shop where I made enquiries regarding it nobody seemed to have heard of it.

It is absolutely a daylight tank, simple and satisfactory in every way. I have often wondered why I have never seen another like it.—Yours, etc., L. M. DOUGLAS.

LONG-DISTANCE PHOTOGRAPHY.

SIR,—With reference to the article dealing with the above subject which appeared in a recent issue of "The A.P.," it may be of interest to record that at least twenty-five years ago Jules Richard supplied a special baseboard for use with the 45×107 Verascope, upon which a pair of field glasses could be so adjusted to the lenses of the camera as to enable highly satisfactory views of distant objects to be photographed.

I myself obtained some fine pictures of the Savoy Alps from hotel grounds situated many miles from the mountains in question.—Yours, etc., DOUGLAS TIMINS.

UNSPPOOLING ROLL FILMS.

SIR,—*Re* your article on unspooling roll films, I think I know a more simple way—get two strong "bulldog" clips, clip up the start of the film, hold the clip in your teeth, unroll the film, clip up the end after tearing off paper. It is then ready to be run through a basin of water to take out the curl before see-sawing. I change the clips before fixing and put on another pair to avoid stains.—Yours, etc., HELEN C. KINGSTON.

How I make my EXHIBITION PICTURES

No.
CCXLIX

Mr. F. L.
HELBROUGH.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

“TO explain how I make my exhibition pictures is more difficult to me than making them. Anyhow, to begin at the beginning, I started dabbling in photography with a box Brownie when I was quite a lad. After many heart-breaking results I visited a local chemist who did developing and printing, and asked his advice. He looked me up and down as a rare specimen of impudence, but invited me into his dark-room, and, as he expressed it, taught me all there was to know about photography. This operation lasted about

fifteen minutes. One condition of so instructing me was that in future I was to purchase all my photographic requisites from him. I did.

“After a short time I was able to make quite presentable prints; in fact they were considered so good that my mother gave me permission to use the coal-cellar as a dark-room. I was evidently getting on. Then a friend took me to a photographic exhibition. What I saw there had two distinct effects on me. The first was that I realised that I was by no means so good a photographer as I had imagined;

the second was that I was fired with an ambition to produce prints as good as those I had seen on the walls.

“A combination of the two effects led me to join a camera club—a step which I have never regretted.

“Now about my methods. I do not specialise in any particular class of subject, but am attracted by sunshine and shadow effects, landscape appealing to me most strongly. I practically always use Kodak film, the Panatomic developed with M.Q. being my special favourite. I always endeavour to obtain a thin negative, but with plenty of ‘life’ in it. For printing I use Kodak Royal, tinted or white, which I develop for fully two minutes to get proper detail and gradation. For some subjects I rely on chlorobromide as more suitable to what I am aiming at. I seldom make contact prints, but select my best negatives, and proceed straight away to make enlargements from them.

“Faking I cannot tolerate, but I find it advisable to brighten up the quality of the print with a little medium. I also naturally exercise a certain amount of control during the exposure; and my home-made lantern, using only reflected light, makes the exposures sufficiently long to give ample time for such modifications.

“When exposing for my negatives I always try, if time permits, to wait for the right lighting. In the case of ‘The Shadow Carpet,’ taken at Canterbury, I waited nearly two hours to get the shadow in the middle of the steps.”

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

ALTHOUGH much of the uncertainty that used to exist in the early days of photography has now passed away—thanks to time and temperature tables, negative emulsions of constant qualities, and an enormous range of printing materials—the problem of exposure remains just as it was. There are meters, of course, and all sorts of more or less automatic calculators, but, whatever the type, a certain amount of judgment is called for in their application.

Men and Meters.

In all probability, no two individuals would get precisely the same reading from a meter of the Watkins or Wynne type. One will take a reading in the nearest shadow which is included in the subject. Another will cause the meter to face the scene he is exposing upon, and a third individual will expose the instrument in the shade of his body to the sky.

Further differences may arise in matching the tints, in allowances for the class of subject, and in variations in shutter speeds. Differences, of an analogous sort, arise with either calculators or instruments of the extincor class, and, even with those based on the most modern photo-electric cell arrangements, there are possibilities of not inconsiderable variation resulting from differences in the method of use.

Nevertheless, none of these differences amounts to much, in practical work, if the method with each individual is always the same, and if subject allowances, based on experience and on the known reaction of the negative material, are made.

It is in these respects that judgment has always had to be and still must be exercised. The maxim that dates back to the earliest days of photography—expose for the shadows and let the lights take care of themselves—is as sound as ever, and should always be kept in mind.

The Determining Factor.

The shadows—the darkest parts of the subject—are the determining factor, and due allowance has to be made according to their depth and proximity, i.e., by increasing the

exposure correspondingly in the case of light-measuring instruments and calculators, and by directing the meter towards the darkest part of the subject in the case of appliances of the extincor and photo-electric cell types.

A case in point is provided by No. 1 of the prints on the opposite page—"The Last Load," by L. Horton. Here, it seems as though the allowance, if any, for the proximity of the dark above the archway is inadequate. Moreover, the wagon and horses behind are only shown in silhouette, and do not display the differences in tonal value that would undoubtedly be seen in the subject itself.

It is not possible to say definitely, in the absence of the negative, that under-exposure is present, for a like result in the print can arise through the contrasts of the negative being too great for the capacity of the printing paper; but, at all events, the print in question does provide an idea of the effect that follows under-exposure. Its existence can be confirmed by a lack of deposit in the shadow portions of the negative, and, if these be clear, its maker will now be in a position to diagnose the fault.

Light against Dark.

From the pictorial point of view, the subject has not been badly seen, but the group, as the centre of interest, does not quite exert the degree of attraction it should.

It is a strong dark, and, shown against a light background, would be sufficient to retain the attention, but, in conjunction with a setting of equivalent tone, its presence is barely discernible. The placing of light against dark or dark against light not only makes for a very considerable concentration of interest, but is the only really effective way in which a group of this kind can be made to stand out properly from its surroundings.

Admittedly little could be done to improve matters in this instance, for the setting is unamenable, and no practical re-arrangement suggests itself. Even if the exposure had been deferred for a bit, the horse and wagon would still be shown against the hedge, and the probability is that their scale, on account of movement towards the

camera, would be much too large for the picture space. All that could have been done, apart from the question of exposure, seems to have been done.

Negative Contrast.

The landscape portion of No. 6, "Spring," by T. Hart, scarcely seems to show the degree of modulation that should be there, and it would not be surprising to find that here again there was a measure of under-exposure.

If so, the negative would be very thin, and, if a further attempt is made on the same or a similar subject, the precaution to take will be obvious. On the other hand, a rendering like that of No. 4, "Bicester," by N. Appleyard, with its heavy shadows and too brilliant lights, would seem to be attributable to a too-vigorous negative—one that is over-developed—rather than to under-exposure.

As the negative is now complete, the most effective remedy for its harshness of tone is the substitution of a softer type of printing paper for that employed in the present instance, remarks which are also applicable, though perhaps in lesser degree, to Nos. 3 and 5, "Reflections," by D. W. Morrell and "Shabbington," by Albert S. A. Wooster.

Exposure and Development.

The latter, apart from its slight technical deficiency, shows an excellent rendering of an effect of evening sunshine, though, unless something of an undesirable character made an appearance, a horizontal picture would be more appropriate for the subject than the present vertical.

A little more on the right than on the left would be advisable, too, for the bigger of the two sunlit gables should not be placed so near the edge of the print. With No. 2, "Milking Time," by Miss S. Lambe, it is a very difficult thing to get a satisfactory grouping with cows when they are on the move, and, having regard to this, the result can be regarded as very creditable. Technically, the print shows excellent workmanship, for its tones are good and harmonious, and there is no evidence of either under-exposure or miscalculation in the time of development.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE RIVER BED," by Alex. Keighley.

THIS example from the hands of one of the veterans of photography, Alex. Keighley, shows that he has lost none of his vision or skill, for not only does it convey that suggestion of romance that we have come to expect from him, but it is also characterised by a nice feeling for an effect of sunshine; its composition is clever and intriguing; and the contrast of dark tone with light is striking and most arresting.

The Grand Manner.

Keighley is one of those men who always seem to work in the grand manner. His pictures nearly always seem to convey, besides his sense of the romantic, a feeling for spaciousness and the truly picturesque, and this is no exception.

The original, which is one of those on view at the current exhibition of the London Salon of Photography at 5a, Pall Mall East, London, S.W.1, is of large size—approximately 20×15 in.—and a carbon of great richness of quality. It should be seen to be fully appreciated, for although the reproduction gives a good idea of the subject and its intrinsic attraction, it cannot quite attain the quality innate in the original. What is more or less unique, and no less out of the ordinary, is the manner in which a departure from the conventional placing for the principal item has been managed without involving any suspicion of weakness or inviting a charge of eccentricity.

The departure from the normal in question is to be seen in the placing of the group of figures at (1). There is no doubt but that this group forms the centre of attraction, for the way in which they draw and hold the attention is self-evident. Yet, in the ordinary run of things, such a placing, so low down in the picture space and so near the right-hand edge, would inevitably cause a feeling of weakness to arise.

Artistic Licence.

Much may be permitted under the liberty afforded under the charter of artistic licence, but it has to justify itself, and, here, the justification is to be found in the position of the opposing accents, of which the patches of sunlight at (2) and (3) are the chief. That at (2) pulls against the attraction

In conjunction these two accents give rise to the feeling that the group at (1) is quite forcefully placed, although without them it is doubtful if the position, alone, would be strong enough. But, apart from placing, it will be observed that the two figures of the group form the brightest notes of the whole theme. This, in the

absence of any other factor, would tend to centre the interest in them, but the attention so excited is greatly emphasised by the fact that they are shown against the deepest shadow.

The secondary figure (4) has an influence similar to accent (3), which stresses its effect, and another factor of no little significance arises from the position of the group (1) on the diagonal from top left to bottom right.

So that it now appears that justification for the unusual placing of the chief item is to be found.

Appeal of Effect.

The arrangement, as described, is interesting, but it must be remembered that composition is only the means whereby the pictorial motive is made manifest. Here the pictorial appeal lies in the beauty of the effect of sunshine, and in its transforming influence upon what, in other circumstances, would be but an ordinary scene of little except topographical interest.

It is wonderfully well conveyed, despite a slight degree of indecision that, perhaps, may be attributable to a high magnification of a small portion of the negative. It only amounts to a suspicion of a softening of line, and does not affect the appeal of the work as a whole, which is of an extraordinarily high order, for, over and above the æsthetic attraction of its effect, there is an absorbing literary content arising from the romantic associations suggested by the ancient character of the dresses and the nature of the setting.

"MENTOR."

exerted by the point (1) in a direction that is both upward and inclined to the left. That at (3), the lower, also pulls against (1), but more directly towards the left-hand side.

The effect of (2) is to create an illusion that (1) is higher in the picture space than it is in fact, and (3) causes a similar hallucination in conveying the idea that (1) is in closer proximity to the centre than it actually is.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINE APPARATUS.

October Idyll By R. H. ALDER.

THE charm of cinematography is its ability to convey atmosphere. The dramatist, prisoned in the three walls of the stage, must use cunning tricks of dialogue to indicate the seasons which the cameraman, by a few allusive shots, shows as part and parcel of his story.

Autumnal settings are ideal for certain types of films, whether frankly fictional or descriptive. Having said that, let us admit that autumn is the most difficult season to put across!

Autumn's Shapes.

October is a riot of gay hues and therefore disheartening to those whose work is, at present, limited to monochrome. Miracles of panchromatism cannot translate into black-and-white that thrill of early reds against late greens. The light, too, is failing; the sun casts longer shadows.

A few brief days, however, at the end of each autumn, give the means of conveying its inwardness in shape and not in colour. When the sycamore is bare the beech is still clothed in russet, and the contrast between the few withered leaves of the one and the full foliage of the other tells its own story.

Not only that, but the holes in nature's roof enable us to make the most of the remnants of summer sunshine which pierce the mists.

Dynamic Types.

These form the static background of dynamic movement characteristic of the month. Fallen leaves whirled in the sudden, impetuous equinoctial winds are good cinema; for a gentler reminder there is the curling grey smoke rising from the hamlet's re-kindled fires—and burning rubbish! The farmer turns in the stubble for the winter frosts, while the smith roughs the horses' shoes.

For those who yearn for more difficult symbols there is the stream in muddy spate, or the shy squirrel husbanding a store of nuts against the famine.

The town-dweller, too, has his opportunities. Warm early dusk and gleaming lights on wet roadways, the almost

deserted parks, the closing "summer resorts"—all these provide action material.

Home Comfort.

And, lest this should seem too sad, let us dig out the photofloods and fade out on the first twinkling fireside and tea—and muffins, harbingers of lazy, cosy winter. In autumn we realise anew the joys of that indefinable English happiness—Home.

Of course, superspeed pan. stock is essential; filters and a large-aperture lens are desirable, but not absolutely necessary if we recognise the limitations. Armed with knowledge one may set forth with brave heart.

Be wary, however, about the filters. To seize the cloud formations a deep yellow is needed, to hold the red and green landscape a light tint is useful,

but the morning mists require, if anything, a *blue* filter or no filter at all. With yellow they vanish.

Special Technique.

One of my most cherished possessions is a piece of light blue cellophane (no, not for use as a filter itself!) which came from a Christmas cracker. Used in conjunction with a yellow filter it gives to the eye almost exactly the monochrome rendering that is seen by panchromatic film through the filter alone. For autumn shooting some such aid to vision is well worth seeking.

An exposure meter is essential—the change from summer to autumn is very deceptive. The lighting has become flatter, though weaker, and the piles of cumulus sometimes fill the shadows with unexpected light.

The opening of the hunting season will provide the amateur cinematographer with endless action subjects that can be rendered both pictorially and dramatically if wanted for incidents in a picture story.

Constructive Cutting for Ciné Amateurs

By M. A. LOVELL-BURGESS.

SKILFUL cutting is to films what analogy is to the spoken or written word; it opens up windows in the mind.

The purpose of analogy in literature is to show an agreement or likeness in certain aspects between things which are otherwise entirely different. Here is an example applied to films.

In a British film, featuring Stewart Rome, between scenes of crowds hastening to the polling booths on election day, shots were inserted of bewildered sheep hastening down a steep bank with many an anxious "Baa."

The audience saw the joke and a wave of laughter swept over the house.

Many who know the value of good cutting say little about it, because they have too often seen what happens when enthusiastic amateurs get busy inserting side views of telegraph poles, speeding up the action by introducing a host of unusual angles, and obtaining dizzy movement by linking up entirely disconnected static shots in quick

and unrelated succession. This is montage gone mad.

It is important for the amateur to understand cutting, because cutting is only another word for construction. And without a knowledge of film construction the amateur can make a straight, photographic record of a play, but he will never achieve any of the possibilities inherent in the film.

And what possibilities there are! Most arts depend for their ultimate efficacy on the response engendered by experience, association and imagination in the mind of the student.

Words, for instance, are meaningless to the reader unless they conjure up in his mind certain preconceived experiences. It is on the pre-supposition of these experiences and feelings that the writer relies.

Filmic art, although psychological, is objective rather than subjective. The film producer has to present certain scenes in order to tell his story. He cannot write "sea" and be content to awaken in minds a

number of impressions born of experiences. He must show the sea. And the whole visual value, and its emotional content, will depend on what aspect of the sea—wild, calm, connection, separating—he ultimately selects for presentation. And this is where editing, or cutting, with all its constructive possibilities, can banish the stage convention for ever. Brilliant technical virtuosity has no entertainment value apart from human values. But link the two together, as when in Anthony Asquith's "Tell England" a shot of moving train wheels terminates the sequence where Fay Compton, keeping a smiling face before acquaintances, hears, but does not see, her son's noisy departure for the front.

Skilful cutting is more possible for the amateur to-day than for the professional because sound has defeated the cutters. It is not easy to prune dialogue. Amateurs can have it all their own way where cutting is concerned.

Juvenile Slides, Lanterns and Ciné Projectors

MESSRS. ENSIGN, LTD. are to be congratulated on their continued efforts to provide entertainment for the youngsters during the forthcoming winter evenings. Already the adventures of Mickey Mouse have been presented by this firm in the form of miniature and standard lantern slides and as short reels for 16-mm. projectors. This

year they have extended the programme to include the Walt Disney story of the "Three Little Pigs," and the firm has issued a most attractively produced catalogue and price list with a coloured cover, giving full particulars of all these attractions and "Safe-Toy" cinemas. A copy of the list will be sent free on application to Ensign, Ltd.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, October 3rd.

CLOSING DATE

Wednesday, October 31
1934

ANNUAL Lantern-Slide Competition 1934

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in "The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in "The A.P." prize set which circulates throughout the British Isles, can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that

the awards are made to individual slides and not to sets; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of "A.P." Prize Slides should hasten to do so and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Wednesday, October 31st.

Classes and Subjects.

CLASS I.—Landscape with or without figures, sea subjects and river scenery.

CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.

CLASS III.—Architecture, interior and exterior.

CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

CLASS V.—Natural history subjects.

CLASS VI.—Lantern slides in colour (not hand-coloured).

CLASS VII.—Champion class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{2} \times 3\frac{1}{2}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of

the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Wednesday, October 31st. The slides must be well packed and addressed, "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

All amateur photographers are reminded that Summer Time ends on October 7th.

The Annual Dinner of the Royal Photographic Society will be held this year at the Monico Restaurant, Piccadilly Circus, W.1, on Tuesday, October 9th, at 7.15 p.m. Mr. R. H. Lawton is again in charge of the arrangements, and tickets may be obtained from him, price 10s. 6d. His address is 311, Thorold Road, Ilford. Tickets may also be obtained from the Secretary, R.P.S., 35, Russell Square, W.C.1.

At the Camera Club an exhibition of photographs of outstanding merit and interest was opened by Lord Dunsany on September 25th. They are by Pamela Booth, and every reader of "The A.P." who has the opportunity should endeavour to see them. The exhibition is open on each weekday from 11 a.m. to 7 p.m. until October 16th. Admission is free.

The annual sale of the Camera Co. commenced on 1st October, at 320, Vauxhall Bridge Road, Victoria, S.W.1. There are many bargains at very low prices indeed, and readers who may find it convenient to examine the stock will find a visit well worth while.

Readers of "The A.P." who are in the Civil Service and are employed in provincial offices, or in London departments in which there is no federated society, should note that they may join the Civil Service Portfolios as from the present month (and thus receive the last quarterly portfolio for 1934) on payment of the 1935 subscription of 3s. This subscription now entitles members to receive the C.S. Federation quarterly journal free of charge. The portfolio membership is now well over 100, and is representative of all branches and grades of the service. Details may be obtained by forwarding a stamped addressed foolscap envelope (stating department in which serving) to Mr. F. M. Chapman, S.E.3, Ministry of Labour, Whitehall, S.W.1.

The Bradford Photographic Society is one of the oldest in the country, and has just started its new session. This society is, with the Manchester Society, joint organiser of the Northern Exhibition, and its members are well known for their successes in exhibitions all over the country. Alex. Keighley has been a member for over fifty years, and each of his lectures has been given at Bradford first. An attractive fixture list has been prepared, and the society offers exceptional facilities for practical work at its club-rooms. New apparatus for portrait work has just been installed. All readers of "The A.P." residing in

the neighbourhood should join this society. Beginners are particularly welcomed. Application to the Hon. Secretary, Mr. W. Whitehead, 8, Bull-royd Drive, Bradford, will bring full particulars.

A new ciné society is being formed in Beckenham, and will be known as the Foxgrove Amateur Film Club. The winter season begins this week. Readers who are interested should write to the Secretary, Mr. C. Hurrie, at 7, Foxgrove Road, Beckenham.

With the title "Taking and Making Pictures in Winter," Messrs. Ensign have just issued a most attractively illustrated little booklet dealing with every phase of indoor photography for the amateur, picture-making by flashbulbs and other forms of artificial lighting; enlarging and enlargers; print-making and albums; lantern slides and lanterns, and all accessories for home entertainment are listed. Every reader should send for a copy; he is bound to find many items of interest. It will be sent free on application to Ensign, Ltd., 88 and 89, High Holborn, W.C.1.

A Memorial Fund for the late George E. Brown has been started as a tangible expression of regret from the whole photographic industry. The professional photographers, dealers, manufacturers and members of the R.P.S. are supporting the fund, and we hope that all readers of "The A.P." may be able to indicate their appreciation also. Any contribution which it is considered the appeal merits should be sent to Mr. J. Hill, at 104, High Holborn, London, W.C.1. Cheques should be drawn in favour of George E. Brown Memorial Fund, and crossed Westminster Bank.

An attractive handbook well written and fully illustrated has been issued by the Coronet Camera Co. for beginners and others in photography. It is entitled "Better Photographs," and the author is Marcel Natkin. We understand that a Continental edition of this book has already had a very large sale. It is full of useful hints, and the examples are well chosen. The price is 2s. 6d., and it is obtainable from the Coronet Camera Co., 311, Summer Lane, Birmingham.

Two more handbooks for miniature camera workers, dealing respectively with Colour Photography and Portraiture, have been issued by the Fomo Publishing Co., of Ohio. The sole distributors for these books in this country are Sands Hunter and Co., of 37, Bedford Street, Strand, W.C.2, and they form a most useful series of practical guides. In particular, the new book on colour photography for the miniature camera can be commended as it covers the whole

ground, with one striking omission—no reference is made or instructions given for the Dufay Colour Process; but with this exception it is complete and reliable. They cost 2s. 6d. each.

The Perseverance Postal Camera Club has a vacancy in the membership. Any advanced worker wishing to join should communicate promptly with the Secretary, Mr. G. F. Ryman, whose address is now 20, Ashcroft Road, Cirencester.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, October 31. Rules in the issue of September 26.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1–10; (Osaka), October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbu, Tokyo.

London Salon of Photography.—Open, September 8–October 6. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8–October 6. Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 20–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Open, October 17–20. Secretary, E. George Alderman, Ruardean, Newton Street, Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26–December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 19; open, December 10–15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography. Antwerp, 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotográfica de Madrid, Calle del Principe, 16, Madrid, Spain.

Preston Scientific Society Open Photographic Exhibition.—Entries, January 11; open, January 28–February 16. Exhibition Secretary, F. Wells, 65, Powis Road, Ashton-on-Ribble, Preston, Lancs.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester.

City of London and Cripplegate P.S. Annual Exhibition.—Closing date, February 11; open, March 11–16. Exhibition Secretary, J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, October 6. Particulars from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Fixed Focus.

I am commencing photography with a fixed-focus camera. At what distances should the subjects be? A. R. (London.)

When a lens is set at infinity the nearest point at which an object will be in focus depends on the focal length of the lens, and as we do not happen to know what is the focal length of yours we cannot answer your question. The information would almost certainly be given in the book of instructions which should accompany the camera. Failing that, the makers would be able to give you the information. We may add that the distance is also affected by the stop used, the smaller the stop the nearer being the point at which an object will be sharply rendered.

Noisy Shutter.

My focal-plane shutter makes a noise like an iron gate slamming. Is there any way I can quiet it down? L. C. (Chiswick.)

We know of no formula for dealing with a shutter that makes a noise like an iron gate. Many focal-plane shutters are by no means silent, but as a rule this is of no practical importance. We can only suggest that you might put your question to the makers of the shutter itself.

Bromide Solution.

How much solution would 1 oz. of potassium bromide make? How many drops should I use to every ounce of developer for gaslight prints? G. A. F. (Kensington.)

We should advise you to dissolve the ounce of bromide in about 8 oz. of water and make it up to 9 oz. 1 dram. You could then take it that 10 minims of this solution would contain one grain of bromide. How much you should add to a developer would depend upon the formula; but, however many grains were mentioned, you could easily secure that number by taking ten times as many minims of the solution.

Copying.

Would you recommend a suitable film and paper for copying black-and-white engineering drawings? N. W. D. (Burton-on-Trent.)

To get good black-and-white results you must use a process plate or film, so as to get sufficient density and contrast. For the same reason the best paper to employ would be a vigorous gaslight or bromide.

Making Filter.

Can you tell me how to make green and yellow filters? A. F. D. (Sidmouth.)

The question of making colour filters is not one that can be dealt with briefly. You must consult a good reference book such as the "Dictionary of Photography" (obtainable from our publishers, price 8s., post free), where the matter occupies six pages of close print.

Dense Negative.

I gave the enclosed — film the same development as I give to — film, but it is very dense. Is it over-exposed or over-developed? C. C. H. (Preston.)

The film you send is seriously over-developed. It does not follow that a development time for one film is at all suitable for a different film; and it is probable that in the circumstances half the development time given would have been ample.

Hectograph Jelly.

Can you give me the formula for the adhesive for holding bromide paper on the enlarging easel? E. G. P. (Farnborough.)

A good stationer could probably supply you with the Hectograph material ready made. It can be prepared as follows: Soak 4 oz. of gelatine in 8 oz. water for 48 hours, stirring at intervals. Then add this to 14 oz. of glycerine at 200 degrees Fahr., stirring gently until a smooth mixture free from air-bells is obtained.

Bleaching Prints.

In bleaching prints for chromium intensification the shadows do not bleach out. What is the cause? Should this method be worked by artificial light or daylight? R. R. (Berne.)

We cannot offer any explanation as to why the shadows on your prints do not bleach out, assuming the solution to be all right. They are, naturally, the last parts of the image to change, but their bleaching should only be a question of sufficient time. It is better to carry out the whole process of intensification by redevelopment in diffused daylight.

Fogged Negatives.

What is the cause of the bars of light on the enclosed negatives? I give particulars of camera, subject, exposures and stops. G. W. B. (St. Albans.)

None of the particulars you give has any bearing whatever on the trouble with your negatives, which is due to the fact that you are using a highly sensitive panchromatic film in a camera the red window of which is not safe. Light passes through this window and is reflected from part of the interior of the camera on to the film as it is wound. The only remedy is a light-trap round the window inside.

Tinting Photographs.

In tinting photographs I find difficulty in laying on an even tint over a large area. I used glossy prints which have been hardened. Is there any way of overcoming this trouble? A. M. (Manchester.)

We regret that we cannot tell you of any reliable way out of your difficulty. In our experience it is practically impossible to lay on a large, even tint on a glossy paper, especially if it is hardened, unless it is done by means of an air brush. A solution of oxgall is recommended, but even this is by no means an infallible remedy.

Bewi Meter.

Where can I get instructions for using a Bewi Junior exposure meter? G. W. C. (Stockport.)

The agents for the Bewi exposure meters are Messrs. Ensign, Ltd., 88-89, High Holborn, London, W.C.1, who will no doubt be able to supply you with the information.

Competitions.

Where can I obtain a complete list of current photographic competitions? R. Q. (Stockton.)

We publish in our weekly list all the competitions of which we get information, and are not aware of a more complete list anywhere.

Coating Paper.

I have recently used a prepared solution to make P.O.P., and now wish to make my own bromide paper; could you give me a formula? I. W. F. (Fulham.)

It is quite out of the question for you to attempt to coat paper with a bromide emulsion; it is a highly skilled and technical job, and very different from sensitising paper to get a daylight print.

Thermometer Scales.

What is the rule for converting Centigrade degrees into Fahrenheit? E. M. (London.)

Multiply the degrees Centigrade by 9, divide by 5, and add 32.

The AMATEUR'S EMPORIUM

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less.....1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less.....2/6
 2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post **FRIDAY** for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 560, Deansgate, Manchester, 3; 26n, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1." and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

LEICA II, as brand new, leather case, numerous extras; perfect in every detail, Elmar f/3.5, £17.—Clavering, 35/37, Charing Cross Rd., W.C.2. (WHI 1638). [3809]

NAGEL Roll Film, 3½×2½, f/4.5, £2/10; Horizontal Electric Condenser Enlarger, 4-pl., with f/4.5 lens, £2; Kodak Film Tank, 3½×2½, 10/-; pair of 6½-in. Condensers, mounted, 12/-.—29, Kinnaird Avenue, W.4. [3903]

ERMANOX 3½×2½, with f/1.8 Ernstar lens, 1/20th to 1/1,400th, 6 double slides, F.P.A., lens cap, sky-shade, leather case; all new condition; cost £64; what offer?—Collins, Excelda Works, Rookery Rd., Handsworth, Birmingham. [3902]

LEICA Model II, chromium plated, with Summar (rigid) lens, and carrying-case, only 3 months old; exceptional bargain, £20.—Gianelli, 11, Cosway St., N.W.1. [3907]

3½×2½ T.-P. de Luxe Reflex, f/4.5 Taylor-Hobson Cooke lens, 3 dark slides, F.P.A., filter and carrying-case; also 11-in. f/5.6 Dallmeyer Telephoto to fit above, in leather case; price complete, £15.—132, Heythorpe St., Southfields, S.W.18. [3914]

NO. 1 Auto. Kodak, f/6.3, Kodex shutter, case, portrait attachment; good condition, 35/- or offers.—J. Wilson, 6, Orwell Place, Edinburgh. [3916]

SUPER Ikonta, 16 on 3½×2½, f/3.5 Tessar, coupled distance meter, leather case, £12/10.—Below. [3918]

3-IN. Cooke f/3.5 Lens, sunk mount, ideal for miniature enlarger, £2/10.—Box 1690, c/o "The Amateur Photographer." [3918]

ZODEL 3½×2½, f/4.8, as new, double extension, 3 slides, 40/-.—Brougham, 48, Limesdale Gardens, Edgware. [3923]

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

1-PLATE Thornton-Pickard Reflex, T.-P. Cooke f/4.5, F.P.A., 6 double book-form slides, leather case, £7 or reasonable offer; deposit system.—Harris, 87, High St., Watford, Herts. [3920]

1-PLATE Camera, Dallmeyer square bellows, 2 back rack, all movements, T.-P. shutter, lens, 3 D.D. slides, saddle leather case, £2/5; ¾-in. Condenser, 25/-; Wide-angle Lens, Taylor-Hobson, 20/-.—L. S., 89, Upper Stanhope St., Liverpool. [3925]

TAKEN for Debt.—9×12 cm. and 4-pl. Goerz F.P. Tenax, rack focus, rise, cross, level and finder, 6-in. Dogmar f/4.5, Compur, 3 leather slides, leather case; good condition, £3/10, or offer.—103, Queensmill Rd., Fulham, S.W.6. [3926]

CAMERAS AND LENSES

CAPE TOWN.—Nagel 70/1 3½×2½ Roll Film, f/4.5, latest Compur shutter, 1 to 1/250th sec., leather case, portrait attachment; all as new, £8, offers.—Cashel, Firdale Avenue. [3927]

REFLEX 3-pl. Ensign Popular, f/2.9 Pentac, revolving back, 1/15th to 1/1,000th, 3 slides, F.P.A., 120 size roll-film holder, Dallmeyer filter, leather case, carrying straps, etc.; condition very good, everything perfect; ideal outfit of its type, £15/15; deposit system with pleasure.—Box 1717, c/o "The Amateur Photographer." [3928]

VOIGTLANDER Brilliant, f/6.3 anastigmat, special leather case; perfect condition; cost 97/6; accept 55/-.—Box 1721, c/o "The Amateur Photographer." [3932]

1-PLATE Graflex Series B, Zeiss Tessar f/4.5, 15-cm., F.P.A. and roll-film holder; approval deposit, £9/10.—McKnight, Calgarth, Trafalgar Rd., Wigan. [3936]

1-PLATE T.-P. Junior Reflex (1934), Ross Xpres 4 f/4.5, 6 slides, roll-holder, leather case, £12, or exchange for 4½×6 cm. reflex, f/3 or larger.—Styles, Handicraft Centre, Newbury Park, Ilford, Essex. [3939]

ICA Reflex, takes 9×9 cm. plates, 3½×2½ film packs, Zeiss Tessar f/4.5, case, £6/10; Newman-Sinclair 4-pl. Reflex, unique instrument, f/4.5 Zeiss Tessar, front shutter, F.P.A., case, £6/10; both excellent condition, seen London or Surrey.—BM/HFLA, London, W.C.1. [3943]

4.5×6 cm. Exakta, f/2.8 Tessar, ever-ready case, Optochrom filter, lens hood, Correx film tank and thermometer; indistinguishable from new, £15/10.—Radford, Vacye, Malvern. [3948]

CAMERAS AND LENSES

10×15 cm. Curt Bentzin Folding Reflex, self-capping, 3 double slides, F.P.A., P.C. adapter, 6 slides, no lens, bargain, £4; 12×10 Conical Field, double extension, 3 slides, tripod, £2; 12×12 Dry Mounter, gas, £3; Seven 1-pl. Mackenzie-Wishart Envelopes, 5/-; Mahogany Screw Press, 14½×9, 5/-; Ensignette Developing Tank, new, 5/-—Winsor, 103, Vernon Rd., Copnor, Portsmouth. [3942]

KOLIBRI, new condition, Tessar f/3.5, in Compur, lens hood, Alpha and Beta filters, £6/10; Leitz Distance Meter, as new, to 300-ft., 15/-; T.P. Reflex, 3½×2½, Ross Xpres f/4.5, 12 slides, roll-holder, lens hood and filters, focussing magnifiers, good condition, £6/10, or offers.—Alston, Elderbank, Bridport. [3945]

CAMEO 1-pl., Aldis Uno f/7.7, Lukos III, 5 slides, case, 30/-; perfect condition.—129, Spring Grove Crescent, Lampton, Hounslow. [3946]

LEICA Model I, Elmar f/3.5, 3 spool-chambers and range-finder, in leather case, perfect condition, very little used, £8; also Zeiss Prismatic Binoculars, 8×, pattern Delburism, centre-screw and one eyepiece focussing, £7; approval deposit.—Box 1732, c/o "The Amateur Photographer." [3950]

ENGLISH Auto Range, Aldis f/4.5, Compur D.A.; absolutely new, unused; unwanted present, £7/7.—Box 1733, c/o "The Amateur Photographer." [3951]

AGFA 4×6½ cm., f/3.9 Solinar, Compur (to 1/300th), case; entirely unused, £4/12/6.—Wilkinson, 13, Cedar Court, Torquay. [3954]

3½×2½ Roll Film, Houghton Carbine Watch 34 Pocket f/7.7 Aldis anastigmat, 1/25th to 1/100th, leather case; new condition, perfect, 35/-—Newstead, 3, Filkin's Lane, Chester. [3955]

PRESSMAN 1-pl. Reflex, Aldis f/4.5, 3 double book-form mahogany slides, leather case, one owner, cost £25, sell at £8; Aptus Type Ferrottype Outfit, with plates and mounts, takes 2 sizes, brand new, £3; Salex Pocket Focal-plane, 3½×2½, 9 single metal slides, new, £3/10.—Hudson, 36, Cambridge St., Bridlington. [3957]

REFLEX, Ensign Special, Aldis f/4.5, 3½×2½, R.F.A., case; new condition, £6/10.—Swinney, 58, Bodney Rd., Hackney Downs, E.8. [3959]

WHOLE-PLATE Camera, 3 D.D. slides, R.R. lens; good condition, 35/-—Below.

1-PLATE Camera, 1 D.D. slide, R.R. lens, tripod; 2 splendid condition, 35/-—Below.

SIX Kodak P.C. D.D. Slides, for cut films, 15/- lot; Aldis Uno 7½-in. f/7.7 anastigmat, 3-speed shutter, as new, 20/-—114, Boundary Rd., Walthamstow, E.17. [3965]

ZEISS Ikon Super Ikonta, 16 on 3½×2½, Tessar f/3.5, Compur, coupled range-finder, Proxar, 2 filters; absolutely brand new, £12/15.—Below.

NAGEL Vollenda, 16 on V.P., f/4.5, D.A. shutter, zip leather case; used once only, £2/15.—34, Elwell Way, Beckenham. Telephone, Beckenham 1627. [3966]

3½×2½ Cameo, Aldis f/4.5, 1 to 1/100th sec., 32 double extension, rise, cross, wire-finder, supplementary Telephoto lens, lens hood, slides, F.P.A. and leather case, £4/10.—Below.

THREE-SECTION Tripod, 3/-; 3½×2½ Kodak F. Film Pack Tank, 4/6; Set Verax Filters, 4/-; Diaphot, 2/-—Thomlinson, 1, Grosvenor Gardens, Carlisle. [3967]

3½×2½ No. 6 Ensign Carbine Roll Film, Aldis 34 Uno f/4.5, Mulchro shutter, leather case; perfect, £3/19/6.—Walter, 1, Farnborough Rd., Southport. [3968]

CONTAX, f/2.8 Tessar, complete with filter and lens hood in leather case, in new and perfect condition; only used a few times; cost nearly £30; accept £20.—Allen, Jeweller, Aldeburgh, Suffolk. [3970]

6×4.5 cm. T.P. Bijou Reflex, Cooke f/2.5, 3 D.D. slides, F.P.A., case; just been overhauled by makers; new condition, £9; will consider Stereo Camera in part exchange; also wanted small Folding Camera.—Brierley, 20, Hanton Lane, Halifax, Yorks. [3973]

REFLEX, T.P. Junior 3½×2½, T.P. Cooke f/4.5, 5-in., 6 slides excellent condition, canvas case, fair condition, £7/10; 5½-in. Petzval f/4 Portrait Lens, in panel for above, 10/-; Condenser, 5½-in. mounted, 12/6; Watkins Tank, 1-pl., German silver, 8/6.—Chalke, Up Over, South Drive, Cheam, Surrey. [3978]

NEWMAN & GUARDIA Special Folding Reflex, 3½×2½, Dallmeyer Pentac f/2.9, F.P.A.; perfect condition, as new; cost £56; accept £35, bargain.—Box 1738, c/o "The Amateur Photographer." [3982]

Proprietors of Stephens' Inks.

Send for particulars of the "Gripfix" method of Dry Mounting—hot or cold process.

HAND *Third Edition*
CAMERAS

By R. Child Bayley

AN outstanding feature of this book, which makes a special appeal to all amateur photographers, is a number of separately printed plates, all from hand camera negatives by the author. These are selected to show the very wide range of subjects accessible to the snapshotter, from pure landscape to tele-photographic portraiture.

Though primarily written for the beginner, "Hand Cameras" contains much of interest to the advanced worker, and should be in the working library of all who would attain to the highest degree of artistic excellence in their work.

THIRD
EDITION

MOTION PICTURES

with the Baby Ciné

A Handbook on 9.5-mm.
Cinematography

By
HAROLD B. ABBOTT

This handbook, specially written for
amateur cinematographers, includes
every aspect of the fascinating hobby
of making motion pictures.

In the preparation of this third edition
a thorough revision has been carried
out. Much additional information has
been included, and all important new
apparatus has been brought under
review.

The following Table of Contents
indicates the wide range of the book
and the completeness with which the
subject is covered.

SUPER IKONTA

THE CAMERA THAT DOES THE FOCUSING

Vast strides have been made in the technical construction of roll-film cameras during the past few years, and those competent to judge of modern roll-film camera achievement will give first place to the Zeiss Ikon Super Ikonta. The one great drawback always urged against roll-film cameras by the serious amateur photographer—that one had to depend upon estimation of distance for one's focussing—has been removed. It can be said with truth that the coupled-with-lens distance meter employed in the Super Ikonta is so precise that it reaches a higher standard of accuracy than even reflex or ground-glass screen focussing. Defective eyesight prevents many people from focussing correctly upon a ground-glass screen, and further, the coarseness of grain of most ground glass does not help accurate focussing. When one looks through the Super Ikonta distance meter one observes two distinct images. By superimposing these two images the subject is focussed with an accuracy impossible by any other means—the above reproduction is an example.

All good camera stores stock the Super Ikonta.

SUPER IKONTA PRICES

Optical equipment, Zeiss Tessar in Compur shutter (delayed-action release, except with No. 530).

| Code No. | Picture Size | Lens | Focus | Prices |
|----------|----------------------------|--------------------|--------|--------------|

ZEISS IKON LTD., 11, MORTIMER HOUSE, MORTIMER STREET, LONDON, W.1

New inexpensive KODAK EQUIPMENT FOR INDOOR PHOTOGRAPHY *at Night*

KODAK'S FAST panchromatic films, highly sensitive to artificial light, allow big reductions in exposure times. Handy, low-priced lighting aids provide brilliant, easily-controlled illumination in any room—valuable new equipment for the home portraitist and still-life worker.

KODAK SUPER SENSITIVE PANCHROMATIC FILM (Roll Film and Film Packs). Three times as fast as regular Kodak Regular Film in artificial light. Used with "Photoflood" illumination it gives well-exposed negatives with quite brief exposures.

"PANATOMIC" FILM (Roll Film and Film Packs). Not quite so fast in artificial light as Kodak "Super-Sensitive Panchromatic," but still very much faster to artificial light than regular Kodak Film. Fine-grain panchromatic emulsion ensures pictures of finest quality.

NEW "PHOTOFLOOD" LAMP fits into any electric light socket and gives intense continuous light. Little more than half the cost of earlier type yet $1\frac{1}{2}$ times as brilliant. Safety fuse incorporated. In all standard voltages **4/-** each

"KODAFLECTOR" JUNIOR. A reflector to hold one "Photoflood"; increases efficiency of illumination $2\frac{1}{2}$ times. Supplied with ingeniously designed wire stand that can be stood on table, hung from picture rail, over back of chair, etc., in any one of a dozen useful positions. With 9 ft. of flex, but without "Photoflood" Lamp **6/-**

"SASHALITE" BULB. The clean-working, powderless, successor to flashlight. Flash takes place within sealed glass bulb—no smoke, no dust, no smell. Each bulb gives one brilliant flash **10½d.** each
Complete "Sashalite" Outfit, containing battery in holder, metal-faced, collapsible card reflector and 2 "Sashalite" Bulbs . . . **7/6**

THE NEW "PHOTOFLOOD" LAMP.

THE "KODAFLECTOR" JUNIOR.

THE "SASHALITE" OUTFIT.

$\frac{1}{2}$ -V.P. — $\frac{1}{2}$ - $2\frac{1}{2}$ - $3\frac{1}{2}$ -

$2\frac{1}{2}$ - $2\frac{1}{2}$ - Leica etc.

£4-10-0

Taken with an
Ensign Midget

ENSIGN, LIMITED, HIGH HOLBORN, LONDON, W.C.1

In shipyards and coalmines, City offices and shops, man is at work. Typists and clerks, riveters and engineers, industries light and heavy provide absorbing subjects for a new photographic contest. A picture of a scene in bank, shop, office or school, or one of a housewife at the washtub, will be eligible as that of a cobbler at his last, or factory hand tending great machines.

One guinea will be paid for each photograph published. There are five special awards of £10 each for photographs symbolizing industry—smoking chimneys, blast furnaces, pitheads.

Two guineas will be paid for each special study published.

First Prize £100

Second Prize .. £50

Third Prize .. £25

A Declaration form which must accompany each picture will be found every day only in the

i-pl. Water, f/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/200th sec., T. and B., complete with F.P.A. **£6 17 6**

i-pl. N. & G. Trellis, f/6.3 Zeiss Protar anastigmat, Compur shutter, speeds 1 to 1/150th sec., T. and B., triple extension, complete with 10 single slides and leather case. **£15 10 0**

i-pl. Adora, tropical model, f/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/200th sec., T. and B., double extension, complete with 3 single slides, F.P. adapter and leather case. **£8 10 0**

9x12 cm. Zeiss Ikon Donato, f/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/200th sec., T. and B., double extension, complete with 3 single slides and F.P. adapter. **£7 15 0**

i-pl. Voigtlander Avus, f/4.5 Skopar anastigmat, delayed-action Compur shutter, speeds 1 to 1/200th sec., T. and B., double extension, complete with 3 single slides, F.P. adapter and leather case. **£9 17 6**

9x12 cm. or i-pl. Zeiss Ikon Maximar, f/4.5 Zeiss Tessar anastigmat, delayed-action Compur shutter, speeds 1 to 1/300th sec., T. and B., complete with 3 single slides, F.P. adapter and leather case. **£10 17 6**

2 1/2 x 2 1/2 Voigtlander Brilliant, f/6.3 Voigtlander anastigmat, speeded shutter, 1/25th, 1/50th, 1/100th sec., T. and B. As new **£3 5 0**

2 1/2 x 2 1/2 Voigtlander Brilliant, f/7.7 Voigtlander anastigmat, speeded shutter, 1/25th, 1/50th sec. and Bulb. As new. **£1 17 6**

4x6 cm. Zeiss Ikon Deckkroll, f/2.7 Zeiss Tessar anastigmat, self-capping focal-plane shutter, speeds 1/7th to 1/1,000th sec., T. & B., complete with F.P.A. **£11 17 6**

3x2 1/2 T-P. Horizontal Reflex, f/4.5 Dallmeyer anastigmat, self-capping focal-plane shutter, speeds 1/10th to 1/1,000th sec. and Time, complete with 3 single slides, F.P. adapter and canvas case. **£6 15 0**

3x2 1/2 Ensign Speed Roll Film Reflex, f/4.5 Adia Uno anastigmat, self-capping focal-plane shutter, speeds 1/25th to 1/500th sec. and Time. **£5 17 6**

2 1/2 x 2 1/2 Rolleicord, f/4.5 Zeiss Triotar anastigmat, Compur shutter, speeds 1 to 1/250th sec., T. and B. As new. **£8 17 6**

3x2 1/2 T-P. Junior Special Reflex, f/4.5 T-P. Cooke anastigmat, self-capping focal-plane shutter, speeds 1/10th to 1/1,000th sec. and Time, complete with 3 single slides and roll-holder. **£8 15 0**

9x12 cm. Zeiss Ikon Miroflex, f/4.5 Zeiss Tessar anastigmat, self-capping focal-plane shutter, speeds 1/3rd to 1/1,200th sec., T. and B., complete with 3 single slides, F.P.A. and leather case **£22 10 0**

i-pl. Soho Reflex, f/4.5 Ross Xpres anastigmat, focal-plane shutter, speeds 1/16th, 1/50th and Time, complete with 2 double plate-holders and leather case. **£11 17 6**

B. & H. Filmo Projector, 16-mm., 2-in. Projection lens, motor drive, forward and reverse, 400-watt lamp, complete in case **£37 10 0**

Model K Cine-Kodak, 16-mm., f/1.9 Kodak anastigmat, interchangeable lens mount, complete in leather case. **£26 10 0**

Kodak Auto-Focus Enlarger, for negatives up to 6x4, complete with metal plate weights. As new. **£7 5 0**

Sashille Hand Battery Lamp, complete with 11-in. reflector. **19s. 6d.**

i-pl. Zeiss Ikon Miraphot Enlarger, f/4.5 Zeiss Tessar anastigmat. **£7 15 0**

3x2 1/2 V.N. Semi-Automatic Enlarger, f/4.5 Dallmeyer anastigmat. Shop-sold only. **£6 15 0**

Pathoscope Home Projector, 9.5-mm., double claw, complete with flex. **£4 10 0**

Kodascope Model C, 2-in. Projection lens, motor drive, complete in metal carrying-case. **£8 17 6**

Appointed an Associate of the Institute

The "WELTA PERFECTA"

A TWIN-LENS FOLDING REFLEX.

£13:10:0

Nine monthly payments of 31/8.

Fitted f/3.5 Meyer Trioplan anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B., f/3.5 Trioplan focussing lens, lever focussing, metal focussing hood, fitted with magnifying lens for sharp definition. Takes 12 pictures on standard $3\frac{1}{2} \times 2\frac{1}{2}$ roll film. (Write for leaflet.)

THE ZEISS IKON SUPER NETTEL

For 36 pictures $1\frac{1}{2} \times 1\frac{1}{2}$ in. on standard cine film.

F/3.5 Zeiss Tessar anastigmat, metal self-capping focal-plane shutter, speeds 1/5th to 1/1,000th sec. and Bulb, automatic focussing, self-erecting front, all-metal body. Very small and compact. **£21:12:6**

Nine monthly payments of 50/6.

Fitted f/2.8 Zeiss Tessar anastigmat. **£23:10:0**

THE AGFA Compur Speedex

Takes Standard $3\frac{1}{2} \times 2\frac{1}{2}$ Roll Films.

F/4.5 Agfa anastigmat, delayed-action Compur shutter, speeds 1 to 1/250th sec., T. and B., brilliant reversible optical rectifiers, self-erecting front, all-metal body, hinged back, special type safety window device for panchromatic films. Only. **£6:6:0**

Nine monthly payments of 14/7.

The EXAKT ENLARGER

Fitted f/4.5 Steinheil Casar anastigmat, complete with condenser and orange filter. Very simple adjustment to obtain size of enlargement required.

Model IA for 2.5-10 times linear enlargements from 4x4 cm. negatives. **£13:10:0**

Nine monthly payments of 31/6.

Model II for 2 to 7.8 times linear enlargements from 6x6 cm. negatives and sections of i-plate. **£18:0:0**

Nine monthly payments of 42/-.

Model III for 1.7 to 6.3 times linear enlargements from negatives up to $3\frac{1}{2} \times 2\frac{1}{2}$ and sections of i-plate. **£19:10:0**

Nine monthly payments of 45/6. (Write for leaflet.)

VOL. LXXVIII. No. 2396.

IN a recent beginners' article the desirability of joining a photographic society was emphasised. It was mentioned at the same time that we were always prepared to give information, when required, as to the most accessible societies in any given spot. The immediate result was a small avalanche of letters from all quarters asking for such information, which was promptly given. The inevitable conclusion is that many societies cannot be taking effective steps to make their existence known to photographers in their areas. We are aware that, on the other hand, there are some societies which neglect no opportunity for publicity, and these naturally have the largest and most active membership. We may add that the most complete list of photographic societies, including postal clubs, with information brought right up to date, is to be found in each yearly volume of *Photograms of the Year*.

Filtered Out.

How grateful one feels, studying one's own photographs and those of others, that what has been brought away from the scene of action has been only that which was pleasing or quaint to the eye, and that which was disagreeable to the nose or to the ear has been eliminated. That is one great service which the camera performs. Those who look at photographs sometimes realise that certain of them have entailed risk or patience, but they seldom realise that many more have involved an experience which, while not dangerous, was unpleasant. The photograph of the charming canal in the Dutch city gives no hint of its effluvium; the fine seascape can be viewed without encountering the stinging spray and the buffeting

TOPICS of the Week

wind against which the photographer had to stand. Recently our wanderings took us through the city of Salisbury on market day. The sheep market was full of possible pictures, but the pictures themselves, when taken, will show nothing of the shouting and pushing and scrambling which accompany a sheep auction, not to speak of the pitiful bleating which never dies away. Those who just look at photographs ought to be grateful for the sight of something which is much more pleasant, looked at in that way, than it ever is in reality.

Ordered Off.

How modest our public men are growing. Every day the newspapers chronicle the ordering off of some photographer who has invaded the precincts of the great. Now it is Mr. Winston Churchill, painting at a Mediterranean villa, who, spying a camera-man in the grounds, pursues him with uplifted paint-brushes out of the gates, even as our first parents were driven from Eden with the two-edged sword. Here we have a clear case in which the tool of the painter has proved itself the better weapon. On the very same day Signor Mussolini was at his army manoeuvres. A photographer "in the twinkling of an eye" has focussed his lens on the Duce at an awkward moment, and the twinkling of an eye is followed in this instance by the sound of the last trump, and the photographer, when he regains consciousness, finds himself hopelessly out of focus. Modesty grows apace. Very soon, if this goes on, we shall have forgotten what our public men are like, and then perhaps we shall fail to esteem them. Or, perhaps, esteem them all the more.

A LONDON SNAPSHOT.

Striking groups of figures and masses of masonry and steel can be seen and photographed at the present time on Waterloo Bridge. It is a unique subject that should not be missed. An article dealing with it appears on another page.

Taken Unawares.

"I will not be photographed while I am eating," says Signor Mussolini, and we cannot blame him. Few men—and fewer women—look well when engaged in the process of mastication. The lifting of the glass may be a charming pose, but the lifting of the fork never. Even though table manners are now more refined than in the days of Henry VIII, à la Charles Laughton, most men might be more gracefully pictured than when conveying morsels of food to their mouths. A new terror at public banquets—or at least not very new, for its origin is said to go back for a dozen years—is the little flash camera with which a merciless journalist picks out a principal guest, approaches him stealthily, and takes a picture. The victim is often not aware of anything unusual, except a momentary sparkle in the air, which he may put down to a peculiar iridescence in the champagne, but in the papers next day his image appears, and he realises the penalty of having some reputation. A man who was in

charge of this apparatus at a recent banquet entertained the Press table throughout the evening with an account of his exploits. He appeared to think them meritorious.

Immunity.

Photographers whose work is sometimes the sport of temperature changes will gasp with envy of the workers in the newly constructed research laboratories of the Massachusetts Institute of Technology. The entire spectroscopic laboratory and several of the research rooms are totally enclosed in thick layers of cork for heat insulation, and the insulation is said to be so perfect that the most violent changes of temperature outside will not affect the temperature inside the rooms by more than one degree in about three months. Here is immunity indeed! Let the sun broil as it will, or the icy blasts of winter do their worst. Special temperature controls and air-conditioning arrangements are provided, and the same care is taken to minimise

vibrations arising within the building or transmitted from outside. This must be a researcher's paradise. The funds for the laboratories were provided by the late Mr. George Eastman, of Kodak fame, who, unfortunately, has not lived to see their completion.

And this is Painting.

That popular play which ran for so long at St. James's, entitled, "The Late Christopher Bean," turns upon the values of pictures, and lets the audience into some sordid secrets, among others the fact that there have been more Corots produced since Corot's death than there were before. We learnt from the play that the despised works of a young artist who died ten years previously suddenly become of enormous value, and these works do actually appear on the stage. But, unfortunately, only the back of the frame is shown to the audience, or the canvases are rolled up like carpets; apparently the blaze of the pictures themselves would be too much for the stalls.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

The Compur Shutter.

In working a Compur shutter would setting it between two marks give an intermediate speed? Is any damage done by altering the speed after the shutter is set? E. H. G. (Cardiff.)

The above question was dealt with in the "Replies" page of the issue of September 19th, and the reply we gave called forth several letters from readers who were in doubt as to whether they were using their Compur shutters properly or otherwise.

We regret that part of the reply was not strictly correct, as we suggested that the shutter should not be set for speeds intermediate to those marked on the dial. This is true for many shutters of similar type, but only partly true in the case of modern Compur shutters.

On this point the instructions issued with the shutter state: "The speeds range continuously from 1 to 1/100th sec., and may be set to any intermediate value. Any such intermediate speed as 1/75th between 1/50th and 1/100th sec. is thus obtainable. It cannot be set to any definite value between 1/100th and the maximum speed of the shutter, neither may this be done between B and 1 second."

It is thus evident that intermediate speeds *can* be obtained over part of the range, where the shutter is working on the same gear wheel. Even then, however, the exact value of such speeds must be doubtful within certain limits, and as the total difference between 1/50th and 1/100th is only 1/100th of a second, it is doubtful whether there can be any practical advantage in attempting to split it.

The other part of the answer given was to the effect that it is possible to alter the speed dial after the shutter has been set, and it was this that caused anxiety to certain readers, who had instructions issued with some Kodak cameras. These

stated: "See that the shutter is set to the correct speed before moving the tension lever. If the ring is moved after the tension lever is already set, especially between 1/100th and 1/250th of a second, the shutter is liable to be damaged."

On this point the maker's instructions support our own view, being as follows: "In the ordinary way it does not matter whether you set the speed or the tension first. It is better, however, when using the highest speed to set the ring before the shutter is tensioned, as setting the ring to this speed after the shutter has been tensioned is rather difficult."

It will be observed that it is definitely stated that there is no objection to altering the speed ring after the shutter is set for speeds up to 1/100th sec.; and that even for the higher speeds this is only "rather difficult," and not absolutely dangerous.

We hold, therefore, that, except in the detail first mentioned, the information we gave was correct. One reader who wrote on the matter stated that we were wrong on every point from beginning to end; all the others cheerfully acknowledged the almost infallible accuracy of the information we offer our readers. Needless to say, we do not claim absolute infallibility, but we do our best to answer in a reliable and helpful manner the many thousands of questions that reach us.

There is one other point about the Compur shutter that did not arise in the original question, but to which we take this opportunity of drawing attention. On the speed dial is a curved arrow indicating the direction in which the wheel should be turned to alter the speeds, and the suggestion thus made should be observed. We may further add that, in our own opinion, this shutter, properly used, is one of the most accurate and reliable in existence. That is certainly our own experience.

The Chromium Intensifier

WITH the range of modern printing papers the photographer has less need of intensifiers than formerly, but there are occasions when it is necessary to add to the density of a negative in order to meet the needs of a particular paper which the photographer wishes to use.

The intensifier which was worked out by the late C. Welborne Piper, and known as the chromium intensifier, is one of the best for amateur work. It has the advantage of being safe, with ordinary care, its action is under control, and may be repeated if the first application is insufficient. Further, there is no scheduled poison in the formula.

The purpose of an intensifier, it may be well to point out, is to add to the density of a negative. It will not bring into evidence shadow details which have not been formed by light action, and there are no magic properties as some photographers seem to believe.

If for any reason a negative has been under-developed the use of this intensifier will put matters right.

First Essentials.

The first essential is a properly fixed and well-washed negative. The practice recommended of leaving plates and films in the fixing bath for at least half as long again as the time taken for the visible and unexposed silver emulsion to disappear will be a guarantee that intensification may be proceeded with.

If an imperfectly fixed negative is intensified brown stains will appear that are practically impossible to remove. In cases of doubt as to the effectiveness of fixation, as is the case with negatives developed at the D. & P. establishments during a rush period, it is a good plan to refix the negatives for ten minutes in a clean acid fixing bath, as a preliminary. This must be followed by a thorough washing. Most of the failures with this intensifier are due to neglect of these essentials.

The intensifier may be bought ready prepared, or the photographer may use the following formula :

A.
Potassium bichromate 1 oz.
Water 20 oz.

B.
Hydrochloric acid .. 1 oz.
Water 10 oz.

The bleaching bath is made by taking 1 oz. of A and 1 oz. of B, and adding 6 oz. of water.

This will give a definite increase of density throughout all tones of the image. The increase of density can, however, be regulated by the proportions of the bleacher. For instance, if the solution is made up with 1 oz. of A, $\frac{1}{2}$ oz. of B and 6 oz. of water the intensification of the image will be much greater.

If the proportions are 1 oz. of A, 2 oz. of B, and 6 oz. of water, the intensifying action will be much less.

Bleaching.

In the case of a dry negative a preliminary soaking in water for ten minutes is advisable. This ensures even action. The operation should be carried out in subdued light, as the bichromate is slightly sensitive to light.

The bleacher should be poured over the negative and the dish gently rocked. The image will speedily bleach to a buff tint, but the operation should be carried on for about two minutes. The negative must then be thoroughly washed until it is quite free from the yellow bichromate stain. This will take from ten to thirty minutes, and the negative must be protected from strong light the while. Too much light action at this stage may make it difficult to obtain full density on redevelopment.

If it is necessary to shorten the time of washing the yellow stain can be almost instantly removed by immersing the negative in a solution of potassium metabisulphite. A short washing should follow, and redevelopment may be commenced.

The latter operation should be carried out in daylight. Any non-staining developer may be used, but amidol is best for the purpose. Care should be taken to develop to a sufficient degree, that is, to allow the operation to go on for at least five minutes. We have known this process condemned by photographers who have failed to realise that the image darkens over almost immediately the developer is applied, but the full effect is gradually obtained.

If it is thought that further density is necessary the process may be repeated, after a short washing to remove the developer from the film. For a second intensification, amidol is specially recommended.

If further intensification is required fresh bleaching solution should be used.

Printing Quality.

This method of intensification should result in an image of slightly warm black colour of greatly increased printing value. The deeply stained yellow-brown negatives that are sometimes seen as the result of this process are caused by ineffective washing between bleaching and redevelopment.

While these stains do not affect the printing quality of the negative if they are even, the latter condition is not always the case, and the bath of potassium metabisulphite is an effective preventative, and its use is advocated.

Intensifying Prints.

It is not generally known that the chromium intensifier can be used for improving weak bromide prints or those of bad colour. The procedure is the same as for negatives, but the formula should be A, 1 oz. ; B, 2 oz. ; water 6 oz.

Amidol should be used for the redevelopment. The method can be applied to any bromide print, provided it is not already too dark, for the purpose of obtaining very fine black tones.

Shadows in the Foreground

Showing how otherwise uninteresting subjects can be assisted by foreground shadows.

By PETER W. HILL.

IT is surprising how many photographers will mar an otherwise beautiful subject by lack of attention to the foreground. One is asked to admire a photograph; the subject is very pleasing—a row of ancient thatched cottages—the technique is perfect, but the picture is not restful, for the eye keeps roving from the cottages over an expanse of plain, uninteresting foreground, not knowing where to rest, and continually distracted from the beauty of the main subject by this monotonous stretch of space in the composition.

There are many ways of providing an interesting foreground when figures are unavailable or out of keeping with the subject, e.g., making footprints in snow, throwing a stone into water to make ripples, choosing a viewpoint giving a shrub, a bit of railing or shadows in the foreground.

These few notes and accompanying photographs are intended to show what good use may be made of shadows

as a means of breaking up the foreground. Shadows afford a simple method of adding interest to a picture, for their use is dependent only upon a judicious choice of suitable viewpoint, and the right time of day.

This choice of

A shadow thrown by a gate gives interest to the foreground of this picture.

The tranquillity of this scene is assisted by the long shadows across the foreground.

The patch of shadow in the left bottom corner is here used to balance the heavier part of the picture on the right-hand side.

viewpoint is the most important consideration when photographing a subject with much foreground, for it is rarely that some part of the expanse will not have some object which, even if undesirable itself as an addition to the picture, will cast a shadow, and so break up the monotony and make an interesting base to support the main theme in the picture.

Suitable shadows may be thrown across the foreground only at certain times of the day, according to the position of the sun. One must decide, therefore, if the subject is worth the trouble, and may conveniently be visited on various occasions, upon the time when the shadows will be of most advantage to the picture.

Shadows may serve a variety of purposes. They may be used as lines leading up to, and thus stressing the main item of the picture. Horizontal ones will emphasize the tranquillity of a scene. A carefully chosen mass

of shadow may give support to an item in the picture in order to prevent any "top-heavy" effect. In every case their selection should serve as a means of improving the composition, which may probably turn a commonplace record into a beautiful picture.

When heavy shadows are in the foreground the photographer must take particular notice of that old maxim—"expose for the shadows." If they are under-exposed they will appear dull and lifeless, their usefulness in the foreground being offset by

their degrading effect on the work as a whole.

It is for this reason that panchromatic films or plates and of the modern high-speed variety should be used when dealing with heavy shadows.

This particularly applies at the present time of year when the best cast shadows occur late in the day, and the light is inclined to yellow. A full exposure should be given in any case to get shadow detail.

In order that the high-lights may not become blocked and opaque owing to the increase of exposure for the foreground, development should be slightly curtailed, say four-fifths of normal time. A thin negative will result, but of perfect printing and enlarging quality, providing a suitable grade of paper is chosen. On this point it may be mentioned that a common error is to use a too-contrasty paper which makes the shadows over-strong and heavy.

The Amateur Photographer, 13th June, 1934: "... this alone, coupled with the outstanding beauty of the results obtained, should render it the ideal paper for exhibition prints."

GEVAERT GEVALUXE VELOURS

*A product without a parallel.
An altogether new effect.*

At the AUTUMN EXHIBITIONS

THE ROYAL.

"Another feature of the exhibition is the number of prints on a new variety of bromide paper (Gevaluxe), having a surface with the appearance of velvet, giving very luminous blacks of rich quality on a matt surface."—(From *The Year's Photography*.)

"... a fine, rich print on the new Gevaluxe paper which is proving so popular for exhibition work."—(*British Journal of Photography*.)

THE ROYAL and THE SALON.

"Only on the material side is there distinct evidence of progress, and it is probable that this year will be remembered for the introduction of a new printing paper that rather revolutionises the standard of quality. It is marketed as Gevaluxe, and gives a richness and depth in the darker tones that make most other printing processes look poor by comparison."—(*The Gallery*.)

THE SALON.

"... one of the many exhibitors who, this year, are using the new Gevaluxe paper."—(*The Amateur Photographer*.)

Kindly write for Gevaluxe Booklet, "A New Power in Photography," and copy of latest catalogue giving full particulars of all Gevaert Plates, Films, Papers and Amateur Ciné Films.

The Amateur Photographer

ELECTRICIAN

By
JOHN McOWAT.

ELECTRICAL apparatus used in amateur photography is confined mainly to that pertaining to lighting in some form or another. In the amateur studio, for instance, temporary lights have to be "rigged up" and dismantled, so that an elementary knowledge of practical electric wiring is essential. Without this knowledge, there is a very real danger of "short-circuits," personal electric shocks and even fire.

Fuses.

Before adding any electrical apparatus to an existing circuit the fuses should be examined to see that they are heavy enough to carry the extra current. This applies not only to the fuses controlling this particular circuit, but to the main fuses also.

The maximum safe working current of the usual sizes of household fuse wires is given in the following tables.

COPPER WIRES (usually "tinned").

| Diameter of wire in inches. | Equivalent S.W.G. size. | Fusing current in amps. | Safe working current in amps. |
|-----------------------------|-------------------------|-------------------------|-------------------------------|
| 0.036 | 20 | 62 | 31 |
| 0.028 | 22 | 41 | 21 |
| 0.022 | 24 | 30 | 15 |
| 0.018 | 26 | 22 | 11 |
| 0.0148 | 28 | 17 | 8.6 |
| 0.0124 | 30 | 13.5 | 6.8 |
| 0.0108 | 32 | 11.0 | 5.5 |
| 0.0092 | 34 | 8.6 | 4.3 |

LEAD-TIN ALLOY WIRES.

| Diameter of wire in inches. | Equivalent S.W.G. size. | Fusing current in amps. | Safe working current in amps. |
|-----------------------------|-------------------------|-------------------------|-------------------------------|
| 0.064 | 16 | 16 | 11.0 |
| 0.048 | 18 | 10 | 7.0 |
| 0.036 | 20 | 7 | 4.8 |
| 0.028 | 22 | 5 | 3.3 |
| 0.022 | 24 | 3.5 | 2.3 |

Now suppose that lamps, or other apparatus, of a total of 1,000 watts are being installed, and the supply voltage is 250. $1,000 \div 250 = 4$ amps. A number 20 lead-tin or number 34 copper wire is therefore suitable. On a 100-volt supply, the amps would be 10, and a number 26 copper fuse wire would be required.

It is advisable to use the lead-tin fuse wire for the smaller currents, and the copper wire for those above, say, 8 amps.

Flexible Insulated Wires.

When using high wattage lamps, it should be noted that the ordinary thin "flex" (i.e., the thin cord used for table lamps, etc.), will probably be too light to carry the current. Good substantial "flex" such as is supplied for electric irons, or small radiators, should be used. Alternatively, several "flexibles" can be connected into the one plug. If any doubt is experienced, an electrician should be consulted.

For total wattages over 200 or 300, the "flex" should be connected to a wall plug. If connected to a lampholder adapter, the lamp-holder springs may lose their temper and cease to function.

Finally, all flexible wires must be in

good condition, both externally, and as regards the condition of the rubber insulation. Otherwise, short-circuits, shocks, or fire may result.

Fittings.

All portable fittings such as switches, lampholders, etc., should be of the "all-insulated" type, to prevent danger of shock. *Any switches in the dark-room also should definitely be of this type.*

An exception to this will probably be the enlarger. Most of the newer enlargers are made of metal, in direct electrical connection with the metal lampholder. In this case, a triple flex should, if possible, connect to a "three-pin" plug, the third wire being an "earth" wire. It is connected to the metal case of the enlarger and to the "earth" pin of the plug.

The switch for the enlarger (or, indeed, any apparatus) should be connected in the "phase" or "live" wire, to ensure that the enlarger is "dead" when the switch is "off." An electrician will decide whether this is so in a few minutes.

Electric fittings, or apparatus of any kind, should never be touched with wet or damp hands. This is a real danger in the dark-room, where it is so easy to switch on or off the light with a finger wet from immersion in a solution or washing bath. This point cannot be too strongly emphasized.

It is also safer not to touch a metal switch, or other apparatus, when standing on a stone floor, or when touching metal pipes, etc.

Lamps.

The modern "half-watt" or gas-filled lamp attains a very high temperature, and must be kept clear of all paper, fabrics, or combustible material.

A lamp designed for a certain voltage must not be connected to a supply of a higher voltage, although the reverse is perfectly safe.

If the enlarger ventilation be reduced, the lamp (or lamps) will have a much shorter life, owing to the higher temperature it will attain.

Radiators.

Luminous radiators should not be used in the dark-room, or in any position where water or other liquid may be spilt on to them.

If an electric heater is required for the dark-room, the ideal is the enclosed tubular type. This is quite inexpensive; it can be obtained in any suitable length; spilt liquids cannot reach the elements; the case can be properly earthed; and it can be in commission when the fastest plate is being developed.

Radiators larger than 600 watts should not be connected to a "lighting" plug, unless it is definitely known that the wiring to the plug is sufficiently

heavy. The specially wired "heating" plug should be used.

Connecting Up.

Several lampholders can be wired thus. The lampholders are then said to be wired in "parallel" (Fig. 1).

Fig. 1.

"Series" wiring is shown thus, but this will almost never be used by the amateur photographer (Fig. 2).

Fig. 2.

Another connection which gives a "dead short-circuit" must be avoided at all costs (Fig. 3).

Fig. 3.

Wiring several banks of lamps to the one plug can be safely effected thus (Fig. 4):

Fig. 4.

Switches can be inserted as follows, firstly, to control all the lamps (Fig. 5):

Fig. 5.

Or one switch for each lamp (Fig. 6):

Fig. 6.

Take care to see that the insulation at the end of each wire is taken right up to (or into) the porcelain or bakelite of the lampholder, switch, etc. Bare ends will cause short-circuits.

Waterloo Bridge, before the trouble began.

WATERLOO BRIDGE is coming down apace ; soon it will be no more. Rennie's masterpiece will be a fading memory. Photographers will say to themselves, "Why didn't I get a series of photographs of the demolition while I had the chance ? " Well, it is not too late now ; but hurry !

Apart from the record aspect of such photographs, there are many good pictorial compositions to be secured. The complete bridge before the present trouble started was always a fine subject for the camera, and many exhibition pictures were made of it from different points of view not on the bridge itself.

These points of view are still available, as one of the illustrations herewith demonstrates. The fact that the structure is in course of demolition adds variety to the outline, and many good shots can be taken from various points on either side of the river. It is well worth an afternoon to stroll round and find these viewpoints ; there are many new ones that have never been made

Stone-masons at work.

The Demolition of

A Topical Subject that should not be missed by the Amateur Photographer.

use of yet for pictorial purposes.

It is necessary to have a permit to go on the bridge, but this can be obtained while you wait, on application to the demolition engineer's office on the Embankment close to the bridge.

An abundance of subjects will be found on the bridge, and not only

A view through one of the arches on the foreshore, south side.

is there plenty of human interest in the foreground, but the background is taken up with the modern buildings that now adorn the Embankment.

No difficulty will be found as regards light. The subject is as open to the sky as the country. A shutter capable of working at a speed of 1/100th of a second will be useful, as the workmen provide plenty of movement.

October 10th, 1934

Waterloo Bridge

By ERIC LEWIS.

Practically any type of camera can be used, but while a hand camera is an advantage for "action" shots on the bridge, a light tripod will prove useful for some of the river-side subjects. Fast plates or films should be used.

It is a subject that also has possibilities for the amateur ciné-worker. Different progressive phases of the work can be recorded, and if the bridge is visited several times comparative shots showing progress made will make a very interesting

Clearing the foundations of the roadway.

A view from the south side.

film. For record purposes the same procedure can be applied to "stills."

Some interesting and novel snaps can also be made from the bridge of some of the suppo.ing masses in the river, and of the assorted craft that are always passing directly underneath. This was not possible before the sides were removed.

The work is going on steadily and rapidly, and those who have occasion to pass over the temporary bridge on top of a bus can obtain a good general view of what is being done. They will note how quickly the structure is disappearing; already the parapets, balustrades, cornices and pavements have gone, and the contractors have started to fix steel girder supports under the arches.

At the same rate the arches themselves will vanish in a few weeks, and the final dissolution of Waterloo Bridge will be an accomplished fact. Modern photo-

graphy in the hands of both the amateur and the Press photographer will also have played its part in putting on record the passing of a noble piece of architecture.

One word of warning—the L.C.C. will not hold themselves responsible for your welfare, not even if a piece of pavement is dropped on your head, or if the whole bridge collapses, or even if you fall over the edge.

All this is embodied in the permit, and a form is signed to that effect. It is very necessary, as the present condition of the bridge is not too safe for the stranger who is careless. The bareness of the surface, the lack of side supports, and the numerous holes will all need watching, but the general effect is a fine one for the camera.

Constructing a steel gantry to prevent the arches collapsing.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

DEPTH OF FOCUS.

I HAVE used the expression "depth of focus" above because it has come into general use; but a more correct term is "depth of definition." In either case this is what is meant: If we focus a lens accurately on an object at a certain distance, other objects, both nearer and farther, will also be sharp; and the distance from the nearest to the farthest sharp object is the "depth of focus" in that particular case.

Strictly speaking, the sharpness of definition is at its best only at the distance focussed upon, and gradually deteriorates as objects are placed nearer or farther. We have therefore to decide on some standard of definition. To what extent may an object be "out of focus"?

We can imagine that we have focussed on a small bright light at a great distance, and that we have to use a magnifying glass to examine its image on the focussing screen. It is seen as a minute sharp "point" of light. The least change of focus blurs it; and we may suppose that the tiny, sharp point has become 1/100th of an inch across. Such a "circle of confusion" was once considered permissible; but if the image were much enlarged we should get a "blob" instead of a clear-cut point.

With modern enlargements from tiny negatives such a circle of confusion will not do at all; and we have to insist that the "point" shall not be more than 1/200th or even 1/300th of an inch in diameter. It is the difference in the standard of definition thus decided upon that leads to the discrepancies in the distances laid down in various depth-of-focus tables.

Once we decide on the allowable amount of diffusion in our negatives we can proceed to work out some useful figures

about focussing and depth of definition, and these figures will vary according to the focal length of the lens, and the stop used.

The first and most useful thing to find is what is called the "hyper-focal distance." This is the distance on which to focus the lens so that we get the greatest depth of definition, giving everything sharp (to the decided standard) from a certain distance to infinity. In fixed-focus cameras, and in most with a focussing scale, the lens is set for this hyper-focal distance, and not for true infinity.

You must not be alarmed, as so many are, if I give a "formula" for finding the hyper-focal distance. It may be set down thus:

$$(F^2 \times C) \div f$$

That looks rather mathematical, but it is as easy as possible. F stands for the focal length of the lens in inches; and "squaring" it is to multiply it by itself. C is the denomination of the fraction representing the circle of confusion (1/100, 1/200, 1/250th, etc.), and f/ is the number of the stop (f/4.5, f/8, f/16, etc.).

To take an example. We have a 3-in. lens, and we decide on a circle of confusion of 1/200th of an inch. On what distance should we focus the lens at f/8 to get the best range of definition?

$$(3 \times 3 \times 200) \div 8 = 1,800 \div 8 = 225 \text{ in.} = 18 \text{ ft. } 9 \text{ in.}$$

If we focus carefully on an object exactly 18 ft. 9 in. from the lens everything from *half that distance* (9 ft. 4½ in.) will be sharp, to the extent that any "point" will not measure more than 1/200th of an inch in diameter.

Suppose now we have a 10-in. lens at f/4. We shall then get:

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

$(10 \times 10 \times 200) \div 4 = 20,000 \div 4 = 5,000 \text{ in.} = 416 \text{ ft. } 8 \text{ in.}$
So that the nearest sharp point will be 208 ft. 4 in. away. If we worked out several examples we should find that the shorter the focus of the lens, and the smaller the stop, the nearer would begin the range of sharp definition; and the contrary.

After this, anyone with a fixed-focus camera should be able to work out the nearest point at which good definition begins for each stop in the lens. This should certainly be done, so as to avoid including any object that is too near the lens to be rendered with sufficient sharpness.

The little chaps in the illustrations were much too close to the camera to come within the range of good definition if the lens had been set for the hyper-focal distance. Let us work this distance out, the lens being a 6-in., and the stop f/8.

$$(6 \times 6 \times 200) \div 8 = 7,200 \div 8 = 900 \text{ in.} = 75 \text{ ft.}$$

Focussed at 75 ft. nothing would have been sharp nearer than 37 ft. 6 in., and the figures were only about a foot from the lens.

In Fig. 1, the gnomes were all in a row, and at f/8 were all sharp. (By the way, the figures themselves are not very clear-cut, but they were the best I could lay my hands on at the moment.) In Fig. 2 gnome A is where he was, gnome B about 2 in. back, and gnome C about 4 in. back. At f/8 A is still sharp, B is fuzzy, and C is worse. In Fig. 3 the lens, still at f/8, has been focussed on B. Now both A and C are fuzzy, A being a little worse than C. In Fig. 4 the lens is not focussed exactly on any one figure, and has been stopped down so that A, B and C are all as sharp as in Fig. 1.

I must leave till next week the method of finding the depth of focus when the lens is focussed on other distances than the hyper-focal distance.

W. L. F. W.

THOSE HOLIDAY NEGATIVES

By
M. HIRST.

DURING the holiday season every year many thousands of films must be exposed by amateur photographers, who, upon their return home, put them away until further prints may be needed from them. But the question is, how are they put away?

Very often about a dozen or more are stuffed into an envelope and put away for "safety"; but in the majority of cases the whole output of holiday negatives is shut away in a drawer (or drawers) without any protection at all. The result is that after an extensive search for a certain negative, it either cannot be found, or if it is unearthed, it is generally so scratched and kinked that it has to be destroyed.

The solution to this problem of being able to find any given negative at a moment's notice, free from abrasions, is to start a filing and indexing system.

This takes up very little time if negatives are filed and indexed as they are made.

Negative albums offer a compact form of storage for films, but a rather expensive one; the cost of filing one hundred quarter-plate negatives is about four shillings and sixpence, while by adopting the system outlined below it is possible to file over four hundred for the same money.

A wooden box to serve as a filing cabinet is the first thing to be obtained, and this can be home-made; the dimensions will depend on the size of the negatives. A good size for quarter-plates is $7 \times 5 \times 3\frac{1}{2}$ in.; this will hold about five hundred films. As these stand in an upright position some device will have to be fitted to prevent them falling over—a piece of wood sliding in a groove is best.

The only items that have to be bought are a moderate-sized address

book and a packet of transparent negative envelopes. Each envelope is marked on its top edge with a consecutive number, a negative is slipped within and stood in its proper place in the box. An entry of the subject is then made under its appropriate letter in the book.

Supposing one of the negatives was of the Tower Bridge, and its number was 7, an entry would be made under "T" somewhat as follows: "Tower Bridge, 7." It could also be indexed under "Bridge." In a month or so there might be four negatives of bridges, and the entry under "B" might run: 7, 16, 34, 115. By taking these four negatives from the file the most suitable one can be selected for the purpose in hand.

One last word of warning. Always see that a negative is replaced in its correct position in the file, otherwise chaos will result.

How I make my EXHIBITION PICTURES

No. CCL.

—
Mr. JOHN
ERITH.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"LAST year when I rashly agreed to explain to the members of the Croydon Camera Club 'How I make my Exhibition Pictures,' a voice from the back of the audience informed me that it would be more interesting if I would explain *why* I made them. This was something of a poser, but I replied that if I had not done so, I should have been sticking straws in my hair before now. Most of the audience at once expressed the opinion

that the talk would have been much more entertaining if I had not made any exhibition pictures; and after a bit of a dog-fight I was pressed for an explanation of my statement.

"The reason that most professional photographers make pictures for exhibition is two-fold. Firstly, because they have to make most of their pictures to please other people, so that it is a necessity sometimes to make a portrait entirely to please themselves. (I believe that at the Croydon Camera Club I further explained that one of my most successful pictures was made as a reaction from having to photograph a spoilt child with cauliflower ears and protruding teeth.) Secondly, by sending his best work to the leading salons, the photographer is able to judge whether his pictures are up to international standard.

"When pictures are rejected, the photographer first grouches loud and long, then condemns the selection committee, and finally studies the offending print carefully to see what is wrong with it. Often he finds technical or artistic faults which make him wonder how on earth he ever liked the thing; and occasionally the judges have been at fault, and the picture is accepted when sent to other equally important salons.

"As to how I make my exhibition pictures, I have no revolutionary secrets to convey. Most of them are made in my studio, by half-watt light, on Eastman Portrait panchromatic films. The negatives usually include more of the subject than I wish to use in the finished picture, and a contact print is made and trimmed carefully to secure the best composition. Finally, an enlarged print is made by projection, and then the picture is put away for about six months. If at the end of this time I still like it, it goes to the exhibition; if not, to the waste-paper basket. I usually make about thirty pictures to please myself during the year, and roughly two-thirds of this number find their way into the exhibitions. Although I have exhibited in different parts of the world, I concentrate on the exhibitions at home.

"Having been trained at one of the principal London Art Schools, I naturally believe that it is advisable for a photographer to have studied drawing from the antique and from life, and to have a rough knowledge of composition, if his work is to be consistently successful. If more photographers had this knowledge, the selection committees would be spared a good deal of eyestrain, and photographers themselves much wasted effort."

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

THAT there is a merit and satisfaction about a subject which is well composed and makes up well no one would deny, but it does seem as though, in most photographic circles, composition is given such a degree of importance, so disproportionate to its actual place in the scheme of things, that it becomes nothing more or less than a distracting bogey.

Composition's Province.

As far as pictorial photography is concerned, its province is no more than so to arrange the elements of which the subject is composed, its masses, lines, and light and shade, that they convey a sense of order, and, in so doing, to enable the pictorial motive to be intelligibly displayed.

Viewed in a common-sense way, that is all the art of composition amounts to. If a subject looks right, it probably is right, whether it has been deliberately composed or not; but, instead of looking upon the arrangement of the composition in a simple sort of way such as this, a lot of unnecessary mystery has been attached to it; it has been hedged about with complicated rules; divided into innumerable forms; and all sorts of fantastic and impracticable formulæ, mathematic and diagrammatic, have been introduced under the guise of providing a working system. None of these have more than an academic interest, if that, and certainly do not approach in usefulness that feeling for order and good taste which all of us possess to a greater or less degree.

If it does not happen to be innate, it can be acquired and developed as far as necessary, but composition is not at all the difficult thing to understand that many would have us believe; nor is it essential that any considerable study should be made of the theories and rules laid down in the textbooks and elsewhere.

Practical Application.

Even if these rules are intelligible—and, in many cases, they are not—their application in practical work is often a sheer impossibility, and, where reference is made in these columns to any particular form or any specified position, it is only with the idea of indicating or conveniently describing the method whereby the required

sense of order has been introduced.

Many people have different conceptions of order. There is plenty of room for individual opinion, but, all the same, there is a standard which is acceptable to the majority, and it is pretty obvious, regarded in this way, that, to create a sense of order, there must be some sort of arrangement in definite order, and that the first step towards its establishment is the inclusion of an element that is chief in importance and first in that order.

Having regard to the way in which photographs are made, i.e., in a comparatively fractional space of time, it is scarcely possible, except with classes of work of the nature of still life, to make a composition, or to build it up, around a prominent feature in the way adopted by the draughtsman or painter; but it is possible, by selection, so to choose the subject and place it on the plate or film that one element is of supreme importance and the rest subordinate.

The Centre of Interest.

The group of trees in No. 4 of the prints reproduced on the opposite page—"June," by H. O. S. Bedgood—is the most prominent feature in the subject. Besides, there is nothing but the sky as a setting, and a foreground with a hint of distance, neither of which approaches the aforesaid trees in significance.

It is apparent, therefore, that the first requirement towards the creation of a good composition has been satisfied, for, in a simple sort of thing like this, the establishment of the one feature as the supreme attraction, or the centre of interest, causes the other elements to fall into a natural sequence, the foreground being secondary and the sky subordinate to that. The order is apparent and the composition acceptable.

The position of the trees in relation to the boundaries of the print, it is true, is a factor of some moment, but this, again, is a matter that is governed by common sense. No other position would serve as well. If they were put nearer the right-hand edge, there would be the suggestion that they were not sufficiently "in" the picture; if they were in the centre, the arrangement would seem stiff and formal; and if they were more over to

the left, there would be a feeling that the trees were inclining the wrong way.

Lack of Concentration.

Similarly, the group in No. 2, "Leading Hay," by W. B. Gibson; the tree boles in No. 3, "By the River," by A. Robinson; and the splash of sunlight under the bridge in No. 1, "The Old Schoolhouse," by Michael Wilkinson, form elements which exercise a supreme attraction in each case.

In No. 5, "Bournemouth Pines," by Harold Bullock, the reverse obtains, for, of the many pine trees, not one can be regarded as exerting a pull that is stronger than that of the others.

The impression that is conveyed is one of a lack of concentration following upon an absence of any sense of order. If one of the trees, or two or three closely grouped together, stood out from the rest so that their supremacy was unquestionable, order, to some extent, would be established, and the composition would assume a satisfactory form; but, in the present scheme of things, the interest that should attach to either one—or a group—is spread over too great a number and dissipated.

A like suggestion arises in the case of No. 6, "The River Dart," by D. Swinson, but the lack of concentration, here, rather arises from the inability of any one item to assume any significance at all than from a surplus of points of attraction.

The First Principle.

What is needed is something that, either by its physical prominence, brilliance or depth of tone, or a combination of them, will serve as the principal point of attraction.

A tree, a splash of light, or a figure would do, and, with that, the rest of the subject would fall into place. Its position would have to be studied, and somewhere about one inch from the left, near the rocks, would fit in with the rest of the scene quite well. Its effect would be to pull the composition together, and provide it with the feeling for order that is so necessary.

The need, in any subject, for a chief item may not be apparent at first, but it will become so very soon, and it is a sound practice to seek it as the first principle in arranging a composition.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"THE BOW," by W. T. Dawson.

APPROPOS of our remarks on the preceding page concerning the desirability of choosing a subject with an element so prominent that it is obviously the centre of attraction, this picture affords an instance of the wisdom of so doing. Even the most casual inspection reveals the bow of the vessel as the undeniable chief item, and the satisfactory arrangement of the composition is entirely attributable to its inclusion.

Not only is it shown on a scale that is vastly greater than any other single feature, but its mass, its weight of tone, and the fact that within its outline are contained the brightest lights, make it the indubitable object of supreme importance. Having been selected both in this capacity and as the foundation of the arrangement, the remainder of the items composing the subject material fall, naturally, into a subordinate place, and a sense of order is established.

On these grounds alone the composition could be regarded as acceptable, but included in them are minor factors which contribute to the feeling of order, and there are also other features which enhance the suggestion.

In the main, these are open to explanation on the same common-sense lines to which reference was made overleaf. For example, the position in which the vessel (1) is placed, as in the case then discussed, is at a sufficient distance from the edge to avoid the impression of bad spacing, and not near enough to the centre line to create a feeling of formality or to suggest that the setting is restricted.

Put in another way, its placing is that which would be given if the various elements were dispersed and required to be assembled in the best possible order, or, if described in a conveniently descriptive way, its position is athwart two of the intersecting points that would be formed if the

print were divided into thirds vertically and horizontally. These points are often referred to as the strong points of a picture, and so they are; but they are not so because of any mysterious virtue inherent in their positions, but simply on account of the fact that, in the great majority of cases, they afford a spacing

inclusion of the second vessel (2). Its function is twofold. It permits the scale of the first-mentioned boat to be made manifest, so stressing its importance, and at the same time provides an element which offers a sort of counter-weight to what would otherwise be an overwhelming mass on the opposite side. It forms what is known

in compositional terms as a balancing accent, and provides a balance of unequals. The principle is much the same as that of a weighing machine where a heavy weight is balanced by a lighter by being removed to a greater distance from the fulcrum. The greater the weight, the greater is the space along the lever arm between the fulcrum and the balancing weight, and similarly, the larger the mass of the principal item the greater the distance of the balancing accent, regard being had, also, to the relative proportions of the two masses.

Moreover, the significance of the vessel (1) is again emphasised by the feeling of enclosure suggested by the darkening of the sky in the upper reaches, and by a similar lowering of tone towards the base. This owes its effect to the attraction exerted by a light in an area of darker tone, by which the eye is directed towards the more central portions of the picture, and so, indirectly, to the vessel itself. It forms a finishing touch, as far as the composition is concerned, and rounds it off.

In addition, the gradation of tone in the sky conveys an impression of luminosity and space. This is highly pleasing,

and, indeed, furnishes that mood of nature which provides the pictorial attraction. That it is suggested is a tribute to the arrangement of the composition and the sense of order so incorporated; but that arrangement is not the difficult thing it is made out to be, provided the essential centre of attraction is first selected, will no doubt be now appreciated. "MENTOR."

that satisfies our sense of rightness.

Their adoption as the placing for the chief item avoids the suggestion of weakness that arises from a position too near an edge, and the feeling of over-preciseness or symmetry which follows upon the choice of a position on either or both of the centre lines.

So much for placing. Another factor of some consequence is the

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Ciné Subjects and their Treatment

By M. A. LOVELL-BURGESS.

NOW is the time in amateur ciné studios when the question of treatment follows the choice of theme or subject.

We speak sometimes of the film as a new art medium, but cinematography in itself can never be an art. It can be compared to the disc of prepared wax which records the voice—but with this difference: cinematography records objects and movement. How those objects and movements are expressed—for expression is the essential quality of any art—determines the artistic values of the film, and rests with the personality of the director and the technique of the camera-man.

What is it that makes a documentary film different from the reproductive effort known as the news-reel? In both cases the camera is directed at objects. Let us suppose, for the sake of illustration, that you have decided to make a film of your town or village. The first essential is that it shall have design and symmetry. In other words, it must have a pre-dominating theme, which also assures continuity, and several themes related, but subsidiary, to the main subject.

These lesser themes will bear a relation to the characteristics of your home town, and will be pastoral, industrial, social, scenic or agricultural. Here, on half a sheet of notepaper, you can have a primary, organic structure, but it will depend for its effectiveness on arrangement, and the arrangement will be largely influenced by the moods or impressions you wish to convey.

A would-be reformer of our social system, inspired by social anger, would make a very different film of, say, a manufacturing district, than would a contented imperialist whose sole aim in filming factories was to show the basis of England's greatness.

I can imagine the sociologist introducing shots of sinister-looking factory sirens sounding the hours of toil; of thousands of weary workers clocking in with slave-like precision; montage shots of feet, old and young, driven

factorywards by the same necessity of want to the same uncreative toil. There would probably be panoramas of chimneys, and gaunt mills, and homes dominated by the menacing shadows of iron foundries. There would be repetition of the terrific forces of machinery with, for human element, grim humour such as was displayed in the war years.

The imperialist would probably direct his ciné camera at rows of smiling, silk-stockinged girls, in large, well-lit factory interiors; would show pictures of happy employees at play in grounds provided for them by benevolent employers; would include glimpses of industrial debating societies, amateur theatrical rehearsals,

choir practice, Saturday afternoon football. And all would be subsidiary to the main theme of England's prosperity, culminating in panorama shots of great ships, laden with English-manufactured goods, making their majestic way out to sea to the rich imperial markets of the world.

Cause and Effect.

Turning for a moment from treatment to camera technique, I should like to draw attention to the often-neglected possibilities of silhouette shots. Figures in some sort of procession, seen against a sunlit stretch of water, trees dark against a glimmering lake, a dominant close-up of a dark hull, the angle or shadow of

The sky in autumn. The rapid weather changes that occur at this time of year produce wonderful and quickly-moving cloud forms. They can be made the basis of a most interesting film that every keen amateur ciné-worker should attempt, particularly if attractive and seasonal suggestions of foreground are included.

an archway, are of value in providing, by contrast, an element of drama. Evening shots taken against the light—with the aid of filters—can give beautiful results.

If a suggestion of colour is required there are various colour processes on the market, but a simple method of tinting certain sequences of the film is to

make use of a multi-colour wheel.

Sometimes an interior scene offers unexpected possibilities to the amateur worker who may find himself handicapped by the absence of lamps and reflectors. If two mirrors can be borrowed from a neighbouring house, the light—providing it is a sunny day—can be caught on one mirror and

thrown on to the subject via the second reflector.

Repetition is effective in showing dramatic force, whether in nature, machinery or man. Cutting can often help here, but it needs to be skilfully done, not only in relation to the rhythm of each shot, but also to the pattern of the film as a whole.

Professional Standards and the Amateur Cinematographer

By ERIC HUGH COOPER.

TO debate which sets the pace, the amateur or the professional, is to be guilty of rehashing the old saw about the hen and the egg; nevertheless, for all practical purposes, the difference between the two is decidedly marked.

"Home-made" films are tolerated much in the same way as (to use well-known words on a different subject) "a dog walking on its hind legs; it isn't done well, but we are surprised to see it done at all."

We have come to regard somewhat blasély the cinematographic masterpieces we may see every day for one shilling, causing, no doubt, many of us to open our eyes since viewing our own sad efforts.

What constitutes this amazing difference?

Is it lack of apparatus, or solely a question of being blind to one's own faults when competition is not our taskmaster? The film companies do not stint themselves for apparatus, naturally; to do so would be suicidal, but the main difference lies elsewhere.

The difference between a well-written story and the same story badly told is nearly always due to failure to eliminate the superfluous, so it is with ciné photography.

Here are a few tips which even the British film industry has not yet taken to heart, which go a long way towards the unquestionable superiority (technically) of American films, and if applied by amateurs would certainly improve their films a hundred per cent.

Assort your camera angles; there is nothing more boring than monot-

onous right-angles on the same plane. I once heard an able critic remark on a certain professional production: "A few shots upside down would have relieved the misery." If you have to use several feet of film per each hundred as an explanation, try something else. Explanation superimposed on what should be self-explanatory is as bad as using several adjectives where none is necessary. This applies to sub-titles as much as to actual photography.

Your audience does not hanker after a conglomeration of affectionate scenes between one of your characters and his dog. That he and the animal are on good terms they take for granted without having it repeatedly thrust upon them; the fact is so obvious that additional notices become mere pedantry.

Similarly, man and wife should be evident without explanation, the fact that they were or are in love is superfluous; don't bore your audience with the most tiring of all mistakes (photographic-dramatically speaking), matrimonial bliss; either keep matrimony out altogether, or give your audience another woman; other women are far more interesting.

Then if you must have love scenes—and you must unless you wish to impart to your productions the palatable qualities of rain-water—have real ones; an amateur in a love scene is often as bad as the dear vicar as the skipper of a 'Frisco windjammer.

Another frequent amateur mistake is to allow their characters to "hang" in mid-air for a matter of seconds, as

though the entire thing has momentarily gone off the boil. Keep things going, carry your audience from beginning to end.

Don't let the secret of your anticlimax pop out before its time, many otherwise good films are spoilt by this weakness.

Obviate "one-spot" action so common to stage productions. Make your sets long enough for your audience to feel settled, don't flit from set to set, and don't make the unpardonable error of supposing, as many amateurs do, that because the naked eye derives enjoyment from roaming carelessly round 360 degrees, the effect of a cinema camera being swung hither and thither is equally as pleasing; it isn't, it is almost as disturbing as looping the loop. Make your "camera stills" long enough to be completely taken in by your audience, and when you pivot do it slowly.

Sub-titles are often guilty of remaining on the screen for twice and even thrice the necessary period; make their time as short as safety allows. Nobody likes to sit confronted by words they have read three times. I found myself wondering on one occasion if the projector had ceased running, so long had a sub-title lingered.

Finally, get close to your subject. Amateurs are especially fond of a reversed binocular effect plus a foreground that looks like a desert.

If you are capable of obviating all these errors you will have achieved more than the entire British film industry, so good luck; it can be done.

Ensign, Ltd., of Ensign House, 88-89, High Holborn, London, W.C.1, are well to the fore this year in the issue of catalogues and other literature dealing with seasonable amateur cinematography. In particular, their booklet "Ensign Home Ciné Projectors and Accessories" is worth the attention of every amateur cinematographer. It is full of attractive matter, and many useful suggestions will be found in its pages. The Ensign Film Library catalogue and "Ensign Film Library News" should also be seen. Among the accessories that they have just announced are several new film-editing aids which will appeal to every worker. All these are of novel design, and particular mention should be made of the Ensign Universal Film Splicer, Editor and Rewinder. These universal accessories enable 16-mm. silent, 16-mm. sound-on-film, both D.I.N.

and R.C.A. standards, 9.5-mm. films and 8-mm. to be used. Messrs. Ensign advise us, however, that these accessories will not be ready until December 1st. Other interesting new lines which are available at the present time include a 400-ft. 16-mm. reel of entirely new construction, Ensign carrying-cases, and 200-ft. projector reels and reel tins. Messrs. Ensign contemplate no change in the Silent Sixteen projector, but a "still" picture attachment can be supplied to earlier models of the "300-B" projector, which can be simply fitted without the necessity of returning the machine to the makers. Every reader of *The Amateur Photographer and Cinematographer* should apply to Messrs. Ensign, at the above address, for their full range of illustrated catalogues and price lists. They are well worth having and will be sent free.

October 10th, 1934

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

D. AND P. METHODS.

SIR,—As a new reader of *The Amateur Photographer* I am not at all sure whether the subject on which I write has before been discussed, but I think it might be of interest to at least a section of your readers.

In connection with journalistic work I use a fair amount of photography, mainly in connection with professional and engineering work, and not having the facility, and perhaps insufficient experience, I have to rely on the D. & P. men for the results from my photographs. So far, I have been unable to find any D. & P. man who will take an intelligent interest in my needs in the matter of producing saleable results from my negatives. I am told quite candidly that it does not pay to give the individual attention necessary to this, and they regard their D. & P. work in the light of mass production, standardised on average results.

It seems, therefore, that people like myself are faced with the alternatives of either carrying on with mediocre results or attempting the work oneself, the latter alternative necessitating the provision of a considerable amount of expensive apparatus.—Yours, etc.,

L. M. REEVES.

THE PERFECT CAMERA.

SIR,—I should like to endorse T. V. Kanna's remarks *re* the Exakta. I also should like to see the plate back introduced, it would then become a very useful camera, a single exposure could then be developed without waiting for the whole strip to be exposed.

I think it a pity the popular 2½-in. square was not introduced instead of the V.P. size; one need not adhere to the square when enlarging. Leaving the Exakta I think it was a pity when the T.-P. people introduced the horizontal reflex at a low price they did not make it 2½-in. or 3-in. square. That the square is popular is proved by the great number one sees in use, and I think, even now, if the T.-P. people designed a model it would

become very popular, especially as the price would be much lower than the Continental twin-lens type of which one sees so much. Another feature I should like to see introduced would be that of a lens of a little longer focus than usual, then I venture to say, although not the perfect all-round camera, it would certainly be near to being the perfect hand camera.—Yours, etc.,

R. CLARK.

WHITE BORDERS.

SIR,—I do not agree with your authors, and the authors in various photographic publications, that masking is necessary to obtain neat white borders upon prints.

It is common knowledge that the majority of printing frames are constructed so as to produce the size of print they are made for with a clean white margin.

I purchased a packet of masks, but I cannot say that the quarter-inch borders they produced enhanced my prints; although the oval masks were very effective.—Yours, etc.,

JOSEPH KELLY.

INDOOR PORTRAITS.

SIR,—I read with appreciation the article "The Indoor Portrait Season Begins," on page 282 of "The A.P.," in which suggestions as to making the best of home portrait negatives, which include irrelevant and ugly details, were described.

It appears, however, in waxing eloquent on his subject, the writer missed an obvious pitfall that may be encountered, noticeably shown in example enlarged illustration No. 2 in the article, where the charms of the portrait are somewhat marred owing to the lady possessing an earring and pendant owning the magical property of being able to defy gravity.

The ornament in question hangs at the disturbing angle of about 60 degrees, although I see in the original small print, even if the neck of the sitter is a little strained, that the pendant is in its natural position.

Although the error is rather glaring in the enlargement, perhaps one could answer to any "clever" remarks from critics like myself that a strong wind blowing from the window towards the sitter had caused the deviation from the vertical of the inoffensive earring.—Yours, etc.,

E. STRUTT.

The Amateur Photographer & Cinematographer

CLOSING DATE
Wednesday, October 31
1934

ANNUAL Lantern-Slide Competition 1934

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in "The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in "The A.P." prize set which circulates throughout the British Isles, can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that

the awards are made to individual slides and not to sets; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of "A.P." Prize Slides should hasten to do so and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Wednesday, October 31st.

Classes and Subjects.

- CLASS I.—Landscape with or without figures, sea subjects and river scenery.
CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.
CLASS III.—Architecture, interior and exterior.
CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

- CLASS V.—Natural history subjects.
CLASS VI.—Lantern slides in colour (not hand coloured).
CLASS VII.—Champion class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{4} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of

the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Wednesday, October 31st. The slides must be well packed and addressed, "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Tenth Annual Open Photographic Exhibition of the Preston Scientific Society will be held in the Art Gallery of the Harris Free Library, Preston, from January 28th to February 16th, 1935. In addition to the usual classes there is one for cinematography. Entry forms are now ready and are obtainable from the Secretary, Mr. F. Wells, 65, Powis Road, Ashton-on-Ribble, Preston.

The Guildford and District Camera Club has just acquired a fully-equipped dark-room for the use of its members at 167, High Street, Guildford. Particulars of the Club are obtainable from the Hon. Secretary, G. B. Eden, 6, Woodbridge House, Woodbridge Road, Guildford.

The Kilburn and Willesden Photographic Society extends a welcome to all local photographers. The Society has recently secured more commodious and better-equipped accommodation at the New Willesden Technical College, Denzil Road, Willesden, and are looking forward to a most successful season. The Hon. Secretary, E. E. Telfer, of 14, Robson Avenue, Willesden, N.W.10, will forward full particulars of membership on application.

A sign of the season is indicated by announcements already appearing of Christmas mounts and folders for photographs. Messrs. Marshall & Co., of Ford Street, Nottingham, are well to the fore in this respect, and are making a special sample offer. Large parcels of assorted Christmas folders are offered at 1s., 2s. 6d. and 5s. Our readers should take advantage of this offer as early as possible.

Lost Camera.—A reader of "The A.P.", Mr. E. Woolley, of 10, Denham Street, High Street, Chorlton-on-Medlock, Manchester, 13, informs us that he has lost a No. 1 Folding Kodak, f/7.7 lens, in brown leather blue-lined case. It was left by the stepping-stones over the river at Grindleford, about a quarter of a mile from Grindleford Bridge. Will anyone who has seen or heard of this camera kindly communicate with above address?

A new prize competition is announced by the *News Chronicle*. The subject to be depicted is "work and industry." This can be illustrated by any kind of workman or by his environment, if treated pictorially. A first prize of £100, second £50, and third £25, will be awarded. Five special prizes of £10 each will be given for photographs symbolising industry—smoking chimneys, pitheads, etc. Full particulars will be found every day in the *News Chronicle*.

The Norwood Camera Club inform us that they have a new Hon. Secretary. He is Mr. A. W. Ketteridge, of 10, Dodbrooke Road, S.E.27. This club has also a few vacancies for members. A postcard to the above address will bring full particulars.

Amateur photographers in the Erdington and Wyde Green districts of Birmingham should note that the local society now include in the annual subscription of 10s. the use of a fully-equipped dark-room on the club premises, Church House, Erdington. There is also an enlarger available. Beginners and advanced workers are equally welcome. The Hon. Secretary is H. C. Chamberlin, and his address is 36, Grange Road, Erdington, Birmingham.

Circular tanks for the development of roll films of various lengths have become very popular recently, and justly so in view of their simplicity and certainty in action. The latest and one of the best is the "Labora" Tank, just put on the market by Garner & Jones, of Polebrook House, Golden Square, W.1. This tank is of the usual familiar

jar shape with lid and spindle. It is sturdily made of bakelite, and light in weight. Its outstanding feature and claim for novelty lies in the celluloid apron. This is specially designed with corrugated edges, each corrugation being pyramidal in form. Its construction allows more space between the film and apron for the developer to reach every part of the film quickly and freely when the tank is filled. The apron is cut to the exact size of the film in use, and it is impossible for the emulsion side of the film to touch the apron. In use it produces negatives singularly free from marks or abrasions, and is quite simple to use. The price for various sizes in film is 25s. Extra aprons and reels can also be obtained. For the film user who does his own developing it can be well recommended.

At the Exhibition of Cinematography, to be held at the Royal Photographic Society, November 6th to 30th, the meetings at which sub-standard films will be projected will be held on Friday evenings, November 9th, 16th, 23rd and 30th, at 7 p.m., and on Saturday afternoons, November 10th, 17th and 24th, at 3 p.m. Tickets reserving seats will be issued for these meetings without charge.

The Derby Photographic Society has just celebrated its Jubilee, and has issued a commemorative book giving a history of the society during the past fifty years. It has been in close touch with progress and celebrities of photography during the whole of that period, and has included many well-known names in its membership list. The publication is a handsome, well-bound volume that will have considerable interest to those who are concerned with the history of photography. It has been written by Mr. F. E. Birks, Hon. Secretary of the Derby Photographic Society, and is obtainable at 2s. 6d. Copies can be obtained on application to the Secretary at 16, Leacroft Road, Derby.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, October 31. Rules in the issue of September 26.

Seventh International Photographic Salon of Japan.—Osaka, October 20-26. Address all communications to The International Photographic Salon, Tokyo, Asahi, Shimbun, Tokyo.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29-November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Open, October 17-20. Secretary, E. George Alderman, Ruardean, Newton Street, Rotherham.

Paris Salon.—Open, October 6-21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9E).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson & Sons, Ltd., Hendon Way, N.W.4.

Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26-December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.

Chicago International Salon.—Entries, November 1; open, December 13-January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8-January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 19; open, December 10-15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography. Antwerp, 1934-35.—Open, December 23, 1934-January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotograafische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotográfica de Madrid, Calle del Principe, 16, Madrid, Spain.

Preston Scientific Society Open Photographic Exhibition.—Entries, January 11; open, January 28-February 16. Exhibition Secretary, F. Wells, 65, Powis Road, Ashton-on-Ribble, Preston, Lancs.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25-March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester.

City of London and Cripplegate P.S. Annual Exhibition.—Closing date, February 11; open, March 11-16. Exhibition Secretary, J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS., or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Blue Prints.

Can you tell me of a book giving instructions for preparing paper to make "blue prints"?

J. L. R. (Abersychan.)

The sensitising of such papers as you mention is dealt with in various textbooks. In the "Dictionary of Photography," published by this firm, it is treated under the heading of "Cyanotype," where the information occupies five pages of small type.

Tank Metol.

I have an idea that you gave recently a metol formula for tank development, but if so I cannot trace it. Could you oblige me by repeating it?

F. E. S. (Dundee.)

We gave the following formula early in the year, and think you will find it quite satisfactory.

| | | | |
|------------------|----|----|-------------------|
| Water | .. | .. | 20 oz. |
| Sodium sulphite | .. | .. | $\frac{1}{4}$ oz. |
| Sodium carbonate | .. | .. | $\frac{1}{4}$ oz. |
| Metol | .. | .. | 5 grs. |

Plenty of time must be given to secure sufficient density and contrast.

Metal Polish.

Is it a fact that liquid metal polish, as used for cleaning silver, etc., can be used as a substitute for Baskett's reducer?

D. E. (Monmouth.)

This is often done. We should advise you first to filter the polish twice through fine fabric to remove any possible solid particles which would scratch the negative.

Flat Negatives.

Why are the negatives I send so flat and lacking in contrast? I am given to understand that films taken in excessive light should have about double time development. Would intensification improve the negatives?

E. G. (Beverley.)

Judging from the negatives, we should say that they were very fully exposed but under-developed. You could certainly increase the contrast by bleaching and redevelopment in the manner we

have often described in our pages. We do not at all understand your reference to giving double the development time to films exposed in strong light. We should say the obvious course would be to give less exposure and normal development, unless we misunderstand your point altogether.

Exposures for Waves.

What is the longest exposure for breaking waves and running seas? What was Mr. Mortimer's exposure for his picture "The Cauldron"?

A. L. B. (Sandy.)

You will understand that only an approximate suggestion can be given as to the exposure for breaking waves. Mr. Mortimer's earlier wave studies were made with a camera fitted with a Thornton-Pickard roller-blind shutter on the lens, and this was worked at its highest speed, which would be approximately 1/80th of a second. In some cases the exposure was deliberately made as the breaking wave reached its highest point, there being then a moment of more or less suspended movement. We would suggest 1/100th of a second as the best to keep at the back of the mind when doing such work; anything much faster is liable to lead to what is called a "frozen" appearance of the water, without any suggestion of movement.

Fixing in Tank.

Is there an apparatus which would enable me to develop, fix and wash pack films without handling them? My clumsy fingers inflict damage on the films, and they get unfortunately scratched.

H. L. J. (Ealing.)

You can use the same tank for developing, fixing and washing, but in our opinion it is not very advisable. We suggest that the best way is to learn to handle the films with care, as it is quite possible to avoid any damage whatever, even while the films are wet.

Local Reduction.

Some of the skies in my negatives are too dense for normal printing. Is there any successful method of reducing these parts? L. A. W. (Eastbourne.)

The question of local reduction cannot be dealt with satisfactorily in a brief manner; it is much too complicated a matter for that. In some cases you could probably satisfactorily use the method of persulphate reduction, which would reduce the densest parts principally; but even this demands some knowledge and experience.

Making Stops.

I wish to calibrate the stops on an unmarked between-lens shutter. Can you give me a formula for calculating the aperture of the diaphragm?

T. T. (London.)

You can only calculate your apertures approximately, but with sufficient accuracy for practical purposes. You must first know the exact focal length of your lens. You can then remove the front combination, measure the diameter of the opening in the diaphragm, and see how many times this is contained in the focal length. That will be the nearest you can get to arriving at the f/ value of that particular opening.

Dark Corners of Print.

What causes the dark corners in some prints, as in the example herewith? I have noticed them in photographs I have taken with a filter.

J. A. S. (Kensington.)

We published an illustrated article some time ago showing that a lens hood is liable to cut off the corners more and more as smaller apertures are used, but this does not apply to the use of an ordinary filter. When dark corners appear in such a case it suggests that the lens does not evenly illuminate the whole of the negative surface.

Factorial Development.

Will you let me know how to convert one Watkins factor into another? Johnson's M.Q. developer has a factor of 18, and they recommend 20 minutes at 60° Fahr. What would be the development time for a factor of 12?

G. M. N. (London.)

Judging from your letter we think you are confusing two entirely different things. If the developer has a factor of 18, it means that the total development time is 18 times as long as the time for the first appearance of the image, while a developer with a factor of 12 takes only 12 times as long. When Messrs. Johnson talk about 20 minutes at 60° Fahr. this is time and temperature development, and not factorial development at all.

Proprietary Developer.

Some years ago I tried a proprietary developer in powder form, which was made up into a solution, kept for months, and could be used to the last drop. Can you give me a formula of a like nature?

H. W. G. (Chingford.)

We have no idea as to the composition of the developer to which you refer. There are several single-solution developers on the market that will keep in good condition for a long time, and only need dilution according to instructions to make them suitable for negatives, bromide and gaslight papers. An M.Q. or similar developer supplied in powder form would do the same thing. Any dealer can supply either.

The AMATEUR'S EMPORIUM

Business Notices Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watco, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less 1/-
 1d. for every additional word.

PROFESSIONAL AND TRADE:—

12 words or less 2/6
 2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Portford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26B, Renfield Street, Glasgow, C.2.

Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

ZEISS Miroflex 3½×2½, last year's model, f/4.5 Tessar, complete with 6 slides, F.P.A., filter, etc., in leather case; cost nearly £50, £25.—R. H. Morton, Dunvegan, Wishaw. [3992]

Hospital, Gt. Yarmouth. [4015]

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

ICA Bebe 3½×2½, Zeiss Tessar f/4.5, Compur shutter, 4 slides, Alpha screen, £9.—Chapman, 3, Stechford Rd., Ward End, Birmingham. [4009]

Granville

Photographic
Products

—ARE GUARANTEED
FIRST QUALITY

All Granville Papers and cards are subject to a strict process of testing before being offered for sale; every sheet being thoroughly examined before leaving our works. Granville Papers contain a high content of silver, and produce vivid sparkling prints. Speed, Latitude and Gradation are further characteristics which have made Granville Products so universally popular. Note the prices.

GRANVILLE DE LUXE PAPERS

FOR MINIATURE CAMERA NEGATIVES

'PRAXIDOS'

VERTICAL ENLARGERS

PRAXIDOS 'O'

Semi-Automatic

The Semi-Automatic Praxidos can be set for any degree of enlargement without the slightest trouble. There is no wire cable, no counter-weight. The lamp-house can be raised or lowered by releasing a lever, and is automatically locked in place when the desired size of enlargement is obtained. Focusing is completed by using the helical focussing mount of the lens.

No. 453. Praxidos O, with 6-cm. f/4.5 anastigmat lens with iris diaphragm, for 4 x 4 cm. (1 1/2 x 1 1/2 in.) or smaller negatives, 11 to 8 times **£7:12:6** (linear) ...

No. 463. Praxidos O, with 7.5-cm. f/4.5 anastigmat lens with iris diaphragm, for 6 x 6 cm. (2 1/2 x 2 1/2 in.) or smaller negatives, 11 to 6 times **£8:5:0** (linear) ...

Prices of Condensers:

80-mm. Single Condenser, for 4 x 4 cm. size... £1 1 6
80-mm. Double Condenser, for 4 x 4 cm. size... £1 13 6
95-mm. Single Condenser, for 6 x 6 cm. size... £1 14 8
95-mm. Double Condenser, for 6 x 6 cm. size... £2 8 6

ENSIGN "MAGNAPRINT"

For 3 1/2 x 2 1/2 or 4 1/2 x 3 1/2 in. negatives.

Double-lined lamp-house fitted with lamp-holder. Plated brass tube supports, numbered for focussing. Ensar f/6.3 anastigmat lens, with iris diaphragm. Silvalux diffused lamp, alternating with red lamp fitted to standard. Carrier with masks for all sizes including half-V.P. and Leica. [0103]

V.1. Takes 3 1/2 x 2 1/2 in. and all smaller negatives, also large portion of 1-plate, 4 1/2-in. condenser, Ensar f/6.3 lens, enlarges up to 15 x 10 in. **£7:10:0**

V.2. Takes 1-pl. and 9 x 12 cm. and all smaller sizes, 6-in. condenser, Ensar f/6.3 lens, enlarges up to 20 x 15 in.

£10:10:0

Lamps extra.

THE 'AKRISKOP'

will enable you to obtain absolutely critically sharp enlargements from your small negatives with any vertical enlarger. Simple to use, and positive in results, the Akriskop eliminates all waste due to poor focussing, and assures the best possible results from your negatives. It is accurate to a microscopic degree which cannot be attained by the unaided eye.

Price £2:17:6

"LARGODREM"

ELECTRIC EXPOSURE METER FOR ENLARGING.

The perfect exposure meter for use with any make of vertical enlarger. The "Largodrem" is simply laid on the baseboard, the light switched on, when the correct exposure for any make of bromide paper can be read on the scale. Obtain one of these invaluable meters and ensure correct exposure with every enlargement you make, and avoid wasting paper.

HAND CAMERAS

Third Edition

By R. Child Bayley

AN outstanding feature of this book, which makes a special appeal to all amateur photographers, is a number of separately printed plates, all from hand camera negatives by the author. These are selected to show the very wide range of subjects accessible to the snapshotter, from pure landscape to tele-photographic portraiture.

Though primarily written for the beginner, "Hand Cameras" contains much of interest to the advanced worker, and should be in the working library of all who would attain to the highest degree of artistic excellence in their work.

1750****THIRTEENTH EDITION
WALL'S DICTIONARY
OF PHOTOGRAPHY**

AND REFERENCE BOOK FOR THE AMATEUR
AND PROFESSIONAL PHOTOGRAPHER

Edited and largely re-written by
F. J. MORTIMER, Hon. F.R.P.S.

All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on such recent developments as infra-red, high-speed and colour photography. The volume provides practical information in dictionary form on every phase of the subject—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. Its contents are made readily accessible by the extensive use of cross references.

Catalogues from any high-class dealer.

E. LEITZ (LONDON), 20, MORTIMER STREET, LONDON, W.1

New inexpensive KODAK EQUIPMENT FOR INDOOR PHOTOGRAPHY *at Night*

KODAK'S FAST panchromatic films, highly sensitive to artificial light, allow big reductions in exposure times. Handy, low-priced lighting aids provide brilliant, easily-controlled illumination in any room—valuable new equipment for the home portraitist and still-life worker.

KODAK SUPER SENSITIVE PANCHROMATIC FILM (Roll Film and Film Packs). Three times as fast as regular Kodak Regular Film in artificial light. Used with "Photoflood" illumination it gives well-exposed negatives with quite brief exposures.

"PANATOMIC" FILM (Roll Film and Film Packs). Not quite so fast in artificial light as Kodak "Super-Sensitive Panchromatic," but still very much faster to artificial light than regular Kodak Film. Fine-grain panchromatic emulsion ensures pictures of finest quality.

NEW "PHOTOFLOOD" LAMP fits into any electric light socket and gives intense continuous light. Little more than half the cost of earlier type yet $1\frac{1}{2}$ times as brilliant. Safety fuse incorporated. In all standard voltages 4/- each

"KODAFLECTOR" JUNIOR. A reflector to hold one "Photoflood"; increases efficiency of illumination $2\frac{1}{2}$ times. Supplied with ingeniously designed wire stand that can be stood on table, hung from picture rail, over back of chair, etc., in any one of a dozen useful positions. With 9 ft. of flex, but without "Photoflood" Lamp 6/-

"SASHALITE" BULB. The clean-working, powderless, successor to flashlight. Flash takes place within sealed glass bulb—no smoke, no dust, no smell. Each bulb gives one brilliant flash 10½d. each
Complete "Sashalite" Outfit, containing battery in holder, metal-faced, collapsible card reflector and 2 "Sashalite" Bulbs . . . 7/6

THE NEW "PHOTOFLOOD" LAMP.

THE "KODAFLECTOR" JUNIOR.

THE "SASHALITE" OUTFIT.

The all-British SOHO REFLEX

All who are primarily concerned in possessing a camera which may be relied upon for the finest possible work under the most exacting conditions, will find in the British-made Soho Reflex an instrument which will prove equal to every demand. Full information as to various models, and fitments, and the lenses available, will be forwarded on request.

In addition to its many other uses the Soho Reflex is invaluable in the studio for children's portraiture and similar work, where quick focussing of a difficult subject is essential.

Soho Cameras are world famous. There's a Soho Model British Camera to suit every purpose and pocket. Order from your dealer, or write for list to

SOHO LTD.

Soho Square, London, W.1

Telephone : Gerrard 2184.

THE BEST CAMERA IN THE WORLD.

INSPECT THE

Rolleiflex

It is a camera which bears the closest inspection. You cannot appreciate its many fine qualities by a cursory glance—nor even by reading our advertisements—we can only catalogue its many refinements and ask you to go to your dealer for a demonstration.

A single glance to compose your picture and control stop and speed adjustments.

Equipped with high-class finder and taking lenses for successful winter photography—indoors and out. Its construction allows full parallax compensation.

With Zeiss Tessar f/4.5 **£20**

With Zeiss Tessar f/3.8 **£22 10s.**

KODASCOPE 'D'

With 300-watt Lighting.

Plugs into the ordinary house circuit (A.C. or D.C.). Gives brilliant pictures. Measuring 30 x 40 in. Gives "stills" at turn of lever. Heat-absorbing device protects films from damage. Holds 400-ft. of 16-mm. film. Metal construction throughout. Beautifully finished in bronze. **£25 : 0 : 0**

Nine monthly payments of 58/4.

LEICA III WITH F/2 SUMMAR LENS

No matter how dull the weather may be, Leica simply insists on getting nothing but the best pictures. It has a colossal range of speeds from 1 to 1/500th second. Distance-measuring and lens-focussing are done in a single action. Takes 12 or 36 pictures at a loading. Easy to use and light to carry.

£35 : 5 : 0

Nine monthly payments of 82/3.

PATHÉ '200-B'

With 200-watt lighting. Picture 10 ft. wide easily obtainable. Flickerless projection, sprocket-fed. Threading one side only. Single nut tilting device. Works off 110 volts. With lamp, plug, dex, adapter and one empty 300-ft. super reel. **£15**

Nine monthly payments of 35/-.

'BOLEX' C916

For both 9.5-mm. and 16-mm. Films.

Entirely gear driven, there being no belts whatever. When fitted with a 50-volt 200-watt lamp and the equivalent of a three-bladed shutter, the screen luminosity is 130 lumens. **£46**

Nine monthly payments of £5 7s. 4d.

PICCOCHIC ENLARGER

For Piccochic, other 3 x 4 cm. and 35-mm. negatives. With condenser, electric fittings, and metal mask, 8 magnifications, f/6.3 anastigmat lens, in focussing mount, iris diaphragm and paper board.

£5 : 17 : 6

***The long nights are
coming -
Try this fascinating
pastime***

Take up lantern-slide making this Winter. There is nothing so satisfying to those who take a pride in their photography.

Even enlargements can never show the beauties which will be revealed to you when you see your pictures projected on a screen.

Nothing is simpler than making a lantern slide. Your negative is placed in the printing frame with an Ilford Lantern Plate instead of paper. Then a brief exposure ; develop and fix. Get a box of Ilford Lantern Plates to-day and follow the simple directions.

VOL. LXXVIII. No. 2397.

THE rose of Lancaster was vigorously waving in Mr. James Shaw's bonnet when he came south to deliver his lecture to an R.P.S. Exhibition audience on his county of counties. Does anybody think that Lancashire is "all Wigan"? Mr. Shaw will disillusion them. Why, man, he will show you landscapes which are the despair of every other county in England, not to speak of Wales. Do you know that the better half of Windermere is in Lancashire? Has it occurred to you that it is in Lancashire that Coniston Old Man raises his head? Have you ever thought of the fells and the rivers and the glories of Morecambe Bay? How little they know England who do not Lancashire know! Then Lancashire appears to have—or at any rate Mr. James Shaw with his camera has an uncanny knack of searching them out—an abundance of queer, quaint characters, engaged still upon ancient trades which have a touch of picturesqueness about them. Also it has delightful panelled halls, and schools and churches, enough to turn the three Ridings green with envy. In fact, if Lancashire—that is to say, Mr. Shaw's Lancashire—is not exactly heaven on earth, it runs heaven pretty close. And even Wigan—well, there was a Wigan man who died and interviewed Peter at the gate, and told Peter straight, "Look here, Peter," he said, "I wants thee to know, I didn't want to leave Wigan."

Doing and Dying.

Does anyone give a thought to the risks and discomfort of the photographer in getting a good picture? The Press photographers, we all know, pass through fire and flood and revolutionary bullets, exclaim-

TOPICS of the Week

A LONDON SNAPSHOT.

Trafalgar Day is October 21st, and Nelson's Monument in Trafalgar Square will afford a subject for many exposures.

ing "The picture's the thing." Some of them were in the Spanish revolution, and two of them had their cameras confiscated. One of these two was kept in confinement, but his camera was restored to him; the other was allowed to go, but his camera was withheld. One wonders whether each envied the other's fate, but perhaps between a pressman and his camera there is no sentimental attachment. But the ordinary amateur on occasion faces perils. One such bravely determined not long ago to photograph a piece of ornamental coping on the top of a large new building. The only way up was by means of a builder's ladder extending to infinity. He got a grudging permission from the clerk of the works, with an intimation that if he fell and broke his neck he must not expect too many wreaths at his funeral. Up the ladder he went, a ladder which, viewed from the ground, appeared to incline at the orthodox angle towards the building. Half-way up, as is a common experience with ladders, it appeared to him that the ladder was inclining in the other direction, and that its top was anchored on thin air. But with a wholesome fear of what the clerk of the works would say if he came down with his objective unreached, he persisted and found a 7-ft. plank at the top, from which he got his photograph. And he is rewarded by the remarks of those who see the work, "Ah, you used a telephoto, I suppose?" Whereupon he tells the tale and bulges the ladder.

Off Seasons.

We all have them. The photographer must not be discouraged if there comes a time when everything seems to go wrong. We all know

such times, when our fingers are all thumbs, when our work is not up to standard, when we are unfortunate in our subjects or clumsy in the use of our materials, or in one way or another "miss the bus." Nothing seems to turn out right. This does not apply just to one piece of work, but to everything we do over a certain period, showing that it is something in ourselves—something psychological—and not anything inherent in a particular job. It is not the lens or the film that is letting us down; it is a misplaced cam or nut or something in our own human mechanism. There are two consolations. One of them is that the same experience is common to every vocation and to every person. No one continues indefinitely as an instrument of precision, or is invariably attended by the same good angel of luck. Indeed, if we did hit the bull's-eye every time we should soon die of *ennui*. Were it not for its failures,

occasional or frequent, photography would lose most of its zest. The other consolation is that these things go by cycles, or waves, if you like to call them so, and the dip will soon be followed by the crest again. The off season must not be an excuse for putting things away in despair, but rather for learning its lessons with courage.

New Hope for the Eye.

Sometimes in these days when the whole world is microphoned and amplified we begin to think that the ear, having so much done for it, may oust the eye from its supremacy among the sense organs; that in the world of the future it may be more important to hear than to see. Therefore it is just as well to remind ourselves that the eye, too, is coming on. Some extraordinary things, for example, are now being done in eye surgery. We were shown an instrument the other day

for ophthalmic diathermy, which is in use at the great eye hospital, Moorfields, where some miracles have been wrought. Formerly a man with detached retina was given up for blind; now he may be the subject of a marvellous restoration. Perhaps, had this come about earlier, Delius need not have been blind, nor John Milton. Some wonderful glasses are also being brought out by ophthalmic firms. We always suspected our old schoolmaster of having glasses which enabled him to see what was happening behind his back, but we were shown glasses with an extended field by means of which the user could pretty well see all round him—a good idea in one-way streets. We have so often been told that the camera as an instrument of precision has beaten the eye into its own hollow cavity. Nevertheless, a good deal can be done for the eye in the way of improvement, and exploitation of its unimagined resources.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Circle of Illumination.

I have been experimenting with a rather old half-plate camera with a — lens working at f/6, and send one or two prints. You will see that the definition is none too good in some, and if I use the rising front I get darker corners as shown in others. Am I right in blaming the lens, or can you give some other explanation?

C. M. (Durham.)

The lens you have is rather old, but was considered a good one in its day. It is of rectilinear type, and most lenses of this kind had f/8 as their largest aperture, the larger stop in this case being for the sake of extra rapidity in cases where critical marginal definition was not imperative. You must remember that the standard of definition has become much higher since the introduction of the anastigmat.

Such a lens as yours has a curved (saucer-like) field, so that both central and marginal sharp definition can be obtained only by judicious focussing, accompanied by necessary stopping down. Moreover, not only definition but illumination falls off towards the margins of the field. The simple diagram will help to explain the points.

The outer circle represents the complete field of illumination of the lens; the inner circle represents that part of the field in which both definition and illumination come up to a passable standard, with or without stopping down. The rectangle represents the plate. In the first figure the centre of the plate is on the axis of the lens, and it is assumed that in this position the plate falls exactly but completely inside the satisfactory part of the field. It is evident from your prints that your plate is not so included; the corners run out slightly into the unsatisfactory region. This indicates that the lens is being used on a rather larger plate than it will cover adequately; it would be better on a 5×4 or a quarter-plate. In fact such lenses as the one you have can often be used as rather long focus lenses on such plates, which naturally fall in the best part of the field.

The second figure shows what happens when the front is raised. The circle of illumination is shifted in relation to the plate, two corners of which are now well within the satisfactory area, while two others are definitely out of it. You will see at once why you get two darkened corners when you raise the front, and if you examine the prints which show these you will notice that the other two corners are better both in definition and illumination than when the plate is central in the disc.

Your camera probably has a swing front, and you will find that by bringing this into operation when the front is raised you can get rid of your dark corners. At the same time this will "tilt" the field of the lens, and upset the definition. You will have to focus for the middle of the plate, and sharpen up the definition at the top and the bottom by stopping down.

We should advise you not to discard the lens. It is much too good for that, and for certain kinds of stand work will give a very good account of itself. Even when the extreme corners are not all they might be you can generally spare enough of the negative to eliminate them.

Choosing an Enlarger

Many of our readers must be considering the purchase of an enlarger, and be exercised in their minds as to which type to choose. In this article the advantages of each, as well as other matters, are dealt with.

ALTHOUGH photography in these days is practised all the year round, it is safe to say that although negative-making is still carried on, most photographers regard the coming season as one in which the making of lantern slides and enlargements plays a prominent part. There must be many of our readers who at this time are contemplating the purchase of enlarging apparatus, yet are in some doubt as to the type which will best meet their needs.

Types.

In common with modern cameras the modern enlarger has also been considerably improved with regard to design. There are two types which the photographer has before him, known as the vertical and the horizontal, and each of these has advantages to offer.

The modern vertical enlarger is a well-made instrument. It is as a rule made to focus by scale, and the photographer is not in doubt as to whether the picture is as sharp as it is possible to get it. This type is of great advantage to those whose sight is not of the best, and who find some difficulty in focussing.

These instruments are self-contained pieces of apparatus, they take up small space in operation—a point that is worth considering when dark-room accommodation is limited. On the other hand, the photographer is limited as to the size of enlargement, unless some modification of the instrument is employed, but as a general rule the maximum size is large enough.

These enlargers are fitted with anastigmat lenses of high speed, and exposures with them, from suitable negatives, upon rapid bromide papers, are reduced to a few seconds.

The older type of enlarger of horizontal form still finds many supporters. It is not self-focussing, and it is less rapid in operation than

the newer type. At the same time, there is no limit, apart from the size of the apartment and the bromide paper available, to the degree of enlargement permitted by apparatus of this type. Further, it is less costly. Another advantage is that there is greater extension, and sufficient to make lantern slides by reduction from larger negatives.

Condenser, or Diffused Lighting.

The older type of enlarger is fitted with a condenser in order to ensure even illumination of the negative. The vertical enlarger is generally fitted with a system of reflectors and diffusers by which the same object is attained, although in some cases a condenser is fitted as well.

The advantage of the diffused lighting system is that small mechanical defects, in the nature of minute scratches, as well as hand-work or retouching, are much less evident than is the case with a condenser. The latter is more speedy, but most high-grade enlargers of the vertical type are fitted with large-aperture lenses and powerful lighting equipment, so that the difference is less marked than it may appear.

The Lens.

This should be a good anastigmat, and there are enlargers made which will permit of the photographer's own lens being fitted. The old portrait lenses, while they give moderately good definition over the centre of the field, tend to fall off towards the margins unless stopped down.

A lens of poor quality will lose much of the fine definition of the original negative.

Illuminant.

While electric lighting is the ideal for enlarging the photographer who is confined to gas will find that this is quite satisfactory. This may mean that the enlarger will be of

the horizontal type, because some models of the vertical enlargers cannot be adapted for gas. The photographer who resides in the country will have to decide between oil, acetylene, or a lamp of the spirit vapour type. The last, provided it is kept clean and used with care, will be found quite satisfactory. This lamp cannot be used in an enlarger of the vertical type.

In General.

Such are the points which should have practical consideration before the enlarger is purchased. In addition, the photographer will want dishes of at least a size larger than the largest size of print that he contemplates making. Let them be of the deep and not the shallow variety. The latter cause spills, and are very difficult to use.

Lastly the photographer should invest in a good dark-room lamp, with a suitable screen for bromide paper, if he does not already possess one. A cheap dark-room lamp is a nuisance, and the best results cannot be expected under bad conditions of working.

Familiarity.

Having finally decided on the type of enlarger, and having acquired it, there is another important matter that arises. This is the question of learning exactly how to use the apparatus so as to get the best possible results of which it is capable. There are many who continue contentedly to use an enlarger in ignorance of the fact that they are not getting the best out of it. The instructions supplied with the enlarger should be most carefully studied, and all the directions as to manipulation and care strictly observed.

The apparatus should be stored where parts will not become rusty and so lose their efficiency and smoothness of working, and both lens and condenser should be spotlessly clean.

INFRARED for the Amateur

By J. INGLIS STEWART.

NOT very long ago, infra-red photography was looked upon as a scientific experiment, and a difficult one that could only be

more correct rendering. These plates, usually known as the self-screen type, are probably the most popular class amongst amateur workers.

Panchromatic films or plates are those that have been sensitised with the aid of suitable dyes to record all colours, but they are still very sensitive to the blue end of the spectrum, and have to be used in conjunction with a colour filter to give the best results. By the use of a correct light-filter more of the blue and violet is cut out, and it becomes possible to photograph red and blue in their correct tonal values at the same time on the same plate.

Beyond the visible red rays of the spectrum are the infra-red, a large band of active waves lying between light and heat which cannot be seen with the human eye. Plates have now been sensitised to record infra-red rays, but as they are also still very sensitive to other colours they have to be used in conjunction with a special light-filter that will cut out all but the infra-red.

These rays are present in every view or subject that can be presented to the lens of the camera, no matter whether it is a distant landscape or a group of people in a near-by street scene. In the ordinary way, however, they are "swamped" by all the other more actinic rays, which act on a photographic plate or film, and which are also present at the same time.

View from Hindhead, looking east.

Self-screen plate, 1/100th at f/5.6.

undertaken by experienced workers. With the discovery of new sensitising dyes and the production of faster infra-red plates, the process has come within the scope of the beginner, and lends itself to pictorial effects quite apart from the long distances that can be recorded.

White light is composed of a combination of all colours, and when some of the colours are separated by a light-filter, or individual colours reflected by certain objects reach a photographic plate, they affect it in different ways, according to the particular plate or film. For instance, all plates or films are sensitive to blue and violet, and if exposed in the camera to a view or subject comprising a number of different colours, the fullest exposure will occur where the blue and violet parts are recorded.

By staining the emulsion during manufacture with a suitable yellow dye, it becomes more sensitive to yellow light, and if a surplus of dye is left on the film this will act as a light filter partly cutting out blue and violet light, which will result in a

The same view, with infra-red plate and filter, 2 sec. at f/5.6. The longer exposure accounts for the blurred tree-tops due to movement caused by wind.

The V.N. SEMI- AUTOMATIC ENLARGER

3½×2½, f/4.5 Dallmeyer anastigmat for enlargements up to 12×10.....
Nine monthly payments of 20/5. **£8:15:0**
4½×3½, f/4.5 Dallmeyer anastigmat, for enlargements up to 15×12.....
Nine monthly payments of 22/9. **£9:15:0**

The ROLLEIFLEX

ABSOLUTELY AUTOMATIC

12 pictures 2½×2½ on standard 3½×2½ Roll Film.

Fitted f/4.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B.

£20:0:0

Nine monthly payments of 46/8.

Fitted f/3.8 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/300th sec., T. and B.

£22:10:0

Nine monthly payments of 52/6.

THE DEKKO CINE CAMERA

for 9.5-mm. films.
British Made.

20-mm. f/3.5 Dallmeyer anastigmat (fixed focus), interchangeable screw-in lens mount. Variable speeds, half to normal and slow motion, 64 pictures drive taking through full 30 ft. of film at one winding, telescopic tube finder. Body of special wear-resisting bakelite. All outside fittings and film gate chromium plated.....

Nine monthly payments of 14/9. **£6:6:0**

Fitted 1-in. f/1.9 Dallmeyer anastigmat, micrometer focus....

£8:18:6

Nine monthly payments of 20/10.

The EXAKT ENLARGER

Fitted f/4.5 Steinheil Cassar anastigmat, complete with condenser and orange filter. Very simple adjustment to obtain size of enlargement required.

Model Ia for 2.5-10 times linear enlargements from 4×4 cm. negatives
Nine monthly payments of 31/6. **£13:10:0**

If, therefore, these other rays are cut out entirely only the infra-red will remain active for taking the photograph, provided the plate has been specially sensitised for the purpose and a filter is used which permits only the infra-red rays to pass.

Water vapour is nearly always present in the atmosphere, and short wave-lengths such as the blue and violet are scattered throughout the atmosphere, resulting in a general diffusion that obscures detail in the distance. Green is less scattered, and yellow less still. It is for this reason that yellow diffusers are used on motor head-lights in the hope of seeing farther in a fog. Red is scattered less than yellow, and infra-red least of all.

It therefore follows that if a picture showing a long stretch of distance obscured by a blue haze is photographed only by infra-red rays, the rays at the blue end of the spectrum are entirely cut out and rendered

inoperative, and the detail in the distance will be much clearer.

Before taking an infra-red picture, the special filter must be mounted on the lens to cut out all other light, and, as it is not possible to see through the infra-red filter, the focussing must be done first. This, however, presents no difficulty, as on most amateur cameras the focussing is done by scale.

Naturally, as we are only going to expose by means of a very small percentage of the available light, we shall need to give a much longer exposure, and as a rough guide it will take about three seconds' exposure at $f/8$ on a fairly bright day, if the subject is an open landscape.

The two accompanying examples, taken from Hindhead within a few seconds of each other, show the characteristic difference presented by infra-red photography. The self-screen plate had $1/100$ th sec. exposure at $f/5.6$, and has only recorded the

foreground with a blank sky. The blue haze in the distance and in the sky has strongly affected the plate sensitive to and not protected from these rays.

The second photograph taken on an infra-red plate with infra-red filter had two seconds' exposure at $f/5.6$, and clearly shows detail in the farthest hills which could not be seen with the eye at the time the photograph was taken. The filter has cut out all the other rays, and only the infra-red rays of the subject have acted on the plate. The white clouds on a dark ground were practically lost to the eye, owing to the mist in the distance, and would certainly have been unphotographable on any ordinary plate or film.

Infra-red plates are developed in the same way as any other photographic plates, and, if a suitable green safelight is employed in the dark-room lamp, they may be inspected during development with as much ease as an ordinary plate in ruby light.

On Buying a Camera

By H. A. SHARMAN.

ALTHOUGH many tempting offers may come to some readers of "The A.P." from various quarters, they would do well to consider a little whether they would not do better to make their purchases through a dealer or a shopkeeper of repute, or through the advertisement columns of this paper.

In buying from second-hand junk shops or from strangers without reference, no doubt many bargains may be secured from time to time. Unfortunately, there is a certain amount of risk, apart from being "had" with a mechanically imperfect apparatus, in buying goods second-hand in this way.

Hire Purchase.

What would be the position if it transpired that the camera purchased belonged to some third party, and that person claimed it from the buyer? The person from whom it is honestly and innocently bought may have only received it on approval himself or under a hire-purchase agreement, or he may even have stolen it. Who is entitled to it, the original owner or the new owner?

In the case of a hire-purchaser attempting to sell the subject of the hire-purchase agreement, the question of whether the person from whom he obtained the camera or the person to whom he "sold" it has the better right to it, can only be answered after the agreement under which the

hire-purchaser obtained possession of it has been considered.

If the buyer from the hire-purchaser wishes to claim the camera as against the original owner he must show that not only was possession of the camera given to the hire-purchaser but also ownership, a position which rarely exists, as all properly-drawn hire-purchase agreements are, as their name suggests, only a "hiring" of the article, and no real sale or change of ownership takes place until the last penny has been paid.

If, however, it was a sale out and not in the first place an innocent buyer from the so-called hire-purchaser will be entitled to retain the camera; whereas if it was merely a hiring of the camera the original owner would be entitled to claim it.

Stolen Cameras.

We have yet to deal with the case of alleged sale by thieves and other persons who have obtained their cameras by some wrongful means. Again it is necessary to draw a distinction, in this case, between the different ways in which goods can be obtained by unlawful means. If the camera has been *stolen* by the seller, that is, if he has committed larceny, then a buyer from him, even though he knows nothing of the theft, will be compelled to hand over the camera to the person from whom it was stolen, on the conviction of the thief.

SOME NOTES ON THE LEGAL ASPECT.

Where, however, the article sold has been obtained by some wrongful means less than larceny; that is to say, where the "ownership" and not merely "possession" has been obtained by the swindler, as in false pretences, where the person who has been defrauded (i.e., the original owner) intended to part with his property—although his intention would not exist but for some false representation made to him by the offender, with the design of defrauding him—then an innocent purchaser is protected by the law and put in a better position than the original owner.

Buyers' Rights.

The innocent and honest buyer from the swindler has in the first place the right to retain the article until the latter is convicted, and secondly in order that the original owner may regain his property, he must obtain an order of the Court restoring it to him, which order will *not* be made to the prejudice of an innocent buyer from the swindler.

Thus, if the camera is stolen property in the strict sense of the word, a buyer from the thief stands little chance of retaining his purchase; if, however, he has bought from one who obtained it by making some false representation to the original owner, or by some other wrongful means, then his chance of retaining it practically amounts to a certainty.

October 17th, 1934

Amateur

By
BERNARD ALFIERI, *and*
JUN.

"Tom Jones." A close-up during a rehearsal by Walton Amateurs. Taken on the stage. Sasha Flash-bulb exposure, $f/4.5$. Super-sensitive pan. film.

THE amateur stage provides a fruitful subject for the enthusiastic photographer, and has unlimited possibilities for the use of a camera. With large-aperture lenses and the brilliant lighting of many theatres, instantaneous photographs may be secured from the auditorium during an actual performance, but this cannot be expected with the average amateur performance, whilst the value of unusual lighting effects can only be turned to advantage with the co-operation of the cast.

Few amateur societies or performers will refuse any *bona fide* camera enthusiast a chance to record scenes and costumes, and many of them will offer any amount of assistance during a dress rehearsal in order to obtain photographs of the play.

Most stages used by amateurs are lit brilliantly from above in such a way that the light is balanced with foot-lights from below, producing a most undesirable flatness of tone and lack of modelling, combined with an unevenness of illumination caused by an abundance of spotlight, which is so often only available from the top front. Although this method of lighting may be successful from the theatrical point of view, it is hopeless for the camera, and as soon as partial lighting is employed to produce an effect, there is little actinic value left to take the picture by.

On the other hand, the lights are usually more than would be required by the photographer, and by skillfully eliminating some of them, almost any type of lighting may be achieved,

"Dogs of Devon." A full stage effect by school-children at Kingston. Stage lighting, 1 sec. at $f/5.6$. S.S. pan. film.

A Nativity Play by Girls of The Shottesbury Homes. Half-watt stage lighting. $1/100$ sec. at $f/5.6$. S.S. pan. film.

lens of, say, $f/4.5$ can be used.

Often it is necessary to cover a considerable depth of focus in order to pose a picture to suit the scene without giving it the appearance of a set group, particularly where a number of people are posed and most of the stage is brought into use. Under these conditions the use of a portable lamp is out of the question, and it will be found best to have all the lights switched on, and then eliminate a certain number of them until a

Theatricals the Camera

A SEASONABLE SUBJECT FOR
THE AMATEUR PHOTOGRAPHER.

good lighting scheme can be found.

It must also be remembered that the lights are usually grouped in rows, one switch putting on all the footlights, another the first row above, and so on; but this difficulty is chiefly felt with the footlights, and it is an easy matter to cut out individual lamps by standing a piece of cardboard in front, or where possible removing the globe.

Naturally, a great depth of focus will necessitate a comparatively small

*Teddington Amateurs in "The Death of Cock Robin."
Sasha Bulb exposure, f/8. Super-sensitive pan. film.*

*Scene from a play by the National Physical Laboratory
A.D.S. at Teddington. Stage lighting, 1 sec. at f/4.5. Super-
sensitive pan. film.*

camera stop; but as the picture will have to be posed in any case, it matters little that the exposure will require to be a couple of seconds, and most scenes with the average amount of light can be taken at f/8 within this limit.

Individual character studies can often be arranged before or after a rehearsal, and with numerous stage props. near at hand there is enormous scope for this type of work; in addition to character studies, many plays favour old-time costume, and it is not unusual to find spinning-wheels and quaint old pieces of furniture amongst the props. that will help out a setting for the crinoline, or futuristic scenery in front of which the ultra-

provide the greatest gradation of tone, whilst reducing the hard whites which

modern type can be posed.

Although almost any type of rapid plate or film can be employed for stage photography, it is one of the cases where the real value of panchromatic material will be appreciated, and the extreme rapidity to half-watt light of the double-coated panchromatic plates and films will enable the shortest possible exposures to be made. These will

are often so prominent when photographing white costumes or light patches on the scenery by artificial light.

Almost any type of camera can be used for stage photography, but a tripod or other firm support is necessary. If it is a question of focussing on the ground glass instead of setting the lens by scale, it will be found an advantage to carry a small electric torch, over the front of which a piece of black paper has been stuck. A number of small holes are punched in the paper, and if one of the cast holds the torch at the point of focus, it takes but a second to sharpen the brilliant dots on the ground glass.

A little experience will soon enable even the novice at this kind of work to obtain successful results, and if he so desires he will find a ready sale for his prints among the cast.

*"Tom Jones." A full stage effect by amateurs at Walton, Surrey. Photographed by
stage lighting. 1/10th sec. at f/4.5. Hyper-sensitive pan. plate.*

With the Beginners

NOTES & NOTIONS for the LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

DEPTH OF FOCUS.—II.

LAST week I showed that it was an easy matter to work out the hyper-focal distance for any lens at any aperture; and that when the lens is focussed accordingly, everything from half that distance onwards will be sharply defined according to the standard of definition decided upon. Once this hyper-focal distance is known it is also an easy matter to work out depth-of-focus distances for any plane on which the lens may be focussed. The calculations are rather more lengthy, even if we do not trouble about odd inches.

General points to bear in mind may be mentioned first. If a lens is focussed on a given plane, other planes both nearer and farther away will be sharp at the same time. The distance of good definition *behind* the plane focussed upon is always greater than the distance *before* it. The longer

the focal length of the lens, the larger the f/ number, and the nearer the plane focussed upon, the shallower will be the field of good definition. Put the contrary way, short focal length, a small stop, and focussing on a distant object, give the greatest depth.

Now for the practical problem. It is: If we focus on a given plane, what is the distance of the nearest plane that will be equally sharp; and, secondly, what is the distance of the farthest plane that will be equally sharp?

Here is the rule for the first operation:

$$(H \times D) \div (H + D)$$

where H stands for the hyper-focal distance, and D for the distance of the plane focussed upon. As the rule shows, we divide their product by their sum.

Last week we found that the hyper-

focal distance of a 3-in. lens at f/8 was $18\frac{3}{4}$ ft. If we set the scale at 5 ft., what is the nearest plane that will be sharp?

$$\begin{aligned} (18\frac{3}{4} \times 5) \div (18\frac{3}{4} + 5) \\ = 93\frac{3}{4} \div 23\frac{3}{4} \\ = \frac{375}{4} \times \frac{4}{95} = 4 \text{ ft.} \end{aligned}$$

Here is the rule for the second operation:

$$(H \times D) \div (H - D)$$

That is, we divide the product by the difference. So continuing with the same lens, etc., we have

$$\begin{aligned} (18\frac{3}{4} \times 5) \div (18\frac{3}{4} - 5) \\ = 93\frac{3}{4} \div 13\frac{3}{4} \\ = \frac{375}{4} \times \frac{4}{55} = 6 \text{ ft. } 9 \text{ in.} \end{aligned}$$

We find that in this case if we set the scale at 5 ft. everything will be sharp from 4 ft. to 6 ft. 9 in. There is always *some* latitude of this kind; and I think that a good many photographers are inclined to exaggerate the necessity for range-finders and other gadgets. They point triumphantly to the sharp definition they get; but others easily get the same results without the gadgets. Scientific and elaborate gun-laying is in some cases absolutely necessary, but it is no use on the grouse-moors, or amongst the rabbits.

Unless we are to miss a good many camera shots, we must learn to estimate distances quickly, and with sufficient accuracy to keep within the margin of safety that depth of focus gives us. We should bear in mind that the margin is greater *beyond* than *before*, and err (if at all) on the near side.

Suppose that in the example just worked out the object we wished to get sharp was actually exactly 5 ft. from the lens, but that we guessed it at 4 ft. and set the scale accordingly. I need not show the working all over again, but the depth of focus at 4 ft. is from 3 ft. 4 in. to 5 ft. 1 in., so that even with so great an error as one foot in five, no trouble results. As the distance estimated increased, the latitude would increase also.

I am emphasising this, because it does not seem to be realised how much

October 17th, 1934

depth of focus there is with short-focus lenses and moderate apertures, and these are just what so many of us use. When it comes to longer focal lengths and large apertures the case is different. I gave last week an example of a 10-in. lens at $f/4$. Suppose we focus *this* at 5 ft. Our depth of focus works out at from 4 ft. 11 in. to 5 ft. 1 in., and barely that. No latitude here! This is why we see studio heads with the eye sharp, and the tip of the nose and ear fuzzy. Fortunately we beginners need not fear such terrors.

The practical outcome of all this is that I advise every beginner who has a focussing camera to compile a

"depth-of-focus table." First work out the hyper-focal distance for each stop, as explained last week. Then from each such hyper-focal distance, work out the depth of focus for each of the distances marked on the focussing scale. You will then be able to see at a glance what latitude you have got in every case that can arise.

There are some cameras—but only very few—which have a depth-of-focus table attached. When set for a particular distance the indicator shows, by marks on either side of it, the depth of focus at various stops. There are naturally limits to what can be included, and the best plan is, as

suggested, to make a complete table on a small folding card.

When the focal length of the lens is given in centimetres and millimetres, two courses are open in making the calculations. The first is to convert the focal length into inches. The second, and better, way is to make the calculations in centimetres, and convert the distances finally obtained into feet and inches. A close approximation is sufficient.

The illustration has nothing to do with these notes, but has a bearing on something I wish to say next week, for which I shall require all the further illustration room available.

W. L. F. W.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

DEVELOPING TANKS.

SIR,—I have read with interest the letter of Mr. J. A. Stirling. I have had the same experience as he has—film sticking to the wrapper, and portions of the negative torn off. In my case the manufacturer's salesman informed me the developer had crystallised on the wrapper, and suggested a new wrapper, which I purchased; but after a few developments the same thing occurred again.

To cut a long story short—the fault lies in mishandling. If Mr. Stirling will carefully follow directions in the instruction book he will have no trouble. In the first place, he cannot roll his wrapper up too tight—the tighter the better.

The procedure I have found satisfactory is to roll apron and film up tightly, and, when removing from the box, slip a rubber band round, and see that the corrugated rubber edges are level. Avoid touching apron in case of buckling, and, when ready, lower into the tank *very slowly*, and when in the tank expel air by lifting up a few times under the surface of the developer.

If Mr. Stirling will do this he will have no more spoilt films, and better negatives than he would get in a dark-room.

The fault, I believe, is the apron not being kept in its true position, probably through not using a rubber band. The loose ends would fall, and the negative would come in contact with the apron in places. In its proper position the film could not possibly touch the apron.—Yours, etc.,

T. W. JONES.

SIR,—I have been a user of a Kodak developing tank as described by Mr. Stirling for over twenty-five years, and have developed hundreds of spools during that time, and have only had two instances of anything approaching what he describes. This was caused by the film being threaded *under* the empty bobbin in the camera instead of *over* when loading. It is also necessary to see that the apron is *quite dry* before loading in the film.—Yours, etc.,

F. J. WILDE.

SIR,—Referring to Mr. J. A. Stirling's letter and to the difficulty he finds in preventing the emulsion adhering to the apron.

There is obviously some error in Mr. Stirling's method of winding film and apron on to the spool, as at no point should the film come in contact with the apron.

The emulsion side of the film should face the inside of the apron, while the paper backing should be wound firmly in contact with the outside of the apron. The rubber edging of the apron (between which the film lies) will then prevent the emulsion making contact, and will also permit free access of the developer.

To ensure this, and to prevent any sagging of the film, slight but firm pressure should be maintained on the idle winder while winding on to the spool the film and apron.

Assuming the free end of the film has been fixed down to the backing paper, and the film and apron correctly attached to the spool, there is simply no possibility of the trouble mentioned recurring if this simple precaution is adopted.

Any surplus backing paper should be left wound and a small elastic band slipped over it to prevent slacking off.

Care should be observed in cleaning the apron to avoid buckling or denting, as these might come in contact with the emulsion and so prevent the developer acting on such parts.

I am, of course, referring to the Kodak roll-film developing tank.—Yours, etc.,

THOS. T. KERR.

THE MINIATURE CAMERA.

SIR,—As one who has failed to obtain satisfaction from a particular type of miniature photography, Mr. Maclean's letter interests me, especially his reference to negatives "capable of a high degree of enlargement," and I should welcome the views of other readers on this point.

Because I take a fair number of contact prints during the year I have never considered the use of a camera giving a smaller size than that popularly known as V.P.K., and, because I am unable to afford an expensive lens, I have had on trial at different times a number of instruments fitted with the cheaper $f/4.5$ anastigmats. The cameras, however, have been by well-known makers and I am forced to admit that the defining powers of the lenses in question have been most disappointing, any enlargement above postcard size bearing obvious testimony to the fact that the picture has been "boosted" up from a small negative.

Up to date I have not tried a fine-grain film, for the simple reason that the trouble appeared to be in the failure of the lens, in which case no amount of "fine-graining" would save the situation. I should be extremely interested in any similar experiences of your readers, and very grateful for any advice, either from readers or the trade.—Yours, etc.,

G. B. BURR.

SIR,—There may be others who, like myself, own a heavy reflex and also a miniature camera, and while hating the weight and bulk of the former, enjoy the ease and accuracy of "processing" (horrible word!) plates.

Conversely, while revelling in the lightness and small size of the latter, they detest the messiness, awkwardness, and general cussedness of films in the dark-room, the moods and finicky nature of aprons, and so on. To these I may recommend the following tip in dealing with small film rolls. I turn the length into a plate by pinning it on to a piece of wood a little wider than the film, with a drawing pin at each end. With corners rounded off this will just fit into a whole-plate dish diagonally. It can be developed, fixed and washed without handling.

I agree that the "perfect" camera ought to be able to take plates, but not that a reflex viewer is necessary in these days of range-finder focussing. Why are no British small hand cameras fitted with these excellent devices?—Yours, etc.,

H. S. GASKELL.

How I make my EXHIBITION PICTURES

No. CCLI.

Mr. E. W.
CHADWICK.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"WHEN I commenced photography some fifteen years ago, it was with the intention of making records of various places visited during holidays. Later on, I began to feel that there was more in it, and began to try to make pictures with a wider appeal. At first I was unsuccessful; but on joining the Leeds Camera Club I found out that pictorial photography was not so simple as I imagined. But with the help of the more advanced workers I gradually improved, and began to compete in open exhibitions and competitions.

"I have had a good many cameras, but the one I prefer for pictorial work is a $3\frac{1}{2} \times 2\frac{1}{2}$ Thornton-Pickard Reflex,

with a Cooke f/3.5 lens, and I generally carry a tripod.

"My preference is for open-air subjects, and if I come across what I consider a good thing I do not hesitate, if it is possible, to make two or three exposures upon it, as the ever-changing light can play strange tricks at times, and it generally happens that one of the exposures is decidedly better than the others. Nearly all my exposures during the last four years have been made upon Ilford S.G. panchromatic plates, using a K2 filter, as I find there are not many subjects in which a filter does not improve the final result.

"I prefer to work in the early morning or in the evening. Next to

exposure I consider development the most important, and always develop in accordance with the subject. For one of great contrast I use Azol or Rodinal; but the M.Q. developer is my standard, and I nearly always give each plate one minute in the developer to five minutes in water. By so doing I get a nicely graduated negative which will give a good print on chloro-bromide paper, or make a good lantern slide. I always develop in total darkness.

"For the final print I use chloro-bromide or bromide according to the type of subject; and it is always my aim to try to illustrate some of the many moods of nature. I have tried bromoil, but I have not yet been able to master this process as I would wish. However, I intend to keep on until I do, as I consider this process to be the best means of expression in photography. Although I am no purist, I dislike to see a print that is not 'clean.' Personally, I prefer to work on the negative, using Farmer's reducer for local reduction, and Coccine dye for holding back any particular part.

"I think the best thing of all in photography is the lantern slide, and I have spent hours endeavouring to produce what I consider good slides. I use the plates now known as the Ilford Warm Tone, and I adopt James Shaw's formula for developing, always trying to make a slide that has as wide a range of tone as possible.

"I have found that the path of a would-be pictorialist is not easy, but I am always trying to produce something that is better than what I have done before. With this thought in my mind I go out looking for the masterpiece which never comes; but after all, one must remember that once one becomes satisfied the interest is sure to wane."

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

THERE is something of originality and freshness of outlook in No. 1 of the prints reproduced on the opposite page—"Fame and Glory," by F. M. Stanley—but, nevertheless, its appeal is appreciably diminished by the departure of the top of the monument from the true vertical. These qualities, therefore, are not conveyed as well as they might be.

Small Things and Large.

The fault is a small thing, no doubt, but its effect on the print is just the reverse. It is one which is so easily corrected that it gives rise to the suggestion that, instead of being intentional, the effort was accidental and more or less haphazard.

The quality of originality, which should be one of the features of the work is, in effect, replaced by that of ineptitude. Decision is lacking, and, in consequence, the work does not betray the sureness of touch that might be expected if intention were accompanied by accuracy in execution. If the print were trimmed so as to show the monument as a true vertical, decisiveness would follow, and the suggestion of novelty would take its proper place in the scheme.

It would then serve the purpose of enhancing the pictorial motive which lies in the beautifully clouded sky. That effect has been very well seen, and the suggestion of originality arising from the unusual viewpoint—sought but scarcely realised—should have conferred a value that a more ordinary impression could not have achieved.

The Virtue of Decision.

No. 2, "Evening," by G. L. Mallett, is something of a contrast. Here, there is no lack of decision, and, if there is no departure from the normal point of view, the picture, in its class, is so well carried out that anything of the sort is quite unnecessary.

The spot of light in the top left-hand corner is a bit unfortunate, and, if its author is equal to spotting it out without the alteration becoming apparent it might as well be removed. In other respects the subject is exceedingly well handled, and, while

there may be a suggestion of "posing" about the figure, it scarcely impairs the quite considerable attraction the work exhibits.

Nos. 7 and 8, "Idle Moments," by Norman S. Shaw, and "Still Waters," by J. Dykins, also show the inclusion of a human interest; but, in these two cases, their authors have been more ambitious, and two figures are dealt with instead of one.

It naturally follows that the difficulties of handling them are intensified. In fact, the inclusion of a second figure more than doubles the amount of trouble it is necessary to take where only one is dealt with. It is not easy to catch one in a satisfactory pose, but to secure it with two, at the same instant of time, and get a good grouping as well, takes a good deal of effort, to say nothing of an element of luck.

Possibly No. 7 is the more successful of the two, though the author has contented himself with a back view, for the group appeals as a whole, and the left-hand figure has just sufficient extra pull to give him principality. The effect of sunshine, too, is nicely suggested, and not only does the work score over No. 8 in this respect, but it also displays a greater degree of unity.

Division of Unity.

In No. 7 the group attracts as a whole, but in No. 8 there is a division of interest arising from the fact that the figures are placed on opposite sides of the print; their attraction is about equal, and neither can claim any superiority over the other.

The one pulls against the other, whereas, in the case of No. 7, the pull of the two figures was united. If two figures be included, and happen to be placed one on each side of the print, one must show a preponderating degree of importance, the other being relegated to serving in the capacity of a balancing but subsidiary accent. If not, there is no means of avoiding a conflict of interest; but, where the two are placed in close proximity, the same conflict does not arise as long as there is just the slightest difference between them. Reference to the prints themselves will make the distinction clear; and, with regard to the feeling of sunshine, this suffers in

comparison, it is true, but, all the same, it is nicely rendered, and it is only because the effect is more concentrated in the other that it gets across so much better.

Shadows and Sunshine.

With the exception of the figures, almost the whole of No. 7 is either in shadow or in a low tone, and, because the presence of shadows makes the sunlight evident, it tells better than in the latter, where the figures are neither so isolated in tone, where the shadows are decidedly in the minority, and where the arrangement, owing to the division of interest, is not so coherent.

It is the foreground shadow, too, in the case of No. 5, "Sunshine," by S. J. Vella, that warrants the choice of such a title. Without that shadow, there would be evidence of sunlight, but, because it would be all over the picture, it could not rank as an effect, and, pictorially, it would be valueless.

The same obtains with No. 6, "The Abbey Gate," by T. W. Collins. The shadowed foreground makes the sunshine on the building apparent, and, were the brighter tone of the sky omitted, it would convey the effect quite as well as No. 5. The inclusion of the sky introduces a note of competition between the two lights.

Relative Values.

With such an arrangement of the subject, it is difficult to suggest an effect of sunshine. It does occasionally happen, in certain lighting conditions, that buildings in sunlight seem to be actually brighter than the sky. If they can be so rendered, the sunshine effect would be retained, but the rendering of the relative values is not easy photographically, because of the preponderating sensitiveness of the ordinary plate or film to blue and ultra-violet light.

The difficulty can be overcome by the use of suitably screened panchromatic emulsions, and, in similar cases, they may well be tried. They would at least be a help, also, in subjects like Nos. 3 and 4, "Bolton Abbey," by N. Wilkinson, and "Sunshine and Shade," by Miss M. M. Bailey, where the skies, again, are rather too assertive. "MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"HELPING HANDS," by S. J. Kharegat.

REFERENCE was made overleaf to the difficulty of arranging a composition when more than one figure was dealt with. Two, it was stated, increased the task quite disproportionately, and, when the number is still further added to, it can be imagined how rarely it is that a successful grouping is obtained.

Good Grouping.

Nevertheless, it sometimes happens that when a number of figures are engaged upon a task which absorbs all their energies, and the photographer is sufficiently wary to avoid attracting their attention, a good grouping can be secured, and something of the sort seems to have occurred in this instance.

At the same time, it must be admitted that it is no easy matter to get such a result, for the choice of the right moment for the exposure must be very accurately foreseen and no less promptly seized, or the opportunity, rare as it is, will be gone for ever. Here, there has been no mistake, and a very happy grouping has resulted. The figures are instinct with life and action; the impression is spontaneous and free from the slightest suggestion of camera consciousness; the formation of the group, from the compositional standpoint, is excellent; and the sunshine on the figures lends the attraction of its beautifying influence.

The order in which the figures are seen, from left to right, determines their order of precedence. The one on the extreme left (1) is obviously the most important. His significance is stressed by his proximity; by his position in the picture space; by the fact that, in his outline, are contained the greatest extremes of tone; and it is further enhanced by his obvious leadership in the action that is taking place.

Cohesion and Dominance.

These factors all contribute towards

his dominance, and, as the main attraction centres in his figure, and the subsidiary appeal in the group of which he forms an element, the first essential in the arrangement of the composition is established.

It is, however, necessary that, in the interest of the composition as a whole, the group itself should be

The formation in question, like a pyramid in actual fact, conveys an impression of strength and firmness. It stands fixed and immovable upon its base, and, apart from anything else, would be sufficient to ensure that sense of order which it is the function of the arrangement to provide.

In the recession of the figures, too, there is the attraction exercised by a feeling of repetition, and, altogether, the composition is remarkably successful; particularly so, having regard to its nature and the difficulties attendant upon getting so many figures satisfactorily posed at the same time.

As for the pictorial effect of sunlight, it is well suggested; but, nevertheless, it is open to question if its brilliance is as well conveyed as it might have been if a somewhat lighter key had been adopted.

Key and the Subject.

The tones of the print, it is true, are very full and rich, and this richness no doubt owes something of its quality to the sombreness of the key; but, at the same time, the no less valuable quality of brilliance is necessarily impaired, and it occurs to one to wonder if a better compromise could not be found.

A slightly greater contrast in the negative, or the choice of a printing paper of somewhat greater vigour, might be expected to confer a greater brightness without any appreciable loss of richness in the darker portions, and, if another print be made, it would be as well to experiment along these lines.

In other respects, the work is wholly admirable, and, as far as the arrangement of the group is concerned, may be regarded as an exceptional achievement and an excellent example of a well-judged choice of the psychological moment for making the exposure.

"MENTOR."

coherent and display a satisfactory formation.

The proximity of the various figures to one another, to a large extent, provides the needful sense of cohesion, and, concerning the form, it approximates to what is known as a pyramidal construction, the two sides of which are furnished by the left-hand side of the figure (1) and, on the right, by the sense of direction imparted by the line of the pole, the base being formed by a line drawn through the several pairs of feet to the point where the pole goes under the bow of the boat.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Professional Assistance "ACTINOGRAPHIST."

The serious cinematographer should miss no opportunity of improving projection methods and the quality of his output. This article shows just how far his endeavours can be assisted as a result of paying occasional visits to the professional cinema.

A CONSIDERABLE amount of matter concerning empty gossip and other smaller trifles of the professional film is published day by day and week by week with surprising regularity. And this, it may be agreed, is regrettable—if only for the reason that the cause of cinematography could be better served by discussing those other aspects of the film which appeal more strongly to ordinary people.

Amateur cinematographers may themselves object to such matter on the grounds that it entirely ignores the true accomplishments of their professional colleagues, and so does nothing to indicate what films can and what films cannot show them how to improve the quality of their own output. One of these days, there may be an adequate supply of professional critics able to discuss pictures from a cinematic point of view, able to regard the film as an achievement of purpose and not as a mere framework for supporting a trashy story, an outrageously-boosted cast, a few irritating tunes and the usual etceteras—including (should the critic pride himself on his knowledge of "technique") a chance to praise some pretty photography! Until this comes about, serious amateurs must continue to visit the professional cinemas and to study these neglected points of direction and assembly for themselves; for although we may be contemptuous of contemporary gossip we can have nothing but admiration for the purposeful efforts of responsible film-makers.

At the Cinema.

One of the first things to observe on entering any well-managed professional cinema is the amount of effort expended in making its visitors comfortable. This may seem only a minor matter—indeed, compared with the heavier duties of direction, it may be; nevertheless, it is an important concern from the point of view of the enthusiast who does not want

his guests to fidget uncomfortably during the presentation of his own productions.

Another important detail to observe is the manner in which the pictures are projected. It will be noticed that the showing of a six- or eight-reel subject is accompanied by no appreciable breaks to mark the switching over from one projector to the other. This may be in direct contrast to existing amateur shows—where, even though two projectors be available, there are still occasional slight interruptions and overlapping during the changes.

It may also be noticed that the pictures comprising the programmes are arranged for showing in a manner well calculated to preserve pleasing balance. A couple of medium-length

pictures may come first, then the main feature of the evening, and, finally, another film of medium footage to complete the composition. Even the "continuous programme" theatres preserve this composition by providing a break or interval at the conclusion of each full showing.

Another valuable hint that may be gleaned from the presentation of "silent" features—alas! all too rare in the modern programme—which are accompanied by a musical background. This concerns the manner in which selected musical accompaniments are made to strengthen and even to create film atmosphere.

Attention should also be directed to the clever use of *cadenza* in facilitating the change from one selection to another using a different key.

Here is a good topical ciné subject easy to come across at this time of year. The figure imparts human interest, and the drifting smoke gives the subject a certain pictorial appeal.

With regard to the films themselves, only a few here and there may be found to hold any inspiration or guidance for the serious cinematographer. But even that few should be regarded as sufficient to make all his visits to the cinema worth while.

The matter which must always be regarded as most important is the manner in which episodes and even whole stories are conveyed. It is, for example, no very ambitious treatment which is satisfied to have the characters parade every piece of their action—step by step, as on the legitimate stage—before the camera. It is even less ambitious to inflict further explanation in the form of a talkie accompaniment that leaves little, if any, room for cinematic direction.

The vast possibilities of good direction can, for this reason, be better appreciated in the silent productions and in those audible films which have

a "sound" basis as distinct from a "talkie" basis. What we must look for are cinematic devices—devices which convey what has to be conveyed effectively, and in a manner which permits the camera to be used with skill and vision. The close-up is one such device; the moving camera is another; whilst such things as dissolves, animated titles (not, of course, puerile cartoons), composite shots and film symbols are amongst the many smaller devices which, used intelligently, make all the difference between cinematography and mere "movie" snapshotting.

Continuity is another bugbear to no small number of amateurs, and here again the best class of professional director can afford much guidance to the amateur enthusiast. Amongst directors worthy of our attention I include Arthur Elton, Andrew Buchanan, Basil Wright and Walt

Disney. Not all of them are well known, for the reason that they confine their attentions to medium-footage films as distinct from glamorous, "all-star" movies; and, of course, such brilliant directors as Eisenstein and l'Herbier cannot be cited as models until cinema executives begin to rent their films.

Finally, I must say a word or two about photography as such. More than one astute director has commenced his work by engaging a camera-man with an eye for composition and effects. The efforts of such cameramen—which include F. A. Wagner, Tisse, Gunther Kramp and George Noble—may still be seen at the professional cinemas, and after we have considered the major matter of direction we may well ponder whether our own photography would not be the better for a little well-disposed inspiration of this kind.

The Week's Meetings

Wednesday, October 17th.

Birkenhead P.A. "Over the Sea to Skye." W. Wilson.
Birmingham P.S. (Ciné Section). Amateur Films lent by the I.A.C.
Camberwell C.C. Practical Studio Night.
Coventry P.C. Folio Discussion Evening.
Croydon C.C. "Pictorial Composition." D. C. Rowlett.
Dennistoun A.P.A. S.P.F. Portfolio.
G.E. Mechanics Inst. P.S. "Cameras and Lenses." H. W. Bennett.
Ilford P.S. "Night Photography." R. H. Lawton.
Northallerton and D.P.S. "After-treatment of Negatives." R. Robinson.
Partick C.C. "Bird Photography." Robt. McLeod.
St. George Co-op. C.C. Toning Gaslight and Bromide Prints. D. Macvarish.
South London P.S. Ciné Group Meeting. "With a Camera in India." W. J. Lamb.
South Suburban and C.P.S. "Press Button B." G. H. Dannatt.
Worcestershire C.C. "Cotswold Scenery and Architecture." W. Wilson.

Thursday, October 18th.

Accrington C.C. "Correct Development by the Azol Method." G. Norton.
Ashton-under-Lyne P.S. The Chloro-Bromide Process. T. C. Egan.
Hammersmith H.H.P.S. "London River." W. E. Carrington.
Hull P.S. "Portraiture." R. E. Booth.
Isle of Wight C.C. Print Competition.
Keighley and D.P.A. "Land of the Moors." J. C. North.
Loughborough P.S. Ciné Exhibition by Kodak Ltd.
Manchester A.P.S. "A Tale of Three Cities." John Armitage.
Newcastle and Dist. A.C.A. Film by A. D. Hobson.
N. Middlesex P.S. "English Mediaeval Architecture." H. W. Fincham.
Richmond C.C. "London's Historic Mile." A. H. Blake.
Singer C.C. Exposure and Development. J. Wrigley.
Stourbridge Inst. P.S. Competition.
Wimbledon C.C. "John Constable, R.A." E. W. Harvey Piper.
Woolwich P.S. "Rambles in East Anglia." H. Pickwell.

Friday, October 19th.

Harrogate P.S. "With a Camera in Venice and the Dolomites." Dr. R. S. Illingworth.
Hinckley and D.P.S. "Walking in Switzerland." A. E. L. Vial.
King's Heath P.S. "High Barbary." Miss E. L. Shirley-Smith.
Leigh Lit. Society P.S. "A Night with the Lantern." G. A. Forman.
Manchester A.P.S. "Life and Colour in a Public Park." G. B. Kearey.
Photomicrographic Society. "Further Ciné-Kodak Films." J. H. Pledge.
St. Helens C.C. Enlarging. J. Gorse.
Southend-on-Sea and D.P.S. "Architectural and Engineering Photography." H. W. Bennett.
Wimbledon Ciné Club. Programme of Films by Doncaster A.F.S.

Sunday, October 21st.

Todmorden P.S. "The Rhine." F. Greenwood.

Monday, October 22nd.

Ashington and Hirst P.C. "The Story of the English Church." J. Oliver.
Bexley Heath P.S. Hints and Wrinkles.
City of London and C.P.S. Enlarging. A. C. Mundy.
Derby P.S. M.C.P.F. Portfolio and Slides.
Erdington and D.P.S. Lantern Slide Postal Club Slides.
Ipswich and D.P.S. Flashlight Photography. F. G. Fenner.
Kingston-upon-Thames and D.P.S. "The Photography of Wild Life." J. E. Roberts.

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Monday, October 22nd (cont'd.).

Kidderminster and D.P.S. Control. Bertram Sinkinson.
Leeds C.C. "Romantic Italy." Alex. Keighley.
Leeds University P.S. "Through England by Caravan." T. E. Green.
London County Council Staff C.C. "Some Problems of the Printing Process." J. A. Hall.
Newcastle (Staffs) and D.C.C. Monthly Competition.
Oxford P.S. Demonstration by W. Trevor Jones.
Plymouth Inst. P.S. "Making the Exhibition Print." S. Bridgen.
St. Helens C.C. "Still Life by Artificial Light." H. Kitchen.
Sheffield and H.P.S. "Cliff, Cove and Cavern." C. R. Podmore.
South London P.S. Chloro-Bromide Paper. R. S. Beck.
Southport P.S. Demonstrations.
Wallasey A.P.S. "The Charm of the Village Church." F. G. Emler.
Walsall P.S. Alliance Slides.
Walthamstow and D.P.S. "Entrances and Exits." T. D. Nunn.

Tuesday, October 23rd.

Bedford C.C. "The Lantern Slide." J. H. Gray.
Birmingham P.S. "Bruges, City of the Seven Wonders." J. E. Hall.
Bridge of Allan and D.P.S. "After-treatment of Negatives." Johnson & Sons, Ltd.
Cambridge P.C. Lecture by E. J. Bedford.
Exeter C.C. Criticism of Members' Prints. S. Bridgen.
Harrow C.C. Monthly Competition.
Kilburn and Willesden P.S. Development Methods. A. E. Avent.
Leeds P.S. Work Night. Enlarging by Members.
Manchester A.P.S. Exhibition Slides.
Manchester P.S. "Stereo Photography with a Single Camera." J. W. Pickering.
Monklands P.S. S.P.F. Portfolio.
Morecambe, Heysham and D.P.S. Hints and Tips for Beginners.
Newcastle and Tyneside P.S. Lecture by Robert Chalmers.
Northants N.H.P.S. "Finishing, Working-up and Mounting Prints." Miss F. Fleming.
Peterborough P.S. E.A.F. Travelling Exhibition.
Royal P.S. "Light Standards, Ancient and Modern." J. W. T. Walsh.
Rugby and D.P.S. "The Camera and How to Use it." F. Hine.
St. Bride P.S. Members' Lecturettes.
Sheffield P.S. Members' Contact Print Competition.
South Glasgow C.C. Debate: "That Photography is a satisfactory means of Artistic Expression."
South Shields P.S. Slide-Making. J. N. Lilley.
Stafford P.S. Slide-Making. W. A. Watson.

Wednesday, October 24th.

Birkenhead P.A. "Confessions of a Bungler." J. Anglesey.
Camberwell C.C. Members' Lecturette Evening.
Coventry P.C. "A Talk on Pictorial Composition." Walden Hammond.
Croydon C.C. "A 16-mm. Flicker Evening." Archie Handford.
Dennistoun A.P.A. Perfect Developing. D. Phin.
G.E. Mechanics Inst. P.S. After-treatment of the Negative. Johnson & Sons, Ltd.
Ealing P.S. Competition and Criticism.
Ilford P.S. "Shanks in Essex." E. J. Mason.
Partick C.C. Retouching. W. W. Weir.
Shropshire C.C. "Exhibition Photography." J. H. Trace.
South London P.S. Ciné Group. "Photographic Make-up." J. Redon.
South Suburban and C.P.S. "A Holiday in Shropshire." E. R. Bull.
Whitehall Ciné Society. "Spicer-Dufay Colour Film." Geo. H. Sewell.
Worcestershire C.C. Members' Evening.

Archway Photography

By L. BURDEKIN.

THERE can be few better settings for a photograph than that of an archway, for this provides a natural framework, and also gives interest to the foreground. It is one of the most attractive phases of exterior architectural work, and can be attempted with almost any type of camera.

An old cathedral town affords splendid scope for this subject, for here we can generally find all types of arches and gateways.

At the same time that we are studying buildings from the photographer's point of view, we can add also to our knowledge of architecture, and through this learn something more of the history of our race. Throughout the ages great men have tried to record their highest ideals in buildings that should be worthy of handing down to posterity.

In photography of this kind it is advisable to use a tripod, in order to allow the lens to be stopped down to secure detail, and an increased exposure given. It also enables the camera to be kept level. Moreover, by this means we can keep the camera trained on the subject while we watch for the moment for exposure.

Canterbury.

A flat front lighting will not show the modelling of the carving; plenty of light and shade is needed to get the full beauty of carved stonework. In the morning photographs should be taken of the south and west parts of the building, in the afternoon of the south and east, as this illumination will give the best results.

When doorways have to be taken into consideration we should try to choose a time when the door is open; a closed door gives a very uninteresting and flat appearance. On the other hand, when photographing an arch, we should avoid having too much detail in the background, if we do not want the interest to be taken away from the archway itself.

As our concern will be mostly with stationary objects, the speed of the lens need not be great. A stop of $f/8$ and a speed of $1/25$ th second will be the highest we shall require, but occasionally a smaller stop and exposures up to one second will be necessary if the subject is dark. A panchromatic plate and filter will frequently give much better tonal rendering of old stonework, but if a film camera is used one of the 'chrome films is very good for the purpose. In any case, keep the back of the camera level and vertical to avoid distorted lines in the photograph.

When, as is often the case, there is a brightly lighted vista seen through the archway, the subject will generally be one that must be classed as of "great contrast." The best way to deal with such a subject is to follow the old maxim of exposing for the dark part of the subject, and cutting down the time of development to avoid clogging and over-density of the bright parts. The dodge of partly "developing" in plain water may also come in useful.

Canterbury Cathedral.

The Amateur Photographer & Cinematographer

CLOSING DATE
Wednesday, October 31
1934

ANNUAL Lantern-Slide Competition 1934

the awards are made to individual slides and not to sets; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of "A.P." Prize Slides should hasten to do so, and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Wednesday, October 31st.

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in "The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in "The A.P." prize set which circulates throughout the British Isles, can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that

Classes and Subjects.

- CLASS I.—Landscape with or without figures, sea subjects and river scenery.
CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.
CLASS III.—Architecture, interior and exterior.
CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

- CLASS V.—Natural History subjects.
CLASS VI.—Lantern slides in colour (not hand-coloured).
CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

(1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{2} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.

(2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.

(3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.

(4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.

(5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of

the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.

(6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.

(7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.

(8) The last day for receiving is Wednesday, October 31st. The slides must be well packed and addressed, "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.

(9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Westminster Photographic Exchange, Ltd., of Camera House, 119, Victoria Street, S.W.1, have just issued their "Westminster Annual of Photographic Accessories." This is a book of two hundred pages crammed full of attractive matter for the amateur photographer. It does not pretend to list the well-known cameras, lenses and major apparatus of the photographer, but deals essentially with everything that can be described as accessories and materials. Cases, shutters, view-finders, filters, meters, roll-holders, tripods, safelights, dishes, measures, racks, retouching desks, albums, dark-room clocks, tanks, printing frames, mounts, illuminants, developers, printing papers—in fact, the hundred and one items that every keen amateur photographer possesses or would like to possess. It will prove a most fascinating volume for every reader of this paper, and is singularly complete in that in addition to full particulars of the accessories they are in most cases fully illustrated. As a reference book alone it is worth having and keeping for frequent consultation. All readers should apply for this Annual, which will be forwarded post free on application to the above address.

Mr. Desmond Sheen, of 32, Brighton Road, Sutton, Surrey, is anxious to form a cinematograph society in the neighbourhood. Will any reader interested in this suggestion please communicate with him? He needs the help of several cinematographers to organise the club, which he suggests should have both a film-making and a social side.

We are asked to warn photographic dealers and others against a man who is going about the country victimising them. His usual procedure is to borrow ciné films—"supers" for preference—ostensibly for someone in the town. When the address he gives is rung up later nothing is known of the man, who has then disappeared with his booty. He also offers films for sale. He is described thus: About 5 ft. 10 in.; brown hair; trench coat and plus-fours; no hat; talks very slowly and deliberately.

Messrs. J. H. Dallmeyer, Ltd., 31, Mortimer Street, Oxford Street, London, W.1, have a fine catalogue of photographic and cinematograph apparatus and lenses that should be in the hands of every photographer. It gives the fullest information, including prices, of all these productions, and is beautifully illustrated. The same firm offers the fourth edition of their booklet, "Why a Telephoto Lens?" which is not only a special catalogue, but a valuable treatise on this interesting field of work. We cordially commend both to the attention of our readers.

A specially interesting series of lectures has been arranged at the Royal Institution of Great Britain, 21, Albemarle Street, London, W.1, on Tuesdays, October 30th, November 6th and 13th, at 5.15 p.m. The lecturer is Mr. Olaf Bloch, head of the research laboratory of Messrs. Ilford, Ltd., and his subjects come under the general head of "Progress and Problems in Photography." Synopses of the lectures indicate their outstanding value and interest. Admission to this group of lectures is 7s. 6d., or 3s. for a single lecture, while for a guinea a ticket can be obtained that will cover all the lectures to be delivered before Christmas. Members of the Institution are admitted free.

The South London Group of the Kodak Fellowship has arranged an outing to Penhurst (with a peep at Chiddingstone and Hever) for Sunday, October 21st. A motor coach will leave Charing Cross at 1 p.m., returning by about 8.30 p.m. The coach fare is 3s. 3d. Further details can be obtained from Kodak Fellowship, 401, New Cross Road, S.E.14. (Telephone, New Cross 1903.)

The Traveller's Pocket Reference Note Book is a publication that every amateur photographer who travels should possess. It is issued as a supplement to the "XXth Century Health and Pleasure Resorts," and covers the whole of Europe. It includes useful matter regarding sports, sights, hotels and schools, etc., advice on travelling by road, rail and steamship, and a mass of useful information not usually to be found in any other one volume. It is issued in handy pocket form and is published by Anglo-Continental and International Publishing Offices, Ltd., of Lausanne. The address of the English office to which applications should be made in connection with the books is Warwick Chambers, Corporation Street, Birmingham.

The Isle of Man Photographic Competition organised by the I.O.M. Publicity Board has proved very successful, and attracted entries from all parts of the United Kingdom. £250 were offered in cash prizes in five classes, and the prints had to be of pictorial subjects taken in the Island by visitors during the 1934 season. The fact that over 5,000 photographs were submitted indicated that the Isle of Man was not only an attractive holiday centre, but also that it made a strong appeal to the amateur photographer. All the classes were well supported, and the standard of the work was high, both in respect to technical and pictorial merit. This was assisted by the rules, which made it compulsory for all prints to be in black-

and-white on glossy paper, and not exceeding whole-plate in size. The prize-winning prints therefore scored on straight photographic quality, and all concerned are to be congratulated.

The entry form for the thirtieth annual exhibition of the City of London and Cripplegate Photographic Society is now ready, and will be sent to any reader of *The Amateur Photographer* on application. The exhibition will again be held at the Cripplegate Institute, Golden Lane, E.C.1, and the last day for receiving entries is Monday, February 11th, 1935. There are two open classes and six members' classes. The Hon. Exhibition Secretary is J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.
—Entries, October 31. Rules in the issue of September 26.

Seventh International Photographic Salon of Japan.
—Osaka, October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

Victorian International Salon (Melbourne Centenary 1934).—Open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Open, October 17–20. Secretary, E. George Alderman, Ruardean, Newton Street, Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9e).

City of London and Cripplegate P.S. Annual Exhibition.—Closing date, February 11; open, March 11–16. Exhibition Secretary, J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Testing Lens.

I have bought a medium-priced anastigmat, and wish to test it by copying some printed matter. Can I reasonably expect hair-line sharpness at both the centre and edges at full aperture?
E. C. M. (St. Margarets.)

With a good anastigmat lens you should get satisfactory definition all over the plate at the same time. The test you name, however, is a somewhat severe one, and to get the best results it might be necessary to stop down the lens somewhat. It is largely a question of the degree of definition that you would consider satisfactory. In our experience several moderately-priced anastigmats stand the test quite well.

Infra-red Portrait.

I have attempted to take a portrait by infra-red, strongly heating two irons and pointing them at the sitter. Five minutes gave a blank negative. Will you tell me if the exposure was adequate?
R. L. H. (London.)

You are evidently unaware of the fact that to take a portrait by infra-red rays demands a very powerful light passed through an infra-red filter. We should advise you to get the necessary information on infra-red photography from Messrs. Ilford, Ltd., of Ilford, London, E., or to buy a textbook on the subject.

Silhouettes.

I wish to make some silhouette portraits by posing the sitters in front of a sheet. If a piece of magnesium ribbon is burned about five feet behind the sheet will the light be sufficient for an exposure of one second at $f/8$ or $f/11$?
D. J. M. (Surbiton.)

You will have to find out by experiment the exposure to give for your silhouette portraits. All that is required is to be able to get sufficient density for the part of the negative representing the sheet. What exactly do you mean by "a piece of magnesium ribbon"? Is it an inch, a yard, or what?

Curled Negatives.

Can you tell me how to prevent film negatives from curling?
G. McD. (Manchester.)

All roll films have a tendency to curl, in spite of the gelatine coating on the plain side, and, as far as we know, there is nothing that will prevent this. You do not say how you keep your negatives, but if they are put in envelopes in the usual way they will not curl unduly.

Making Enlarger.

I am wanting to make an enlarger; can you let me know of any books telling me how to do this? Will a Ross $5\frac{1}{2}$ -in. $f/4.5$ lens be suitable for the above?
S. E. C. (Belper.)

We have frequently pointed out that we know of no books in print with instructions how to make an enlarger. You overlook the fact that there are dozens of different types, some of which are quite beyond the capacity of any amateur to make. The lens you name would probably be satisfactory for any enlarger up to quarter-plate size, but more than this we cannot say. You say nothing about the size of negatives you intend to use, nor whether the enlarger is to be horizontal or vertical, with or without condenser, nor what light you propose to employ.

Spots on Films.

What is the cause of the black spots on the enclosed films? I have found the same spots on films developed by a professional firm.

A. M. M. (Hastings.)

Although we cannot say for certain we should think the trouble with your negatives is due to undissolved particles in the developer, but we are surprised to learn that anything of the sort has occurred with professionally developed films. We advise you to make up the developer according to instructions, and then to filter it before using it.

Gaslight Paper for Enlarging.

What is the objection to using gaslight paper instead of bromide paper for enlarging?

F. J. (Exmouth.)

The speed of the emulsion of a gaslight paper is too low for it to be suitable for the purpose.

Varnish from Films.

How can I prepare celluloid varnish from waste films?
A. T. (Birmingham.)

Clean the gelatine from both sides with hot water, shred the celluloid, put it in a bottle, and just cover with amyl acetate. When the celluloid has dissolved, thin down if necessary, and filter through a double thickness of muslin. It is used cold.

Telephoto Lens.

What is the telephoto type of lens that can be used on reflex and other cameras?

S. J. B. (London.)

It is a lens so constructed that with a short camera extension it will give an image about as large as that given by an ordinary lens of the same equivalent focus, which would require about double the extension. Thus a 12-in. ordinary lens set for distance would be about 12 inches from the plate; a 12-in. telephoto would give the same sized image at about 6 in. from the plate.

Wellington Developer.

Can you give me the Wellington M.Q. developer containing borax?
E. L. M. (Cambridge.)

We think this is what you want:

| | | | |
|-----------------|----|----|----------|
| Metol | .. | .. | 20 grs. |
| Hydroquinone | .. | .. | 20 grs. |
| Sodium sulphite | .. | .. | 200 grs. |
| Borax | .. | .. | 200 grs. |
| Water (hot) | .. | .. | 20 oz. |

Dissolve in the order named, and use neat at a temperature of 60° to 65° Fahr.

Using Bromide Solution.

How can I tell how much bromide solution to add to developers for various purposes?

J. C. B. (London.)

You simply follow the instructions given with the formula for the particular developer. To do this you must make up a solution of known strength. This is generally 1 oz. of potassium bromide dissolved in water to make a volume of 9 oz. 1 dr. Every 10 minims of this will contain one grain of bromide.

Copying.

I have been copying pictures, diagrams, etc., by daylight. What artificial light should I use, and where should the lamp be placed? What exposure should I give at $f/16$ on fine-grain plates?

H. G. (Nottingham.)

It is rather difficult to deal briefly with your question. You should use two lamps with equal power as nearly in front of the picture as you can get them without interfering with the line of sight. They should be screened so that no direct light from them reaches the lens. If you have only one lamp you should give half the exposure with it on one side and half with it on the other. It is useless to attempt to suggest exposure, as this must be found by actual experiment, and also depends on the character of the subject copied. There is some useful information on the point in the Burroughs Wellcome Diary.

OLYMPIA SHOW REVIEW

Special Number of

The Autocar

Dated Oct. 19th

The outstanding feature of this special number will be a unique survey of the Show by the technical staff in which all developments and improvements are analysed and explained, and the trend of design is discussed.

The Car and Coachwork exhibits at Olympia will be reviewed on a price basis, thus providing a practical and convenient guide to buyers of the new 1935 models.

PRICE 6d.

The Amateur's Emporium

Prepaid Advertisements.

SALE AND EXCHANGE: AMATEURS ONLY—

12 words or less 1/-
1d. for every additional word.

PROFESSIONAL AND TRADE—

12 words or less 2/6
2d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue. Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Box No. Advertisers

If a Box No. is required the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer." The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit. For transactions: up to £10 a deposit fee of 1/- is charged; over £10 and under £50, 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to **ILIFFE AND SONS LTD., and crossed**

Notes being untraceable if lost in transit should not be sent as remittances.

CAMERAS AND LENSES

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

REFLEX, T.-P. Junior ¼-pl., Cooke f/4.5, 12 slides, F.P.A., with adapter for 3½×2½, perfect order, with canvas case, £5.—Box 1821, c/o "The Amateur Photographer." [4099]

ANOTHER ASTOUNDING OFFER AT GAMAGES

A Complete 9.5-mm. CINÉ OUTFIT for ONLY £4:12:6

For this very small outlay you can have in your own home an entertainment that is unsurpassed by anything to-day. Imagine the joy of producing those "living" records of the kiddies, friends and a score of other subjects. Why not start taking and showing your own films? The apparatus is simple to use, and the risk of mistakes is practically nil. At this remarkably low price Gamages bring the thrills of film-making within the reach of all.

THE OUTFIT COMPRISES:

1. **CORONET 9.5-mm. CINÉ CAMERA**, fitted f/3.9 anastigmat lens, finest quality clock-work motor, taking 30-ft. film at one winding, and film footage indicator. Built-in view-finder and well made throughout.
2. **CORONET 9.5-mm. CINÉ PROJECTOR**, fitted resistance suitable A.C. or D.C., all voltages 200 to 250, complete with lamp. Gives a brilliantly illuminated 2-ft. picture at 15 ft. distance. Takes standard 30-ft. and 60-ft. Pathé reels.
3. **30×20 SILVER SCREEN** on rollers. Finest non-crease silver surface. London made.
4. **SOLID HIDE VELVET-LINED CASE** to take camera and 2 chargers. Complete with 2 straps, lock and key.
5. **TWO 30-ft. PATHÉ FILMS**, in chargers.

No Further Outlay Necessary.

THE NEW "CYLDON" 16-mm. CINÉ REEL AND HUMID CAN

PRICE

4/6
THE PAIR

Postage and packing 6d. extra.

THE REEL is rigidly constructed of stiff, specially hardened aluminium in the shape illustrated. The centre hole is cut square on each side and with keyway to fit all well-known 16-mm. projectors. The edges of the reel are finely polished and cannot scratch the film. The film when inserted is ingeniously held by two weak springs inside the usual slit in the centre core.

THE HUMID CAN is constructed in two parts of stiff tinned plate, the edges of which are spun over to prevent broken nails, etc. In the base is fitted the Humid Element protected by a neat, perforated metal disc. The lid fits quite snugly to the base.

We particularly emphasise the first-rate workmanship and quality of both the above articles.

Obtainable from all reputable cine dealers or direct by return of post from:

Granville

Photographic
Products

**—ARE GUARANTEED
FIRST QUALITY**

All Granville Papers and cards are subject to a strict process of testing before being offered for sale; every sheet being thoroughly examined before leaving our works. Granville Papers contain a high content of silver, and produce vivid sparkling prints. Speed, Latitude and Gradation are further characteristics which have made Granville Products so universally popular. Note the prices.

GRANVILLE DE LUXE PAPERS
Supplied in 20 grades. Single or Doubleweight.

... and you do *Best of All* at *Wallace Heaton's*

"FILMO" PROJECTORS at the NEW REDUCED PRICES!

"FILMO" J.S.

The finest amateur cine projector the world has yet produced. Has powerful 750-watt illumination giving pictures of theatre-like quality and brilliance. Entirely gear driven. Aero cooled and with every latest device that goes for absolute perfection in workmanship.

NOW £84

Nine monthly payments of £9 18s. 0d.

Come to Bond Street for a demonstration, or let us arrange to give one in your own home—these big reductions bring the world's finest projectors almost to the "popular price" level.

"Synchroflash"

A new permanently synchronised flashlamp for use with all makes of flash-bulbs or flash-powder. This revolutionary attachment can be instantly fitted to between-lens shutters, such as Compur, etc., and the T-P. roller-blind models.

Synchroflash is complete with its own battery and cannot possibly fail.

Indoor Snapshots at 1/25th or 1/50th second.

Get yours now and enjoy the long, dark evenings. Complete (standard model), for use with Compur shutter. **£11 10** (State size and model when ordering).

Junior model "for Everest" shutters..... 17s. 6d.
OBTAINABLE ONLY FROM WALLACE HEATON, LTD.

"FILMO" R.

A sturdily-built projector. Will give years of hard service. Has 750-watt illumination—the highest of any home cine. This model is specially suited for clubs, schoolrooms, and small halls. A demonstration will convince you of its high-quality performance.

NOW £60

Nine monthly payments of £7.

JOIN OUR CINÉ FILM LIBRARY!

In addition to our usual comprehensive range of films, we have added hundreds more titles exclusive to Wallace Heaton customers. It is now as cheap to hire them by post as to get them at our shop, as the period taken in post is deducted from cost. Send for details.

"MIRAX" ENLARGER (as illustrated)

For roll film or plate cameras. Made for use with sizes from 3½" x 2½" to 9" x 12" cm. Can be used horizontally or vertically. Gives splendid results when used in combination with f/4.5 lens.

From 57/6

"MIRAPHOT"

With automatic focussing, special Para reflector, Novar f/6.3 lens.

£7 : 12 : 6

Nine monthly payments of 17/10.

EVERY OTHER ENLARGER IN STOCK.

PATHÉSCOPE "200-B" PROJECTOR

With 290-watt lighting. Picture 16 ft. wide easily obtainable. Flickerless projection. Sprocket-fed. Threading one side only. Single nut tilting device. Works off any voltage. With lamp, plug, flex, adapter and one empty 200-ft. super reel. **£15**

Nine monthly payments of 35/-.

LEICA III WITH F/2.8 SUMMAR LENS

All automatic focussing. Quick as thought for getting unusual pictures. Gives perfect results all the year round. Its negatives make faultless enlargements.

Nine monthly payments of £9 3s. **£35 : 5 : 0**

WE HAVE OVER 120 DIFFERENT LEICA ACCESSORIES IN STOCK.

We can supply filters and film to take infra-red photographs with the Leica.

USED BARGAINS!

Show your Lantern Slides with an
Ensign OPTISCOPE
Ensign, Limited, High Holborn, London, W.C.1

Get your camera out to-night!

★ Inexpensive New Kodak Equipment makes

indoor picture-making at night easy.

Fast Kodak panchromatic films, extremely sensitive to artificial light, allow big reductions in exposure times. Handy, low-priced lighting aids provide brilliant, easily-controlled illumination in any room.

Fireside portraits, a bridge party, the kiddies at bath-time—new pictures in plenty—start making them to-night!

KODAK SUPER SENSITIVE PANCHROMATIC FILM.

Three times as fast as regular Kodak Film to artificial light.

"PANATOMIC" FILM.

Not quite so fast as "S.S. Pan," but still very much faster to artificial light than regular Kodak Film. Superfine grain.

THE NEW "PHOTOFLOOD" LAMP.

THE "KODAFLECTOR" JUNIOR.

THE "SASHALITE" OUTFIT.

NEW "PHOTOFLOOD" LAMP.

Plugs into ordinary electric light socket; gives intense, continuous light; one and half times as powerful as earlier type, yet reduced to nearly half the price. Lasts for approximately two hours continuous burning time, sufficient for an immense number of exposures. Safety fuse incorporated 4/-

"KODAFLECTOR" JUNIOR.

Reflector for "Photoflood"; increases effectiveness of illumination two and half times. Supplied with handy wire stand that can be stood on table, hung from wall, over chair, etc., in a dozen useful positions. Complete with 9 feet of flex, but without lamp 6/-

"SASHALITE" BULB.

The powderless successor to flashlight. Flash takes place in sealed glass bulb, fired by ordinary torch battery. No smoke, no smell, no danger. Each bulb gives one brilliant flash. Allows night-time indoor snapshots to be taken with any camera.

Per bulb, 10½d.

Complete Sashalite Outfit containing 2 Bulbs, Battery in Holder, and Metal-surfaced Collapsible Reflector 7/6

KODAK LIMITED, KODAK HOUSE, KINGSWAY, LONDON, W.C.2

CONTAX

MINIATURE CAMERA PERFECTION

TEN ZEISS LENSES

from extreme wide angle, $1\frac{1}{8}$ in., to Telephoto lens of $7\frac{1}{2}$ -in. focal length, and apertures from f/1.5 to f/8, are available for interchangeable use with the Contax. All these Zeiss lenses are specially constructed Contax lenses, and possess the maximum defining powers, an indispensable quality with lenses fitted to miniature cameras. The Contax here illustrated is fitted with Zeiss Sonnar f/2, the finest universal optical instrument known in miniature photography. The definition is perfect, the rapidity ample even for night photography, and the compact mounting of the lens does not necessitate a collapsible mount, so it is possible to claim for this combination an "ever-readiness" which cannot be present when lenses in so-called collapsible mounts are used.

Full particulars with our books, "The Connoisseur and the Contax," "The Ten Contax Lenses," and "Accessories for Contax Photography," will be sent free on request.

ZEISS IKON LTD.

Vol. LXXVIII. No. 2398.

NEXT week's issue of *The Amateur Photographer and Cinematographer* will be a special Lantern and Ciné Number. This is the time of year when amateurs of all types are turning their attention to various phases of photography that can be practised indoors. The production of lantern slides, their projection and the projection of ciné film are topical matters that are becoming more popular every winter, and make a very strong appeal to thousands of our readers. For this reason we are devoting the greater part of our next issue to these subjects, with the firm conviction that it will supply much useful information that will be appreciated. The number will be increased in size, and we advise all our readers to secure copies early. While on the subject of lantern slides, we would remind all those who are proposing to enter "The A.P." Annual Lantern-Slide Competition that the closing day is October 31st. Full particulars and conditions, etc., will be found on another page in this issue.

The Screen Plate.

The ingenuity expended over the colour screen plate was very effectively demonstrated by Mr. A. J. Bull in his presidential address from the chair of the Royal Photographic Society last week. What a procession of screen plates there has been, right away from Joly in 1895, the Thames, the Krayn, the Lumière, the Warner-Powrie, the Jougla Omnicolor, the Aurora, the Paget, the Agfa, the Finlay, down to the latest, the Spicer-Dufay. Mr. Bull spoke with admiration of the ingenuity displayed, but he concluded with the remark that on the theoretical side, as to what colours should be

TOPICS of the Week

AUTUMN IN THE PARK.

A London subject that offers many pictorial possibilities at the present time for the hand-camera worker.

photographed, and how the colours should be selected for reproduction purposes, there was still much work to be done, many gaps in knowledge still to be filled in. He showed by some conclusive experiments how different in nature were light and visual sensation, and since light of most parts of the spectrum, except red, stimulates two or three sensations simultaneously, colour sensation curves have no relation to the practical problems of colour photography. Great confusion has arisen, even among eminent authorities, as between curves representing the colour sensations in the eye and curves of the proportions of red, green and blue necessary to match the colours of the spectrum. The screen plate has some way still to go.

Close-up of Assassination.

The wonderful film of the assassination of the King of Yugoslavia makes it pertinent to ask again whether anybody is charged with the preservation of such historic records. One can measure the interest with which it will be regarded, if preserved, in a hundred years' time by the interest with which we should see the authentic film obtained on the "Victory" of the death of Nelson, or, from Whitehall, of Charles I on the scaffold. The assassination film is only a short length, but the impression of the tragic event which it gives, both in picture and sound, is extraordinarily vivid. What iron nerve must the photographer have possessed, not merely to disregard his own personal danger, but to keep a steady hand, to concentrate on his purpose, and even to remember his technique, obtaining a close-up at the proper moment of the face of the dying king! It is callous, but it is superb.

Heading Them Off.

One learned something of the "tricks of the trade" from Mr. G. E. Bell's engaging speech at the R.P.S. annual dinner. Mr. Bell gave an amusing account of a certain managing director of a photographic manufacturing firm upon whom one day a famous explorer called in a state of wrath. He produced a small camera and asked the director to look at it. Those were the days when small cameras were made partly of wood and partly of metal, and this one had proved unsatisfactory in a tropical climate. The director picked up the camera and said, "Well, the metal work is all right." "Yes," said the other, "but look at the wood—it is warped." "There you place me in a delicate position," said the director, "my firm made the metal work, but God Almighty made the wood!" Which Mr. Bell capped with a story from his own experience of an audience of Scottish dealers. A new camera was being introduced by his firm, but the factory was behindhand in turning it out, and orders were held up. "Is it good

business," said the Scottish heckler, "to advertise an article the dealers have not got to sell?" Mr. Bell's reply was, "Well, sir, as our English poet Milton says, 'The best-laid schemes of mice and men——'" He got no farther, for there was a yell of "Bu-r-r-rs," and in the excitement the truant cameras were entirely forgotten.

Toy Projectors and Inflammable Film.

The London County Council is drawing attention again to the dangers attaching to the use of inflammable cinematograph film in the home. The circumstance which has led to a reawakening of interest in this matter is an occurrence in Fulham recently, when the fire brigade was called to a house and found a fire in progress in a bedroom, where a youth had been using a toy projector mounted on a box on the top of a washstand, when the film ignited and set fire to the contents of the room. The youth was severely burned, and escaped by jumping from the window into the yard. The reel of film which was

being used was about 1,000 ft. in length and was completely destroyed. Several other lengths of film were found in a box underneath the bed, and 7,000 ft. of film was found in another room in the same house. It should be added that the London County Council (Celluloid) Act, 1915, regulates the quantities of cinematograph film exceeding 80 pounds in weight, if the film is kept for sale, hire or profit, but it does not restrict the amount which may be kept for private use, and although to sell film to children under sixteen is prohibited, there is no power to prevent its sale to adults. Hence the need for publicity as to possible dangers.

The New Stamps.

Welcome to the new stamps by the photogravure process! To use a word familiar in a photographic connection, they are more "plucky" than the old. The old "three-ha'pennies" by surface printing look very anæmic specimens by comparison. The new "pennies" are, however, too crimson for everybody's taste.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Warm-tone Developers.

I like to try a variety of warm-tone papers, particularly of the chloro-bromide type, and find it inconvenient to attempt to make up the solutions given in the instructions with the different papers. Can you suggest a developer, say M.Q., which would be likely to work well with them all? J. J. E. (Stafford.)

The only objection to the course you propose is this: There are several developers which will give satisfactory results on practically every chloro-bromide paper on the market; but it by no means follows that the result is the best that any given paper is capable of producing. Many papers have a definite colour and quality of image that can be secured to perfection only by the developers and methods given in the working instructions.

A suitable M.Q. developer for most warm-tone papers is:

| | |
|-------------------|-----------------|
| Metal | 60 grs. |
| Hydroquinone | 240 grs. |
| Sodium sulphite | 3½ oz. |
| Sodium carbonate | 3½ oz. |
| Potassium bromide | 250 to 700 grs. |
| Water to | 80 oz. |

The weights given for the sulphite and carbonate are for the crystal form. The amount of restrainer is not definite, and a great deal depends on how much you decide to use. The more you put in the slower will development be, and increased exposure and a warmer tone must result.

Although you mention an M.Q. developer we are inclined to think that a glycin formula may be more satisfactory for your purpose. A single-solution form is:

| | |
|-------------------|---------|
| Glycin | 1 oz. |
| Hydroquinone | 1 oz. |
| Sodium sulphite | 7 oz. |
| Sodium carbonate | 6½ oz. |
| Potassium bromide | 75 grs. |
| Water to | 80 oz. |

Messrs. Johnson supply a glycin preparation in powder form which can be made up as a stock solution, and further diluted for use. We have found this to work well with several well-known brands of paper.

The same firm recommended a two-solution developer which is prepared as follows:

| | |
|---------------------|---------|
| A. Sodium sulphite | 2 oz. |
| Sodium carbonate | 1 oz. |
| Glycin-Johnson's | 1 oz. |
| Water to | 20 oz. |
| B. Sodium carbonate | 4 oz. |
| Potassium bromide | 10 grs. |
| Water | 20 oz. |

For use take A one part, B one part, water two parts.

Whatever developer you use, the method of working is to discover the exposure that will give the right strength and contrast, and then to decide whether the actual colour of the image is what you require. If it is not warm enough you must further dilute and restrain the developer, and then again discover the exposure for the altered conditions. It is useless to alter exposure and development in a haphazard way in the hope of securing a satisfactory colour. It must be done systematically; and we think that glycin developer will give you as much latitude as any, especially if there is no objection to some variation in the resulting colour.

PICTORIAL EFFECTS *in Enlarging*

In the following article several practical hints and suggestions are given for adding to the pictorial effect when making enlargements from hard negatives that have much good detail but little tonal quality.

IN a recent issue of *The Amateur Photographer* a description was given of the method adopted for making a successful enlargement from a portion of a very harsh negative, by masking of the subject to give adequate exposure to a small portion only.

The method, while not new, is one that is not practised so frequently as it should be when dealing with a similar type of negative. Unless a negative is technically and pictorially perfect, and a straight enlargement only is desired, a certain amount of shading or masking is a perfectly legitimate procedure in printing to make the most of the subject. In fact, it can be regarded as far more legitimate than subsequent treatment of the finished print by means of pigments or other "dope" for assisting the tones of the subject.

Shading or masking the enlargement during exposure has many variations apart from the one described in the article referred to. In that case, it may be remembered, a small hole in a piece of opaque card was used to pass light and "force up" a certain part of the subject. By keeping this card in motion during the exposure, the action of the light was utilised to expose fully a small area of the subject while the remainder was held back.

Mobile Masking.

The reverse of this is equally easy of attainment; that is to say, a small portion of the subject which is thinner in the negative can be shielded while the remainder and denser portion is being fully exposed. To accomplish this a disc of dark card is fixed to the end of a long thin wire or pin (the old-fashioned hat-pin was ideal for the purpose, but we doubt whether these are now obtainable). It will be found when the image is projected on to the easel, and the piece of card is held

near to the lens, that a patch of shadow is cast on to the easel, while the image of the thin wire is practically invisible.

During exposure this small patch of shadow can be moved about or kept stationary, if necessary, to shield any particular portion that is likely to be overprinted. It can be manipulated in many ways by bringing it nearer to the bromide paper to sharpen the edges, or farther away to diffuse the shadow.

By a slight twist of the wire, the shadow of the cardboard disc can be altered until it is edge-on to the easel and is then practically invisible. In this way, either a large circular or a narrow oval-shaped shadow can be cast at will.

An alternative to the disc of cardboard is a plug of cotton-wool at the end of a wire. This can be pulled about to make any desired shape for the purpose of the mask, and has a diffused edge to start with.

The Most Effective Mask.

Perhaps the most efficient mask when a large patch needs to be shaded is the hand of the operator. The shadow cast by it on to the enlarging easel is entirely under control, and can be rendered of any size and in any degree of diffusion. It can be altered by flexing the fingers or turning the hand in any direction to fit almost any space on the enlarged image, and a very mobile outline can be projected that can be constantly altered to protect any desired part.

It is essential, however, when making these adjustments to the enlargement that the exposure itself should not be too short, or time will not permit of adequate masking. For this reason the lens should be stopped down to increase the exposure, or, if the light is very strong, a sheet of opal glass should be inserted between the light and the condenser if a condenser enlarger is used. Incidentally, this will diffuse the lighting

and add to the quality of the image.

While on this subject, the centring of the light itself can sometimes be turned to account, when, for instance, the negative is not of even density throughout. Many negatives, for some reason, have a patch of lighter tone in the centre, the edges being apparently much denser. This can be evened up by decentring the light of the enlarger, so that the edges are more brilliantly illuminated than the centre. This expedient, however, is an operation requiring some skill in adjustment.

Diffusion.

To introduce diffusion is also a legitimate form of print improvement when making an enlargement. The effect of bolting silk is of course well known, and various other diffusing media can be used for the same purpose, notably that which is known as "tulle." Pieces of black tulle stretched over a light frame made of cardboard should be kept ready for diffusing negatives as required. These frames can be covered with one, two, or three thicknesses of the material, the diffusion increasing according to the number of thicknesses. In this case the tulle is best used near the lens.

Yet another method of introducing diffusion, and one which gives a peculiar quality, is to interpose two or three sheets of plain glass between the lens and the projected image when making the exposure. If these pieces of glass are moved slightly and at an angle to the axes of the lens while the exposure is progressing, a slightly blurred effect is introduced without increasing the length of exposure or materially affecting the definite detail of the image. The effect in this case is more pleasing than that obtained by throwing the image slightly out of focus, although this has its merits when the image has much aggressive grain.

PICTURES *in the* KITCHEN

By
PAUL I. SMITH.

THE photographic possibilities of the kitchen have so far been unexplored, but pictures are await-

normal angle, and then climb on a chair or table and have another good look. A mental comparison of the two

scenes will, I think, convince you that everything depends upon the angle, and, of course, the lighting.

Daylight is ideal for this work, but it is usually so dull at this time of the year that supplementary lighting in the form of one or two 100-watt electric bulbs may be necessary.

Avoid hard shadows, unless you specially desire to intensify the interest, but get plenty of contrast in your prints and avoid flat, lifeless pictures, which never carry conviction,

Washing-up. Exposure 5 secs., f/8, Auto-Filter plate.

and certainly do not tell their stories as they should be told.

Panchromatic plates are excellent for the purpose, but a good ortho plate which embodies a special filter and has a speed of 450 H. and D. will be found quite serviceable, and this was the plate used by the author.

It is not usually practicable to stop down the lens more than f/8, as most people find it difficult to keep still in uncomfortable attitudes for more than several minutes' posing, and then a tense period of exposure, which may of course vary from five to fifteen seconds with plates of the speed mentioned, but with fast pan. plates or films much shorter exposures are possible.

An exposure meter is a real boon to the kitchen photographer, as it is very difficult to gauge accurately the exposures necessary for such widely different subjects as washing-up and scrubbing the floor. In one case the white porcelain sink and tiled surround reflect the light and tend to decrease the exposure, whilst down on the tiled floor the light is not very strong, and if any detail is to be obtained in the shadows a fairly lengthy exposure will be required.

As regards development, any good, well-balanced formula will do, but metol-hydroquinone is to be preferred, especially if used in the tank and the time and temperature method adopted.

A word of advice. Don't take your camera into the kitchen during the rush hours if you want the best results; you may easily ruin your plates . . . and the dinner.

On the Boil. Exposure 4 secs., f/8, Ilford Auto-Filter plate.

ing the camera in all kinds of odd but interesting places—at the sink, the cooker, and even on the floor.

Before taking your camera into the culinary department, seek permission to view the field of action and find out where the best pictures are to be found. At first it may appear that the kitchen is absolutely devoid of pictorial subjects, but the angle of view very often determines the appeal, and it is well to bear this in mind.

Examine your subject, say your wife or the maid washing-up, from the

Scrubbing the Floor. Exposure 15 secs., f/8, Auto-Filter plate.

Subjects for Bromoil

By
CHAS. MORRIS.

A VERY common mistake amongst beginners at the bromoil process is to use for early attempts subjects which would extend the skill of the most experienced worker, so that failure is inevitable. Delicate high-key tones and the deep gradations of heavy shadows are difficult to render by the process, but the rendering of half-tones is comparatively simple.

For this reason subjects chosen for first attempts at bromoil should be principally of half-tones, with the high-lights and shadows of small area not requiring gradation in themselves.

Contrasty subjects with brilliant high-light detail and deep shadows should be left until one feels that the process has been mastered, when it will be realised that ordinary bromide printing will provide the best print.

The illustration "Sunlit Corner" shows a subject which would be difficult in bromoil, especially as the trouble involved would hardly be justified.

The landscape "Hay Ricks and Trees" is obviously quite different. There are no high-light gradations to reproduce and no shadows within the shadows. A properly prepared bromoil print of this subject inks up easily. Moreover, the subject as it stands, although it has pictorial possibilities, is by no means satisfactory. The sky requires more tone, and the bare foreground modulation, while the small branches behind the hay-stacks are scraggy and irritating. These defects are easily remedied with the brush in the final part of the inking up.

It should be noted that it is unnecessary to attempt the introduction of clouds into the sky. This would require more skill than the average beginner possesses, and would in no way improve the picture. The pictorial requirements of the subject can be fulfilled merely by adding extra tone to the sky so that it darkens gradually

Hay Ricks and Trees.

Sunlit Corner.

towards the top. Irritating details may be removed or obscured with ease, but more than a little skill in draughtsmanship is necessary if it is desired to introduce details absent from the negative.

It may be useful to point out for the benefit of beginners in bromoil that the adding of a level tint of pigment to a blank space is only accomplished by a definite form of brush action. The largest available brush should be used and the pigment lightly but evenly distributed over its working surface by repeated dabbing on the palette. It is then applied to the print with a firm but gentle pressure only, not the usual dabbing action. This will deposit a level patch of tone that can be repeated all over the required space and levelled up by the same method.

MIST for

By A. L. BRIDGEN and
R. FERGUSON.

November Morning in the Park.

NOW is the season when mist enshrouds the land, the rivers and the coast at different hours of the day, particularly in the early mornings and late afternoons. These are the times when the portrayal of mist effects will be productive of many fine pictures that would not be possible at any other time of year.

Many subjects, which under ordinary lighting conditions would not be considered worthy of a plate or film, are transformed and made pictorial compositions of charm when seen through the mist.

Mist will convert a commonplace scene into one of mystery and beauty by hiding a lot of confusing and unnecessary detail. The masses are flattened out into level tones devoid of lines and spottiness, the distances are softened, and by comparison foreground objects take on greater strength.

For this reason, when taking pictures in mist a viewpoint should be chosen to give a composition with a strong foreground object.

How different the town and country look when seen in the early morning, when the sun is striving to break through. Notice how some things are emphasised, whilst others are softened, giving unusual opportunities to the picture-maker for getting some of those exhibition prints of which he has so often dreamed.

While mist occurs at all times of the year, the best mist photographs

Sunset of a Misty Day.

Out of the Mist.

will in no way resemble the delicate range of tones which prompted the attempt. As there is very little colour in either town or landscape when viewed through a haze, there is no need to use a colour filter, as this tends to cut out the mist; precisely what is not required.

It will be observed when photographing a landscape subject in mist that the planes of the picture recede in a remarkable manner, and the charm of mystery, which is such an aid to picture-making, will result under the mellowing influence of the atmospheric effect. Under these conditions, photographs of river and

EFFECTS

Picture - making

A TOPICAL SUBJECT for the
AMATEUR PHOTOGRAPHER.

marine views are very effective indeed, and if, in addition to haze, sunshine is in evidence many fine pictures may be obtained. Over-development should be avoided if the half-tones, which are such an important feature of this class of work, are to be correctly rendered.

Due care should be taken to see that the lens is kept dry when working under the above conditions,

The Pool of London in mist! A grey day on the River.

The Sun breaks through.

as the risk of moisture condensing is always present in cold and misty weather.

Practically any type of hand camera can be used for this form of autumn and winter work, but a tripod will prove a useful accessory at times.

A Misty Morning at the Station.

The Exhibition Print

SOME HINTS ON FINISH.

By ARNOLD T. BAILEY.

FOR portfolio and competition work many photographers prefer to submit an unmounted print. This enables a better idea of the relative exposure and development to be assessed, the print being viewed by transmitted light. When, however, the final print is made for exhibition it is imperative that it be suitably mounted. It is surprising how many good prints are marred by slipshod and thoughtless mounting, so these few words to the exhibition aspirant may prove useful.

I find it handy to have three "colours" of mount—white, pale cream, and cream. If the finished trimmed print be placed on the mounts in turn, the worker should be able to "feel" which is most suitable. There are no cast-iron rules, but a few hints may help the inexperienced.

For a sunny snow scene a pale cream paper is generally best. If a white mount is used this gives a yellow tinge to the snow. It will be found better to use a cream mount, which kills this yellowness yet retains the sunniness.

For a sunny landscape a cream paper

on pale cream, or a pale cream paper on a white mount, will be found effective in retaining the feeling of sunshine.

For portraiture generally I prefer paper and mount to tone—white on white, cream on cream.

For general work remember that a white print on a cream mount gives a feeling of coldness, whilst a cream print on a white mount gives maximum warmth.

If a narrow black border is desired on the print, it should be done *before* mounting. A quarter-inch ruling pen and waterproof indian ink is clean, quick and handy. I usually rule the border and trim the print afterwards so that I can make the black line any desired width.

Many workers find trouble in mounting. I do not see why this should be, especially when a good mountant like "Grip-fix" or Johnson's is used. In practice, after marking the position of the print on the mount with two minute pencil dots, I place the print on a sheet of paper and work from the centre outwards until it is evenly pasted.

A clean sheet of paper is used for each print. The print is then placed in position on the mount and pressed down from centre to edges with a clean rag. I then place a sheet of white paper over the print and leave under a few heavy books to dry.

A neat, pencilled border round the print looks well, and if the title or signature of the worker is to be added, this border should come well down at the foot of the print. With regard to titling, it is far better to scribe the title on the back of the mount than to print it badly on the front. Unless the titling is well done it is better left undone. In any case, in some exhibitions, titles are not allowed on the face of the mount.

If the title is to appear let it be small, neat, unobtrusive (in pencil not ink), let the style of lettering be correct, and avoid all fancy touches. It may seem inartistic, but the practice of attaching a typewritten title to the extreme bottom left corner of the mount has much to recommend it.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

CAMERA PRICES.

SIR,—While I am not going to pass any lengthy comments on the prices of cameras, especially miniatures, I just wish to say that I use an old quarter-plate reflex for short trips around about and a $3\frac{1}{4} \times 2\frac{1}{4}$ film Kodak for extended trips and holidays, etc., away from home, and I derive every satisfaction—cheaply—though I prefer plates every time, and I consider nothing can beat a quarter-plate or $3\frac{1}{4} \times 2\frac{1}{4}$ reflex for really good work. And a miniature I would *never* buy, as I think they are but a passing craze.

But, as for materials, I have been using Criterion plates, which are a reasonable price; for papers, I took the hint of one of your exhibition workers, and turned to Granville, who supplies bromide papers at a surprisingly low price. By their use I can do more photography, and at a much less cost, and Messrs. Illingworth make very fine "Commercial" post-cards at 3s. per 100. A $3\frac{1}{4} \times 2\frac{1}{4}$ film I consider is reasonable, eight for 1s.

I have no interest in any firm except that of a satisfied user.—Yours, etc.,
A. NATION.

D. AND P. WORK.

SIR,—I wonder if the following experience with seaside D. & P. services will be a warning to your readers to be careful. I may say that having dabbled in photography for at least thirty-five years, I know something about it. The last few years I have used a Leica and had perforce to send my films to specialists. This year I changed to a Super Ikonta, using standard 120 films, and was tempted to have my films developed at the seaside where I was staying. The first spool was badly marked and a new film given me with apologies. The second, at a different place, was completely ruined through faulty mixing of chemicals. Again a new film and such charming apologies that one had to forgive. I then went to the Channel Islands, where I had a large number, perhaps fifteen spools, developed. I always had them back in five hours, with nice bright contact prints. But, and here is the point, when at home I came to enlarge those negatives, there is hardly one that is not ruined by marking of some kind, finger prints, etc.

As a result, my holiday album will be chiefly miniature contact prints which I could have obtained with a 10s. camera. Now, I know that the chief trouble is the excessive speed demanded by the public, but if amateurs themselves were a bit more particular in what they accept I am sure the service would be better. On two occasions fellow-visitors asked me what was wrong with their cameras. In each case I found the negatives had been ruined by uneven development. When they complained they were given new films; but if everyone receiving faulty work complained, I am afraid many firms would go out of business. If the public want a five-hour service, and don't mind faulty work, let them have it; but I do suggest to all firms doing this kind of work that they should have an alternative slower and more carefully carried out service for those amateurs who take photography seriously. I am sure a large number would willingly pay a few pence more rather than have their winter enlarging work ruined.

Apologising for the length of this letter.—Yours, etc.,
"S-S."

SIR,—I have been a regular reader of your valuable paper for some considerable time, and I have followed with interest your page devoted to readers' letters to the Editor.

I feel I must make some defence in reply to L. M. Reeves' remarks about D. and P. methods. I have worked for a certain photographic chemist for the past six or seven years and during this time I have dealt with practically every possible photographic detail.

It is a strict rule of my employer, who is an A.R.P.S., that all work must be of the finest quality available, even if two or even three enlargements have to be made before a perfect specimen is obtained.

Our work is charged at the price set by Kodak Ltd., and no matter how long we spend over a job the price remains exactly the same.

I have absolutely no connection with this business except as a paid employee, but during the whole time I have been employed here our principle has been that only the best results are good enough for our customers.—Yours, etc.,
W. R. BICK.

LETTERS TO THE EDITOR (contd.).

DEVELOPING TANKS.

SIR,—I am interested in correspondence *re* developing tanks. Some years ago I purchased a second-hand Kodak roll-film tank and in it I have developed hundreds of films. Only recently had I any failures. The developer had failed to affect certain parts of the film.

I wrote the makers, enclosing results. They, very courteously, replied suggesting that my failure had been due to *not winding the apron tightly enough*. If this did not remedy the trouble they would examine the tank for me. I took their advice, wound the apron tighter, and since then I have not had a single failure.

I have nothing but praise for this type of tank, which has proved a great help to me. Trusting my experience may be of assistance to readers, and wishing you and your excellent journal success in its good work.—Yours, etc.,

LEONARD R. JENNINGS.

SIR,—If Mr. Longfield will try first filling the tank with the developer and then slowly lowering the spool with the film rolled on into the tank, I think he will find that no air-bells will be formed.

I have developed many roll films in a circular tank with apron by this method, and I have never once been troubled with air-bells.

When I first began to use a tank I found that some of the films were badly marked on the edges by the serrated apron, but I overcame this defect by unwinding the apron slightly after winding and setting.—Yours, etc.,

J. PARSONS (Barcelona).

SIR,—I have read with interest Mr. J. A. Stirling's letter regarding developing tanks. I do not know what kind of tank Mr. Stirling uses, but if it is a Correx tank, I may say that I had the same trouble when first using this tank. I at once complained to the sellers (who, by the way, use the Correx tank themselves), and I have been told that in order to avoid such trouble the film must be wound round the apron with the *emulsion facing upwards*, and after winding the film completely, and adapting the clip which is found at the end of the apron, the whole thing must be pushed back a bit by pressing gently with the finger away from the clip. This helps the film to get loose a bit, and dislocates it from the apron. Since adhering to this method, I may say that I have never had trouble, and have been very pleased with this tank. Up till now I have developed over twenty-five Contax films, and never had the slightest trouble.

Wishing "The A.P." all the best.—Yours, etc.,

ALBERT CARACO.

SIR,—I was very interested in Mr. L. Longfield's letter regarding roll-film developing tanks and most heartily endorse his views. I have been considering the same question for some time, but I have not yet purchased a tank—partly for fear of the disadvantages enumerated, and partly on account of the unreasonable price of the present items on the market. A glance round any sixpenny bazaar will reveal numerous bakelite moulded articles which are far more complicated than any developing tank, and I object on principle to paying much in excess of £1 for an article which cannot have cost more than a few pence to manufacture. In defence of the price it is argued that developing tanks are required only in small quantities, but I have myself seen sufficient tanks to make production possible at a quarter the price.

Turning to the question of the efficiency of various tanks, I would like to suggest the following arrangements which would have the advantages of simplicity and durability:—

(a) A drum of bakelite or any other suitable material of sufficient diameter so that a film can be wound once round the circumference. For a $2\frac{1}{4} \times 3\frac{1}{4}$ film the drum would be only approximately 10 in. in diameter. The drum could have $\frac{1}{4}$ -in. flanges to act as a guard and a guide for the film, and a pair of simple clips would suffice to keep the film in position.

(b) A containing vessel with light-tight lid so that the internal diameter is, say, $\frac{1}{4}$ -in. greater than the drum. This close fit, together with the displacement of the drum, will ensure economy in developer.

A further accessory, which could be sold separately from the tank, would also be useful. A wooden or metal stand could be arranged with an axle to fit the drum, so that the latter could be rotated in a vertical plane over a dish when close inspection of development is required.—Yours, etc.,

J. ATKINSON.

STRAIGHT PHOTOGRAPHY.

SIR,—How refreshing to see that Mr. Chas. E. Rollinson, in describing how he makes his exhibition pictures in your issue of August 15th, prints "straight," and endeavours to depict the truth.

That the reverse is fashionable is too obvious in many photographs. Yet the word from its derivation would appear to mean the representation of light and shadow. Surely, then, the photographer's ideal should be to portray light and shadow in as nearly accurate tones as is possible. This is done by careful selection regarding the subject of film, exposure, developer, and again materials used for the final print. I do not think photography should include all manner of touching up and—literally—faking to produce a desired effect. The arts of painting, drawing, and even advertisement design are entirely separate, each requiring a different form of talent. If one admits the employment in photography of brush, palette, pencil, and other devices, except for curing technical blemishes, it is no longer true representation of light and shadow, and, as Mr. Rollinson says, perpetrates a falsehood.—Yours, etc.,

"TODOKO" (India).

LAY PRESS CRITICS.

SIR,—Your amusing comments in "Topics of the Week" concerning the newspaper reporter acclaiming a commercial enlargement as the picture of the year at the Royal Photographic Society's Exhibition, throws a great deal of useful light on the trustworthiness of the photographic criticisms to be found in some sections of the Press. A journalist in one of our more distinguished daily papers does indeed notice the Natural History Section of this Exhibition, but the Pictorial Section is practically beneath his contempt. To his befuddled intellect any control process in photography is merely some attempt to disguise it as an etching or engraving. Paradoxically enough, the Press photographers of the same paper parade before the public as a self-styled art department. A further paper, which has the modesty to pounce on us not more than once a week (and that on the Sabbath!) in spite of its concern with artistic matters, publishes "photographs" usually attended with some glamorous title, large in size, toneless in quality, and as for artistic appeal, this quality is so lacking as to make them positively repulsive. It is indeed fortunate that photographic journals like *The Amateur Photographer* exist, for without them one trembles to think what the public opinion would be when fed only with such balderdash.

It must be expected that the exhibitions will matriculate into full public favour when they, in common with those of painter artists, will be in the happy position of being able to hang pictures upside down (and not know it!) for the admiring gaze of high "aht" circles. A phase we might appropriately term last-post impressionism.—Yours, etc.,

E. GORDON BARBER.

TELEPHOTO APPARATUS.

SIR,—Long-range telephoto lenses, at long-range prices, designed expressly for use with Continental miniature cameras, are on the market. "Miniature" means "small photographs"; the prices are enlarged ones.

I have a 3-in. British telescope; it cost new £6 10s.; I combined this with a $\frac{1}{4}$ -plate camera with focussing screen, 17s. 6d., and an astronomical tripod, 7s. 6d., both second-hand British items. A finder and secondary focussing screen permit the use of box and folding film cameras. Hypersensitive plates and films, in conjunction with Ilford "Astra," "Micro Five," and other filters are used. The combination must not be pointed directly at the sun.

Although corrected for visual astronomical work, the object-glass is perfectly adapted to terrestrial day or night photography. The total *f*/value being about 14 no iris is necessary, and that on the camera must be left at full aperture.

Thus a little ingenuity can make £10 do the work of £350. A general study of advertisements will confirm the latter item.—Yours, etc.,

A. TROWBRIDGE.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

PLATES FOR FLOWER PHOTOGRAPHY.

I HOPE you have some recollection of the illustration to the beginners' note in last week's issue. It showed a china dish containing three of those curious bulbs which, without earth or water, send up spikes of flowers. In this case the flowers were pale mauve. The point in reproducing it was to encourage a reader—more than one, I hope. This photograph was taken on a medium-speed orthochromatic plate, without a filter; and after carefully examining the original I came to the conclusion that I could not have got a better result whatever material I might have employed.

The particular reader I wish to encourage is one who wishes to photograph straightforward flower subjects at home, but who hesitates to attempt to do so because he has never used panchromatic material. There is nothing fearsome about panchromatic material, and later on he

should tackle it boldly. Meanwhile, he can do quite a lot of good flower work without it. Some of the pundits will throw up horrified hands at such a statement, but they can hold them up till they drop off for all I care.

One of the best-known flower and fruit photographers, years ago, never used a panchromatic plate. He certainly used discretion in selecting his subjects; and that is what I advise this anxious reader to do.

For example, the sort of plate I used for the bulbs has not distinguished itself with the scarlet geranium in Fig. 1. Apparently, the geranium bloom is black. The version in Fig. 2 is better because a panchromatic plate was used instead. Very well; no pan. plates no scarlet geraniums. But there are pink geraniums, and white ones. Or, in general, if we do not use panchromatic material we must avoid deep red colours. The distinguished photographer

Fig. 1.

Fig. 2.

Fig. 3.

to whom I just referred made quite a sensation with a rendering of a bunch of currants; but he took care they were white ones.

Fig. 3 shows what may easily happen with a yellow flower, even when using an orthochromatic plate which is sensitive to yellow. It is evident that the chrysanthemum is much too dark. The lighter tones, such as they are, result mainly from the reflection of "white" light from the shiny surface of the petals. The comparative tones of the yellow and white flowers as viewed by the eye are by no means satisfactory in the print.

The explanation is that although an orthochromatic plate is sensitive to yellow, those rays must be given sufficient time to act. A longer exposure would have made all the difference; but this would have been too much for the quick-acting rays from the white flower. If only we could find some means of holding these back a bit while we gave the yellow rays a chance we could do better.

Fortunately we have the means of doing this. We can use a yellow filter. This will let the yellow rays pass, but will keep out some of the too-active blue and violet rays from the white flower and elsewhere. This is what was done for Fig. 4, and the chrysanthemum and the yellow centre of the anemone are all the better for it, while the white flower comes out as before. The general conclusion

Fig. 4.

then is to use orthochromatic plates, or any non-panchromatic films, and a yellow filter—a light one for most yellows, and a deeper one for orange. With the latter, let it be whispered, we can also give a good account of many reds.

W. L. F. W.

Some Hints on Print Trimming

By "AUBURN."

BEFORE going into the hands of admiring friends or reaching the pages of the album, the last process through which the print must go is trimming. Trimming is none the less important for being the last process, and can make a vital difference to the appeal exercised by the print. There is an indefinable neatness about a well-trimmed print that somehow lifts it above the level of the D. & P. merchant's wide and inartistic border.

What does the amateur trimmer need in the way of "kit" before he can start work?

First, a cutting tool. Now this is an occasion when old razor blades can really be used up with advantage, for a keen cutting edge is essential to obtain a "clean" cut. I prefer to use a single-edged blade, such as the "Valet," where the non-cutting edge is engaged with the razor, and there is "something to hold." With the blade held in this

guard between thumb and forefinger, there is little distinction of position between writing with an upright pencil.

Next, a baseboard. The requisites here are a surface which does not impair the cutting edge of the tool by "clinging" to it or become cut about itself; and yet a surface which allows an easy passage to the cutting edge, thus giving a "clean" cut. A sheet of glass satisfies these conditions admirably, and has the added advantage that a coloured background can be introduced, which by contrast will throw up into prominence the print being cut.

Lastly, a guide is needed to ensure a straight edge finally appearing on the trimmed print, and a wooden ruler is useless in this respect. With a sharp razor cutting edge this would suffer as quickly as the print, and therefore a draughtsman's metal ruler is essential.

Having dealt with the implements, perhaps in conclusion a word or two

on the actual cutting may be helpful.

The holding of the razor has already been mentioned, and apart from indicating a position where the unused part of the cutting edge is lifted well off the paper, imparting a slope to the blade, little more remains to be said. After some practice it will probably be found that a "one-two" action in the actual cutting will give the best results. Press hard with the ruler as the blade finishes the stroke to avoid the possibility of tearing the corner of the print.

Do not slope the blade to give a bevelled-edge look to the cut; rather slope the other way, so that the cutting actually takes place under the guiding edge of the ruler. This gives the finest clean-cut edge. In any case, it will be found that two or three light cuts with the blade will ensure a more perfect edge than one heavy cut. There is also less risk of the metal ruler slipping.

How I make my EXHIBITION PICTURES

No. CCLII.

Miss
PAMELA
BOOTH.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"I NEVER set out with the definite idea that 'now the . . . exhibition is coming on I must get something to send in.' In my experience, the results of work prompted by such a motive are disappointing. If, on the other hand, I take a photograph because I want to do so, and feel in the mood, I am far more likely to get a result worth exhibiting.

"I am more interested in portraiture than in any other branch of photography. When I am making a

portrait, my aim is simplicity. Above all, I avoid anything that savours of being 'stunty.' Large heads, severely trimmed, and strong lighting effects in the German style appeal to me; but anything forced or unnatural about the pose or viewpoint, or a discordant or fussy background, I avoid.

"When I give a sitting I work with the definite object of conveying something of the character and personality of the sitter. That is why my favourite subjects are men, preferably men of distinction whose faces for the most part are a fair indication of the depth of their feelings and their experience of life. Also I can seldom resist taking character studies of types from all walks of life.

"Women who make excessive use of cosmetics always set me a problem; and really I rather avoid taking them, because extensive retouching is necessary to please them. This means that most of the skin texture is destroyed and the modelling flattened, with the result that the portrait does not *live*. Needless to say, I do the minimum of retouching on any portrait I make.

"As to my methods, I use daylight whenever possible, if necessary combining it with half-watt light. When I am forced to use artificial light I use as little as I can, in order to avoid over-lighting and the consequent flattening of the modelling it produces.

"I use orthochromatic materials, and develop by inspection for the sake of the control I can then exercise; but when it comes to printing I choose according to the subject. Sometimes I can visualise my finished picture in a given process long before I make the negative; but usually I decide the printing process on seeing the negative. I use such processes as bromoil, bromoil transfer, gum-bichromate, etc., not because I am ashamed of my photographs looking like photographs, but because I want them to look like pictures. But in making photographs pictorial in this way I avoid working-up as much as possible. A heavily-worked-up bromoil transfer, say, gives the carping critic a chance to say that it is no longer a photographic process."

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

THERE can be but little doubt that No. 1 of the prints reproduced on the opposite page—"A Raging Sea," by Ian Malcolmson—does convey some idea of the theme suggested by the title, but, while the foam of the breaking wave is well recorded, the impression remains that it had either not attained or had just passed that instant of time when it was at its greatest magnitude.

The Psychological Moment.

Judging from the fact that the direction of movement would be from right to left, and that the end of the breaker appears on the extreme left, it would seem that the probability is that the psychological moment had passed, and that, had the exposure been made a fraction earlier, a much bigger splash would have been shown just about where the dark of the distant rock is now placed.

In that event, the force of the effect would be much more concentrated, and it would tell a great deal better than it now does. At present, its power is spread over so wide an area that the impression is dissipated. It loses by dispersal; but, were it localised, as it would have been if the right moment had been seized, and the greatest splash placed as described, it would only need a certain amount of trimming from both sides and the base to make a most effective picture.

However, it must be admitted that the difficulties of choosing the right moment are considerable, and they are generally heightened by the need to take precautions to maintain a foothold against the stress of wind and weather. So that, keeping this in mind, the result may be viewed as creditable, and, with experience, as indicative of better things to come.

Concentration of Interest.

A greater concentration is displayed in No. 2, "South Coast," by George Hilleard, where the interest centres in the sunlit portion of the cliff.

The effect is very pleasing, and, as far as it goes, well seen and caught, but, on the other hand, the lack of anything to serve as a stable base is very severely felt. What is needed is the inclusion of some pronounced horizontal lines towards the lower

margin, together with a much greater weight of tone, such as would, in the usual run of things, be furnished by the presence of the base of the cliffs and a modicum of shore.

Apparently, the viewpoint was so near that their inclusion was impossible. The remedy is obvious, nor need it be assumed that a more distant point of view, with a consequent reduction in the proportion shown in sunshine, would diminish the value of the effect, for it would gain rather than lose.

The increase in stability, too, would introduce a better sense of order into the composition and give it form and shape. It is very seldom indeed that a real sense of the quality can be incorporated where the base of a feature or object is omitted, except, perhaps, in those cases where the lack of foundation is obscured by depth of tone, or where something is provided to take the place of the immediate foreground.

Strength and Stability.

An example of the former kind of exception is to be seen in No. 6, "The Prow," by C. S. Reid, where, although the water line of the vessels is not shown, the tone at the base is so heavy that the omission is not noticeable, and no feeling of insecurity arises.

The selection of the material, in this instance, shows promise, and, in a way, is reminiscent of a similar subject, "The Bow," which was reproduced on one of our centre pages and reviewed in our issue for the 10th of this month. Reference might be made thereto with the idea of seeing how this sort of subject should be treated and how the restriction of the subject material provides a simpler and better composition. The difference that a due measure of tone in the sky confers should also be noted, for, in this respect, this week's example is regrettably lacking.

Something might be done to improve matters by the substitution of a softer grade of paper for that first employed, for this should enable a deeper tone to be shown in the sky without overprinting the darks, or, alternatively, a shorter time of development of the negative, by the consequent reduction in its contrasts, would have permitted

the original paper to render both extremes of tone satisfactorily.

Subject Character.

However, a contributing factor is the character of the subject. The darks near at hand have to be recorded at the same time as the very much lighter sky. The difference between the two is extreme, or, in other words, the subject contrast is greater than normal.

It is this extended range in the subject that renders an adjustment in the normal procedure necessary, and it must either be effected during development of the negative by curtailing the time, or, where that may not be feasible, as is the case when a length of roll film is under treatment, during printing, when a paper of longer range (a softer grade) should be employed.

The contrasts of a subject like No. 5, "The Speed Boat," by L. F. Thomas, are by no means so great, and the normal time of development for the negative, followed by subsequent printing on the appropriate grade of paper, should provide a perfectly satisfactory print. If it should happen that a similar subject to No. 6 was on the same roll of film, its contrasts would be much too great for the same paper, and, in order that a harmonious print might be secured, recourse would have to be made to a grade of softer characteristics.

Suitable Adjustment.

There are cases, of course, where the adoption of this expedient is impracticable, but, in the average run of amateur work, they are seldom met with. If it should happen that a flat subject like a light-coloured building taken on a rainy day, and one of extreme range such as an interior with parts in sunlight occurred on the same roll, the only thing to do would be to divide the film, giving the flat subject three or four times the normal, and the one of extreme range half or a third of the usual time.

Such a contingency, however, is rare, and neither of the two remaining subjects—No. 3, "Homeward Bound," by R. S. Hardy, and No. 4, "Land's End," by K. S. Marsh—goes beyond the normal range, nor do they call for special treatment. "MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"CURVES," by F. R. Dapprich.

THIS picture is interesting inasmuch as it provides an example of the possibilities that may be exploited by the discerning in finding a subject with next to no material, and in what would ordinarily be the most unpromising surroundings. There are only the two arches, the roadway, and a stream of motor cars, together with a gleam of light.

The Vital Element.

It is true that there might be some attraction lying in the curves of the archways, their relation to each other, and the repetition of their shapes; but it is one of form, and interesting only to a greater or less degree as an essay in design or the formation of a pattern.

That, however, is a phase, which, if of a not inconsiderable value, is nevertheless part of the construction; but the vital element, on which the pictorial appeal relies, is the gleam of light on the façade of the second arch (1). It is this feature which makes the picture. It transforms the lesser attraction of form into something which stimulates the idea of beauty. It provides the essential vitality that inspires the emotions, and confers a living quality upon a basis which is characterised by excellent form but of little æsthetic attraction otherwise.

Notwithstanding its subsidiary function in the scheme, the form has a role of considerable importance in that its design, the pattern it makes, and the way it is disposed, provide an orderly foundation which enables the effect to be intelligibly conveyed. It provides the framework on which the gleam of light is displayed, and by encirclement or enclosure, by the contrast of curves against straight lines, by force of repetition, and the relationship which the lines bear to one another, stresses the importance of that splash of light as the pictorial motive.

Design and Enclosure.

The light itself, as the brightest note of the picture, has an innate attraction. That, again, is heightened by the proximity of darks of appreciable depth of tone, and, further, by force of position. These factors combine to make it the centre of interest or the

the print. The nearest of these curves suggests an enclosure, although it is not actually complete; but the second, for all practical purposes, joins up with the foreground at the extreme left of the picture, and really does enclose the beam of light (1).

The third of the curves leads up to and forms one of the boundaries of the area in light, and the adjacent band of dark, which follows the same formation, heightens its importance by power of contrast. There remains the fourth and last of these curved lines, the principal function of which is allied with that of the band of dark of which it forms the edge.

The feeling of enclosure so created stresses, to a yet further degree, the dominance of the point (1), and this is emphasised, in the third place, by the sense of repetition afforded by the occurrence of the four curved lines in succession. It is this repetition, and the relationship which the lines bear to each other, that imparts a suggestion of design or pattern to the arrangement. From this arises a sense of order that not only aids in pulling the composition together, but also enhances its significance by the introduction of an impression of a decorative character.

Light in Darkness.

The suggestion might possibly be advanced that a certain sense of competition, and consequent division of interest, arises from the light seen through the far archway; but, on reflection, such a contention could scarcely be sustained, for, quite apart from the fact that the light at (1) is appreciably the stronger, it also has a greater magnitude; is nearer; and the line suggested by the traffic is from right to left.

In any event, there is no suggestion of disunity, and, altogether, the picture provides an excellent example of the modern tendency to combine pattern with effect.

"MENTOR."

foundation of the composition, and the incorporation of the design considerably magnifies its significance in yet another way.

In the first place, all of the curves spring from a more or less common source in the point (2). This point, therefore, in conjunction with the farther light (3) provides an accent in opposition to the principal point (1), which it balances. In the second place, it will be observed that from or near the point (2) all the four curved lines have their origin, and three of them are joined together by the line of shadow across the base of

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Use a Scenario By ALBERT W. MEAD.

THE first step of the amateur cinematographer emerging from the movie-snapshot stage should be a resolve to work from scenarios. It is not too much to say that, without a scenario, efficient production of an amateur motion picture is impossible.

The big-game photographer filming wild animals in their native haunts can hardly be expected to adhere to a written scenario. If he tried to do so, he would have more trouble with obstinate "stars" than any grey-haired Hollywood director ever experienced. The best he can do is to film whatever fate puts before him in the way of cinematic "copy." His only scenario he carries in his head.

Later, from the miles of film that constitute his bag, a few thousand feet are coaxed into some sort of sequence. It is possible to produce, in this way, a picture that is successful from the viewpoint of ultimate exhibition.

The cost in cash, if not in time, puts this sort of production beyond the reach of most amateurs, and therefore outside the realm of efficient production. The big-game photographer would be most astonished, however, to realise that many amateurs with opportunity for careful preparation before exposing a single foot of film, attempt to work under a similar handicap entirely self-imposed.

The second step of the amateur emerging from the chrysalis should be to decide what form of scenario will satisfy his own particular needs. It is true that the simplest form is better than none, and the club scenarist will naturally prepare a more comprehensive scenario than the lone worker who is also director and camera-man.

A scenario for a general interest or travel film—the most usual productions of the lone worker—might be a simple list of scenes and titles, written in screen sequence, and then re-arranged in the order in which they will be filmed.

A loose-leaf notebook is ideal for this purpose. Each scene should be confined to a separate page, clearly numbered with a blue or red lead

pencil. Re-arrangement is then a simple and convenient process.

The lead pencil can also be used to cancel each page when its scene has been filmed. If a tick is used to denote this, there will never be any doubt about what remains to be filmed. Later, when the "rushes" have been viewed, those scenes which are satisfactory can be finally O.K.'d with a pencil of different colour.

The simplicity of a scenario of this sort makes it none the less valuable. By studying each scene on the list before setting out with the camera, the amateur is able to visualise the screening of each shot as it could be secured from every conceivable angle and distance. On location later, he will have the great advantage of knowing exactly what he wants, and consequently a good chance of securing it.

The amateur who has never used a scenario should make up his mind to

prepare one, however simple, before exposing any more valuable film. Its use will lead to more satisfactory pictures, economy of time and money, and the discovery that scenario writing has a fascination of its own. Not for long will he be content with the simplest form of scenario. That is as it should be. The simple scenario is the first step, but it is a step that many amateurs have yet to take if they wish to get the best out of the most fascinating of hobbies.

It must be admitted that the preparation of even a simple scenario needs careful consideration. It may be compared with constructing the skeleton plot for a story, and no one who cannot do this would be likely to write a good scenario. Similarly, a good, smooth-running film cannot be made without a suitable foundation, and a definite purpose. Careful planning beforehand is nearly half the battle; it makes for success.

Public School Football. Many fine action subjects are now available on the various football grounds attached to public schools in different parts of the country. They are easy of access, and offer even better opportunities than the professional game.

Amateur Ciné Activities

By
M. A. LOVELL-BURGESS.

THE many aspects of cinema are being faithfully dealt with in amateur ciné clubs and studios this winter. We are beginning to realise that cinematography makes contact with almost every phase of life. There is something unusually fascinating about a hobby that starts off, as it were, with a camera, and instead of following a well-worn track, as is the way with most hobbies, continually opens up before us unexplored country. "The Londoner's Sunday" is the provisional title of a documentary film to be made by the ciné, section of the City Literary Institute Film Society. Members are now at work on the scenario. "Interested" A.P. readers should write to the Production Secretary, Mr. G. Thomas, 53, Richmond Road, E.11.

A Liverpool "A.P." reader writes to suggest that secretaries should arrange lectures by artists, writers, architects, musicians, etc., on their aspect of art in relation to the cinema. As it happens, I am giving a talk in Eastbourne early in January on "The Writer and the Cinema" to be followed by discussion.

Members of the Wimbledon Ciné Club, whose films are presented under the name of "Grosvenor Productions," and whose President is Mr. Adrian Brunel, held their annual competition for the "Brunel Cup" at their Studio in Worple Road on October 6th, and individual efforts by various members were shown. This club—whose vice-presidents include Lady Fitch and Lady Roney, J.P.—has a publicity manager, Mr. H. C. Eealby, as well as a secretary.

Amateur ciné competitions are always popular. Over 300 films made by amateurs in all parts of the world were received by the Institute of Amateur Cinematographers in London in connection with the international championship competition. The result will be made known in November.

Members of the Eastbourne Amateur Ciné Enthusiasts' Club met at the Oak Cabin Restaurant recently to hear a talk on "The Principles of Sound on Film," given by Mr. J. Toft Bate, a keen fellow-member.

The Scope of Films.

Can a film be made to express opinion? We use the word "interpretation" in connection with all art, but it is particularly true when applied to cinematography. The ciné camera, left alone as it were, records objects indiscriminately. The mind behind the ciné camera has first to select, and then to isolate, objects and scenes in order to produce a given aspect or to express a certain purpose. It is, incidentally, a fact, alike in science, theology and philosophy, that if you sufficiently isolate any one aspect, however true that aspect may be, there will be distortion. A parallel to that may be found in literature. A sentence, however correctly quoted, may be robbed of its true, inner meaning by isolation from its context. In the pictorial medium opinion must become objective. In other words, it is only by the grouping, placing and recording of objects that the producer can, and does, express ideas, purposes and personal opinions.

I have before me, as I write, three letters from ciné amateurs demanding religious sub-standard films. Mr. H. Bucktrout, superintendent of the Halton Methodist Sunday School, writes, "My experience has been that in 9.5-mm. libraries the only religious films listed were 'Christus,' and 'Joseph and his Brethren,' and the former I did not care for very much."

Mr. H. W. Lee, 11, Mill Hill Lane, Highfields, Leicester, hopes to start a group in Leicester next year for the making of religious films. In preparation, he wants to organise projection shows in a few parishes this winter. He asks, "Can you give me an opinion of the Pathé film 'Christus'?"

Mr. Ernest R. Scott, 44, Falmouth Street, Cottingham Road, Hull, writes to tell me he has bought a Pathé 200-B model projector, and thinks he could do some good in providing entertainments in connection with churches in his circuit, if he could get some suitable films.

Here are Ideas.

Why is it that no amateur ciné group has ever made a religious film? I think the reason is due to a vagueness as to what constitutes a religious film. In my opinion, a religious film should be interdenominational and it should not attempt to portray the Christ. It should take for granted the one essential on which all Christians agree—namely, the truth of the Christian faith. It should not deal with points of doctrine. We have a good example of a religious film in "Mastership," with Lax of Poplar in the role of preacher. But that is, naturally, a treatment more suitable for a talking film. For a series of silent films I would recommend dramatising the parables; or modernising them. The Pharisee and the Publican could be presented in terms of a prosperous business-man, a down-and-out, and a cathedral; and the Good Samaritan parable could include a car victim on an arterial road. If people get a shock from this treatment so much the better. The parables were originally modern. A film worth making would be one showing the architectural development of Christian churches, and the relation of each development to its corresponding phase of civilisation, including shots of churches built both without and within to modern designs. Such churches as St. Nicholas, Burnage, Manchester, St. Wilfrid's at Brighton, and St. Saviour's at Eltham, are typical of many now being built in new housing areas. Amateur ciné workers who indulge in Continental holidays can find examples of ecclesiastical modernism in Berlin's newest church, or in Rome or St. Wenceslas at Prague. And it would be but a step to a ciné camera construction of the cathedral of the future, swept clean of mediæval images and shrines, with one side chapel set apart for films, another for televised broadcast services, and yet another for broadcast music to aid silent prayer. And there would be a landing-stage for the bishop's aeroplane. Do you think all this is too imaginative? Anyway, it is an alternative to "Christus."

A Note from the Brondesbury Ciné Society

FIRST of all we should like to apologise to the many amateurs we had to disappoint for our show. Although we only intended to have one evening, we had to extend it to two nights; we hope that later on we shall be able to give a repeat performance.

The films shown were "Nightmare" and "Contact," lent by Rhos-on-Sea A.F.P., two thrilling productions which were much appreciated; "Eynesford," by G. W. Eves, a Club member, was admired for the beauty of the scenes and photography. Considering he has had only twelve months' experience, it is a masterpiece. The fourth item, entitled "Week End," by L. Elliott, was shown, and it is remarkable for editing and very good cross-cutting. Then came "B," which we asked visitors to criticise. The general feeling was that it was a good film, and that the criticism it has received in certain quarters did not do justice to it.

The studio, projection theatre and club-room were officially opened on Friday night; many well-known amateur cinema-

tographers were present and all highly praised our efforts. Music was provided by loud-speaker, fixed behind the screen, and two turntables with a two-stage Pelmica amplifier. The studio was very much admired, especially the lighting, which consists now of 35 kw. The "set" was much discussed; it is a room in an old cottage, for our present production, "Two Candles," a 700-ft. film made entirely in the studio, and not one single shot taken out of doors.

The club-room on the first floor is nicely furnished and available for members at any time. It may be used for titling, editing, etc., and there is also a ping-pong table provided. The membership list is still open, but only real enthusiasts will be considered. That is why an entrance fee of two guineas is charged; the subscription is two guineas per annum.

We have decided to start a 16-mm. group, and work will begin shortly. We have equipped ourselves with an Ensign new Kinecam, with a 1.5 Hugo Meyer lens, and a Siemens "Standard" projector.

THE SUPER NETTEL MINIATURE CAMERA

WE have recently had an opportunity of using and testing the latest introduction of the Zeiss Ikon firm—the Super Nettel miniature camera. Already this firm has been responsible for the well-known Contax camera, but as they point out, a camera costing from £27 upwards must appeal, obviously, to well-to-do people, and they have felt that there is room for yet another miniature camera taking Contax spools, of a somewhat more simple but nevertheless efficient construction, and possessing the high-class design associated with the Zeiss Ikon trade mark. This is the reason for the introduction of the Super Nettel.

We may say at once that this camera is a remarkable achievement in construction and efficiency. It opens easily with pressure on a small projection; the front springs into position for immediate use, and it is entirely rigid, due to the special type of extension struts.

The first thing that strikes the user is the finder equipment, which is harnessed with a distance meter, and is an

integral part of the instrument. A touch with the finger-tip automatically focusses the object by means of the range-finder which is as ingenious as it is accurate. Absolute accuracy of focus can be depended on by viewing through this finder, which is a joy to use.

Next, the all-metal focal-plane shutter is also a pleasure to set and release. The speeds can be altered from 1/5th

A large winding head for the shutter, which automatically winds on the film for the next exposure, is admirably placed and very smooth in action.

The back of the camera is readily and easily detachable, and when removed for

reloading enables the "works" to be seen and if necessary cleaned. The loading with Contax spools is extremely simple, 36 exposures of $1\frac{1}{8} \times 15/16$ ths in. (24×36 mm.) on perforated ciné film are available with one loading, which renders the camera an ideal instrument for the traveller.

The lens is in a sunk mount and is protected by the baseboard when the camera is closed. Zeiss Tessars of f/3.5 and f/2.8 are fitted as standard.

In use we have found it a delightful little camera for all kinds of subjects. The remarkable range of exposures given by the shutter makes it particularly valuable, and the high quality of the lenses fitted enable negatives to be secured that are capable of great enlargement.

The Super Nettel costs £21 12s. 6d. with f/3.5 Tessar, or £23 10s. with f/2.8 Tessar. Contax spools of 36 exposures cost 3s. 8d.

Further particulars and illustrations of this attractive little camera are obtainable on request from Zeiss Ikon Ltd., Mortimer House, 37-41, Mortimer Street, W.1.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

The Amateur Photographer & Cinematographer

ANNUAL Lantern-Slide Competition 1934

the awards are made to individual slides and not to sets; but every competitor can send as many slides into as many classes as he or she desires. The slides are judged on the screen under the best conditions. After the judging the prize-winning slides, and a number of others which are selected for purchase, form the exhibition collection which goes on tour to all parts of the country for a year or more. Secretaries of photographic societies who have not yet booked the set of "A.P." Prize Slides should hasten to do so, and submit alternative dates. This is necessary to enable a complete and expeditious itinerary to be arranged before the slides start on their journey in November. In the meantime, those who intend entering this competition should note that the closing date for receiving entries is Wednesday, October 31st.

EVERY reader of *The Amateur Photographer* who is interested in the making of lantern slides should participate in "The A.P." Annual Lantern-Slide Competition. Not only are the seven classes comprehensive in their variety of subjects to suit all workers, but inclusion of slides in "The A.P." prize set which circulates throughout the British Isles can be considered as the hall-mark of excellence, which every lantern-slide maker should strive for. Each succeeding year the competition proves increasingly popular, and has come to be regarded as a test of merit in lantern-slide production. We hope, therefore, that again this year every lantern-slide maker will enter the competition. The conditions and awards are set out below. It should be noted that

Classes and Subjects.

- CLASS I.—Landscape with or without figures, sea subjects and river scenery.
CLASS II.—Portraiture and figure studies, whether indoor or outdoor pictures.
CLASS III.—Architecture, interior and exterior.
CLASS IV.—Flowers, fruit and other "Still-Life" subjects.

- CLASS V.—Natural History subjects.
CLASS VI.—Lantern slides in colour (not hand-coloured).
CLASS VII.—Champion Class. Open only to those who have won silver or bronze plaques in *The Amateur Photographer and Cinematographer* lantern-slide competition.

Conditions and Awards.

- (1) All classes are open to amateur and professional photographers without any restrictions. All slides must measure $3\frac{1}{4} \times 3\frac{1}{4}$ in., and must be properly spotted for showing in the lantern.
- (2) One silver plaque, one bronze plaque, and four certificates are offered in each class except Class VII. In that, the Champion Class, the award will be a mounted and signed exhibition picture by Mr. F. J. Mortimer, the Editor of *The Amateur Photographer and Cinematographer* and *Photograms of the Year*.
- (3) All slides which receive any award will become the property of *The Amateur Photographer and Cinematographer*, and will be sent round amongst the societies and such other associations as apply for the loan of them. Any other slides may be selected for circulation in this manner, and will be paid for at the rate of half a crown each.
- (4) Competitors may send any number of slides in any class, and may be recorded as winning any number of awards; but no competitor will actually receive in the competition more than one silver plaque, one bronze plaque, and one certificate, on which all his awards will be recorded. Competitors may enter in any number of classes.
- (5) Each slide must bear the competitor's name, its title and its class. With the slides must be sent an envelope containing the name and full address of the competitor, a list of

- the titles of all the slides he is sending in, and the class in which such are entered. Particulars as to make of plate, exposure, developer used, etc., and other technical data which may be of interest for incorporation in the notes which will accompany the winning slides on their tour among the photographic societies, should also be given where thought necessary.
- (6) A stamped and addressed label (not loose stamps) should be sent with the slides for their return if unsuccessful; but in no circumstances can the Editor or the Publishers accept any responsibility for slides sent in for competition, nor for their return; neither can slides be returned which are not accompanied by stamps as above.
 - (7) Not more than one slide from any one negative can be admitted, nor may any slide compete which has before won an award in these competitions.
 - (8) The last day for receiving is Wednesday, October 31st. The slides must be well packed and addressed, "Slide Competition, The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and all carriage charges must be prepaid.
 - (9) In any case of dispute, the competitor agrees to accept the decision of the Editor of *The Amateur Photographer and Cinematographer* as final.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

A film society has been founded in North London with the object of spreading the idea of film as an art medium and of giving lectures on film technique, etc. It is hoped also to supplement this work with a production group. The first performance to be given by the North London Film Society will be on Sunday, November 4th, at the Plaza Cinema, Dalston, E.8, at 2.15. An ambitious programme has been arranged. The President is Councillor M. E. Waldman, Deputy Mayor of Hackney, and the Hon. Secretary is H. A. Green, of 6, Carysfort Road, Stoke Newington, N.16, who will supply all information and particulars to any reader of "The A.P." on application.

The Gravesend and District Photographic Society have now commenced their winter season, and their headquarters are 12, Windmill Street, Gravesend, where a fully-equipped dark-room is available every Monday and Thursday. The subscription is 5s., and photographers in the neighbourhood wishing to join should apply for all further particulars from the Hon. Secretary, Eric F. Broome, 23, Clarence Place, Gravesend.

The article entitled "Infra-Red for the Amateur," appearing in last week's issue of "The A.P.," was wrongly attributed to J. Inglis Stewart. The author's name should have been given as Bernard Alfieri, Jun., who has specialised in this work for a considerable time.

We have recently had the opportunity of making further tests with the Fine-Grain Developer recently issued by Messrs. Burroughs Wellcome & Co., Ltd., in Tabloid form. Like all the products made by this firm, the fine-grain developer is not only of perfect quality, but does all that is claimed for it. It is founded on a formula of the borax type and gives negatives of good colour and remarkable freedom from grain. It does not call for prolonged development, but produces an image singularly free from fog or veil. In use the Tabloids are dissolved in plain water, using a sufficient number of the products to produce the necessary amount of solution. If ultra-fine grain is required a 20 per cent solution of anhydrous sodium sulphite is used instead of part of the water. A time-table is given of correct times for developing different films at different temperatures. Factors for factorial development are also given on the cartons, so that development to the correct degree of contrast is rendered simple. "Tabloid" Fine-Grain Developer is issued in cartons each containing materials sufficient for preparing 30 ounces of normal strength developer, or 60 ounces of tank developer.

A new Ebner camera has been put on the market by Messrs. R. F. Hunter, Ltd., of Celfix House, 51, Gray's Inn Road, W.C.1. We have already referred to an earlier model of the Ebner series, and commented on its neat bakelite "streamline" body. The new camera is similarly attractive in appearance, and has the same perfect finish both as regards its exterior and interior, but is constructed to give 16 pictures 4.5 x 6 cm. on a Six-20 Kodak film. The camera is strongly made and springs into

action on pressing a button. The direct-vision finder and sighting-pin fold away neatly and there are no projections of any sort when the camera is closed. It is, however, a highly efficient and workmanlike job and is capable of doing the best work. It is supplied with Meyer Trioplan f/4.5 anastigmat in delayed-action Pronto shutter at £6, or with Meyer Primotar f/3.5 in Compur shutter at £10 15s., or with Zeiss Tessar f/3.8 in Compur shutter at £12 17s. 6d. An illustrated leaflet with full details will be sent on application to the above address.

A useful table showing the latest dates of despatch for letters and parcels from London for Overseas Christmas Mail has been issued by the G.P.O., and is obtainable from any post office. This should be secured by all readers sending Christmas greetings and photographs to friends abroad. We note, for instance, that October 31st is the latest day for despatch to W. Australia.

The Autotype Company has introduced a new three-colour filter attachment, for use by the colour worker who does not wish to go to the expense of purchasing the Autotype Repeating Back. The three-colour filters are bound, side by side, and cemented between two pieces of glass of high quality, and slide into a metal filter-holder, which in turn

is clipped on to the camera lens mount. The standard set stocked by the Company is suitable for all lens mounts (except the screw focussing variety) with diameters up to 1½ in., and the price, including the set of filters and holder, is 22s. 6d. Larger sizes can be made to order.

An attractive little novelty that will appeal to every photographer has just been introduced by Messrs. Johnson and Sons, Ltd., Hendon Way, N.W.4. It is a cigarette lighter in the form of a tiny folding camera; in fact, at first sight it appears to be the smallest miniature camera conceivable, until its real purpose is disclosed. It represents a closed camera, but all necessary details are in view in the shape of lens, pointer for stop, finders, film-winder, and even the little red window at the back. Messrs. Johnson are to be congratulated on this neat little production, which sells at 7s. 6d. Every reader who is a smoker should obtain one, and if he is not a smoker should get one to present to a photographic friend who is.

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, October 31. Rules in the issue of September 26.

Victorian International Salon (Melbourne Centenary, 1934).—Open October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson & Sons, Ltd., Hendon Way, N.W.4.

Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26–December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

Western International Salon.—Entries, November 10; open, December 10–15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol, 5.

8th International Christmas Salon of Photography, Antwerp, 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid, Spain.

Preston Scientific Society Open Photographic Exhibition.—Entries, January 11; open, January 28–February 16. Exhibition Secretary, F. Wells, 65, Powis Road, Ashton-on-Ribble, Preston, Lancs.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25–March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester.

City of London and Cripplegate P.S. Annual Exhibition.—Closing date, February 11; open, March 11–16. Exhibition Secretary, J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed to: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a separate stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Blocking Window.

What is the best and cheapest way of darkening a skylight to make a dark-room? Will transparent red paint do? J. R. D. (Edinburgh.)

You must dismiss the idea of using paint or anything of the sort for the window. The only safe way is to block it up with a removable screen, in the form of a wooden frame covered with linoleum or something else opaque. It is far and away the best plan to shut out all daylight and use a dark-room lamp. When you remove the screen the window will be available for ordinary lighting purposes.

Stained Prints.

What is the cause of the yellow stains on the enclosed gaslight prints? J. B. (Bramcote.)

There are two principal causes for such stains as you are getting on your prints. The first is under-exposing the paper and leaving it in the developer too long in the hope that it will strengthen properly. The other is not rinsing out the developer before putting the print in the fixing bath.

Bleaching Print.

How can I get rid of the image on a silver print on which I have drawn with fixed ink? A. W. A. (Sevenoaks.)

There are several ways of getting rid of the photographic image, as we presume that it is on bromide paper, although a silver print does not definitely indicate this. Make up a strong solution of copper sulphate so that it is a deep sky-blue colour, and add to it some common salt; the quantity is immaterial as long as you put sufficient. It is better to bleach the print by artificial light. When the image has disappeared, put the print through one or two changes of clean water, fix in a plain hypo bath, and then wash thoroughly. A better bleach for the purpose is a solution of $\frac{1}{2}$ oz. potassium iodide in 10 oz. of water, with enough metallic iodine added to give a deep ruby colour.

Uneven Density.

The enclosed negative is one of many in which there is a streak of uneven density down the middle. The dish was rocked continuously. Can you explain the cause? W. S. (Barnsley.)

The cause of the trouble with your negatives is that you rocked the dish in one direction only, and with a very fully-exposed negative such as this the band of lower density along the middle is almost certain to appear. We shall probably deal with this question at greater length shortly.

Stop for Landscapes.

I am chiefly interested in landscape work, and propose to buy a — miniature camera. Am I correct in assuming that an $f/3.5$ lens has greater defining power than an $f/4.5$? Will the negatives enlarge to 7×5 ? P. J. E. (Wandsworth.)

It is very rarely that you require to use a large-aperture lens for landscape work, and you are mistaken in supposing that an $f/3.5$ aperture gives better definition than $f/4.5$. With the camera you name and a reasonably small aperture there is no reason why the negatives should not enlarge satisfactorily up to any size you are likely to require.

Contrasty Negatives.

I enclose some negatives and prints. Can you give me a hint on how to get better results? R. H. J. (Cullompton.)

Many of your negatives are much over-developed, in some cases following under-exposure. The result is that the negatives are too contrasty; that is, too clear in some parts and too dense in others. To add to the trouble you are using a contrasty paper, which simply emphasises the defects. For these contrasty negatives you must use a softer grade of paper.

Scratched Condenser.

The condenser of my enlarger is scratched. Can you give me an address in the neighbourhood where I could get the scratches taken out? C. P. (Upton-on-Severn.)

We have no addresses of people who repolish lenses anywhere in your neighbourhood. You do not say what is the size of the condenser, but we should imagine that it would be quite as expensive to have the glasses repolished as to buy a new condenser.

Amidol Developer.

Can I keep a stock solution of sulphite and add amidol to it as required? Is the exact amount of amidol important, or would it be possible to use a small scoop of appropriate size as a measure? N. R. M. (Sheffield.)

Suggestions have been made for an amidol solution that will keep for some time, but we should not advise you to attempt to keep a solution of sodium sulphite, nor is there the slightest need for anything of the sort. If you use the anhydrous sulphite it will dissolve at once, and all you have to do is to add the necessary amount of amidol. As regards this amount, there is considerable latitude, and if you find a small scoop or something of the sort that will just hold an amount that has been weighed out for the purpose, you can safely use it in future without further weighing.

Making Filters.

I want to try my hand at making filters. Will you tell me what dyes to use? J. T. M. (Newcastle.)

The questions you put cannot be dealt with briefly, and are matters for reference to a good textbook. In the "Dictionary of Photography," published by this firm at 8s. post free, the question of colour filters occupies six pages of small print, and even this is only dealing in a comparatively brief manner with the subject.

Markings on Lens.

I have a lens mounted in a shutter. What do the following markings mean? $1:8 F = 10.5 \text{ cm.}$, B. T., 32, 22, 16, 11, 8, with a pointer underneath. J. B. (Gateshead.)

The inscription on your lens means that it has a focal length of 10.5 centimetres, and that the largest stop is $f/8$. The other stops are shown by the numbers with the pointer. The next smaller stop is $f/11$, and with this you must give double the exposure for $f/8$. Each time you go to a smaller stop you must double the exposure for the previous one. When you set your shutter to B, it will open and remain open until you release it; when you set it to T, it will open and remain open until you press the trigger again.

Using Photographs.

Can I send prints of the same subject to several papers and magazines at once? If I send a print to a competition and it is published can it be sold again? J. P. (King's Langley.)

There is nothing to prevent your sending copies of the same subject to any number of papers and magazines at the same time. If the organisers of the competition have reproduced one of your prints without any arrangement as to acquiring copyright you can still do what you please with further copies.

GARNER & JONES Ltd., Polebrook House, Golden Square, W.1

THIS WINTER

Analyse your Season's results.

Some, we hope, will be real Exhibition prints. Others may fall short for want of, perhaps, just that difference of definition or extra rapidity that a

ZEISS LENS

could have given. Some, perhaps, would have been better if taken with a longer focus lens and a more distant view-point; others, maybe, needed a wider angle than your lens would cover. A ZEISS TESSAR with Distar and Proxar attachments would have provided both without the necessity for carrying a battery of lenses.

Business Notices

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot, Watloo, London." Telephone: Hop 2333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less 2/6
 2d. for every additional word.

Each paragraph is charged separately.
SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post **FRIDAY** for the following week's issue, or one day earlier at the Branch Offices, 19, Bedford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; £60, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

& Co.

Notes being untraceable if lost in transit should not be sent as remittances.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

~ The Journal for Everybody with a Camera ~

Vol. LXXVIII.

Wednesday, October 31st, 1934.

No. 2399.

A Rolleiflex Picture

Wouldn't *you* like to get indoor pictures like this? Well, you can! And it's infinitely easy with a Rolleiflex. Not only does its separate finder lens enable you to catch your subject just at the right instant—but its high-class Zeiss Tessar taking lens gives remarkable results at any time, which with an ordinary lens would be impossible.

Rolleiflex pictures make beautiful lantern slides and the Rolleiflex can also be used for making "stills" for ciné pictures

With F/4.5 Zeiss Tessar, £20 : 0 : 0 With F/3.8 Zeiss Tessar, £22 : 10 : 0

Get your camera out to-night!

★ Inexpensive New Kodak Equipment makes indoor picture-making at night easy.

Fast Kodak panchromatic films, extremely sensitive to artificial light, allow big reductions in exposure times. Handy, low-priced lighting aids provide brilliant, easily-controlled illumination in any room.

Fireside portraits, a bridge party, the kiddies at bath-time—new pictures in plenty—start making them to-night!

KODAK SUPER SENSITIVE PANCHROMATIC FILM.

Three times as fast as regular Kodak Film to artificial light.

"PANATOMIC" FILM.

Not quite so fast as "S.S. Pan," but still very much faster to artificial light than regular Kodak Film. Superfine grain.

THE NEW "PHOTOFLOOD" LAMP.

THE "KODAFLECTOR" JUNIOR.

THE "SASHALITE" OUTFIT.

NEW "PHOTOFLOOD" LAMP.

Plugs into ordinary electric light socket; gives intense, continuous light; one and half times as powerful as earlier type, yet reduced to nearly half the price. Lasts for approximately two hours continuous burning time, sufficient for an immense number of exposures. Safety fuse incorporated 4/-

"KODAFLECTOR" JUNIOR.

Reflector for "Photoflood"; increases effectiveness of illumination two and half times. Supplied with handy wire stand that can be stood on table, hung from wall, over chair, etc., in a dozen useful positions. Complete with 9 feet of flex, but without lamp 6/-

"SASHALITE" BULB.

The powderless successor to flashlight. Flash takes place in sealed glass bulb, fired by ordinary torch battery. No smoke, no smell, no danger. Each bulb gives one brilliant flash. Allows night-time indoor snapshots to be taken with any camera.

Per bulb, 10½d.

Complete Sashalite Outfit containing 2 Bulbs, Battery in Holder, and Metal-surfaced Collapsible Reflector 7/6

EIGHT OUT OF TEN

PAILLARD-BOLEX PROJECTORS

sold are purchased by those who have previously
owned machines of other makes, thus proving that

PAILLARD-BOLEX PROJECTORS

are sought by the connoisseurs.

FOR RELIABILITY OF PERFORMANCE THEY ARE UNEQUALLED

The Model G. 916 for both 9.5-mm. and 16-mm. films incorporates a specially designed mechanism, ensuring the maximum amount of screen illumination as distinct with light intensity inside the lamphouse. When fitted with a 500-watt lamp and a mechanism equivalent to a three-bladed shutter permitting of projections at really slow speeds without flicker, the screen intensity is no less than 250 LUMENS—the highest yet achieved.

PRICE: with 500-watt lamp and resistance for all voltages **£49 10s.**
(Other models from £24)

The PERSONAL touch

COLOUR YOUR OWN PHOTOGRAPHS BY HAND

WITH A **Kodak**

Soluble Crayon Outfit

It's easy! There's no need to be good at drawing; you don't even have to follow the outlines accurately, as transparent colours do not obscure them. If it does not look right at first, colour can be removed without the slightest damage to the print surface. By blending the crayons the most delicate effects are obtainable, and you can produce work which has individuality, and is really "your own."

PRICE **2/6**

Ask your dealer or write direct to:—

KODAK LIMITED · KINGSWAY · LONDON · W.C.2

TRY SNAPS by FLASHLIGHT

You can make them with the same camera you had on your holidays, in your own home and without any special apparatus.

No previous experience is required. Johnson's Free Booklet "How to do Flashlight Photography" explains this most fascinating and interesting work fully. You can have a copy on application.

Get a record of some of those happy meetings or make some studies in your own home.

Send P.O. for 1/- for box Johnson's FLASH-POWDER with instructions, sufficient to make 10 Exposures with an ordinary box or roll-film camera.

USE THE

"KINOX" CINÉ PROJECTOR

FOR RELIABLE PROJECTION . . .

The KINOX is the latest development in design of 16-mm. high-class projectors. The mistake of following theatre machine construction in an instrument designed for amateur or club purposes has not been made in the Kinox. It is self-contained in suitcase form, and when out of use the whole of the mechanism, including the lamp, is contained in its housing safe from damage, dust or dirt. The projection lens has an aperture of $f/1.4$ and the definition is typical of Zeiss Ikon superiority. To give an idea of the intense illumination it is necessary only to say that screen pictures of ample brilliancy are possible up to 13 ft. wide. Threading and all operations are easy and convenient, and the films are rewound by motor.

Supplied in two models :

Model A, with 250-watt lamp, and Model B, with 375-watt lamp.

KINAMO

. . . and the Kinamo for Taking Dependable Home Movies

The KINAMO is an instrument of extreme precision without being complicated. Indeed, it is as simple to operate as an ordinary roll-film camera, and the weight, $2\frac{1}{4}$ lb., very little heavier. The dimensions, $4\frac{1}{4} \times 3\frac{1}{2} \times 3\frac{3}{8}$ in., prove its remarkable compactness. It is the smallest 16-mm. ciné camera extant. There are two models, the Kinamo S10, with fixed-focus Zeiss Tessar $f/2.7$, and the Kinamo KS10, fitted with Zeiss Sonnar $f/1.4$ in interchangeable mount so that other lenses of varying focal lengths can be attached.

DIABOX for $3\frac{1}{4} \times 3\frac{1}{4}$ Lantern Slides

The Zeiss Ikon DIABOX is a portable optical lantern for lantern slides. The illustration depicts the instrument opened out to show internal construction. For storage and transport the lamp-house and the lens are returned to their appropriate places inside the box, and the whole apparatus is then self-contained and can be carried about in the same manner as a small suitcase. With 250-watt lamp satisfactory screen pictures up to 10 ft. wide can be obtained, and with 500-watt lamp as large as 14 ft. Dimensions, $16 \times 10 \times 7\frac{1}{2}$ in. Weight, 18 lb. The equipment includes triple condenser, concave mirror, lantern anastigmat, 14 in. standard focus, but any focus between 10 in. and 18 in. can be supplied if required, and projection lamp.

VOL. LXXVIII. No. 2399.

ENTRIES for our Annual Lantern Slide Competition close to-day (Wednesday, October 31st), although packages arriving by first post to-morrow will still be considered. After that, however, it will be too late, as the judging will be proceeded with immediately. The bookings for the prize slides have been unusually heavy this year. There are only a few vacant dates between the end of November and May of next year. Hon. secretaries of societies who have not yet applied for the set should hasten to do so, but must send alternative dates. We will fit them in if it is at all possible. There is every evidence of a revival of interest in lantern slide and projection work at the present time, and this Lantern and Ciné Number of "The A.P." will, we hope, still further increase that interest.

Lantern Slide Cover-Glasses.

A photographic society lanternist, who handles many hundreds of slides every lecture season, is of opinion that amateur makers of slides do not pay sufficient attention to the quality of the glass used for covering the slide. He says that a set of one hundred slides made by an experienced worker is often no heavier than a set of sixty or seventy slides made by an amateur, because of the thickness of the covering-glasses. Many slide-makers clean the emulsion from faulty slides and use the glasses for covering good slides, but some there are who cut up old quarter-plate negatives for covers, and the difference between the thickness of lantern plates and old negatives is very pronounced. When old negative glasses are used it is a good plan to use only the lightest. The average thickness of a serviceable and proper covering-

TOPICS of the Week

"THE FIFTH."

An article on Firework Photography appears on another page in this issue.

glass is twenty to the inch, and as modern dry plates of the best make (quarter-plate) average twenty to the inch, such glasses may serve. Quarter-plates made a generation or more ago, however, are often from twelve to fifteen per inch, hence their weight and bulk when made into cover-glasses. Cover-glasses of commerce are of eight different thicknesses, viz., 14, 16, 18, 20, 22, 24, 27 and 30 to the inch, ranging in price from 3s. 6d. to 12s. per gross. While all thicknesses have their uses, even the 14 and 30 to the inch, the 20 size is perhaps the most popular and serviceable.

Stained Lantern Slides.

A recent enquiry and reply anent stained lantern slides developed with a hydroquinone developer reminds a correspondent (an old photographer) that a generation or more ago it was customary for certain people to advertise the sale of so-called secret formulæ, and one of these was a remedy for stained slides. The use of hydroquinone was suggested by Sir William Abney in 1880, but it was not possible to bring it into use at that date owing to its expense, and some years passed before photographers were able to buy it very cheaply. Hydroquinone proved to be an excellent developer for lantern slides, but at times it was found to stain slides very badly, and the secret remedy had a big sale. Forced or prolonged development of slides, even to-day, may result in yellow-stained pictures, and the so-called secret remedy or trade secret is worthy of a trial. The plan (which is no secret to-day) is to dissolve a few grains of permanganate of potash in cold water, enough of each to make a solution pale pink in colour. The well-washed hydro-

quinone-stained slide is simply immersed in this weak permanganate solution and allowed to remain until the stain disappears, the slide is then washed in plain cold water and dried. In most cases, but unfortunately not in all, the treatment is effective.

A Primary Light Standard.

Those able pioneers Hurter and Driffield had a memorial lecturer after their own heart last week when Dr. J. W. T. Walsh, of the National Physical Laboratory, discoursed on light standards ancient and modern. It was rather astonishing to be reminded that the candle remained the light standard in this country until almost the end of the last century, and that Hurter and Driffield themselves carried out their classic work using a sperm candle as the standard. In Germany the Hefner lamp had come along a few years earlier. Dr. Walsh described some work recently done by four researchers at the Bureau of Standards, Washington, whereby a primary standard reproducible from specifi-

cation will presently be established. There is already an international standard of illumination (used by practically all countries except Germany and certain German-speaking countries), and the unit is maintained in all the principal countries to an accuracy of about one-tenth of one per cent, which is sufficient for commercial and most scientific needs. But at the same time there has been up to now no primary standard reproducible from specification whereby the unit could be re-established should all the units in the different countries, by some strange chance, undergo destruction, or, what is more within the bounds of probability, suffer serious diminution of candle-power with lapse of time. The new primary unit will consist of what physicists call a "black body," a tube of fused thorium supported in a crucible filled with platinum. High temperatures are applied, the platinum being slowly raised to melting-point—something of the range of 2,000 absolute units—and the visible brightness obtained simply as a

result of the temperature is determined as the standard. Experiments on this form of standard are now in active progress in all the chief standards laboratories, and it may be confidently expected that within the next few years there will be available a real primary standard.

Radiography as a Calling.

Attending the annual dinner of the Society of Radiographers the other evening, we were impressed by the number of ladies who are taking up that calling. The majority of radiographers appear nowadays to be ladies. Their dainty fingers are well employed with the X-ray tube and the plates and the intensifying screens. They are not, of course, medical people, though they are employed in hospitals and elsewhere under medical supervision, and all have passed an examination. There is a great field for it, too, not only in human but in veterinary medicine. One of the speakers at the dinner told us that he had accomplished the task of obtaining an X-ray negative of an entire elephant.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Clouds in Lantern Slides.

I have been trying, with fair success, to introduce clouds from another negative when making lantern slides. My trouble is with clouds showing through other objects. I know there is a dodge for having the sky on another plate. Can you give me a hint or two about it?

J. S. K. (Cardiff.)

There is no disguising the fact that the introduction of clouds is a much more difficult operation in the case of a lantern slide than in the case of a print. With the latter a little handwork on the print may easily remedy any defects and shortcomings; with the former this may be considered out of the question. Further, the slide will be enormously enlarged on the screen, and every defect thereby exaggerated.

We will consider a difficult case—one in which a white or very light building rises up against the sky beyond. If we can deal with this, we can deal even more easily with other objects, such as trees and distant hills.

It must be remembered that the sky in the "landscape" slide will most likely require clearing. Any sign of existing clouds, or even a slight tone in the sky, must be removed if the introduced sky is to be satisfactory. This can be done by holding the slide upside down and applying a reducer with a soft brush or cotton-wool. The solution will then run downwards over the sky, and not over the landscape. The Howard Farmer reducer (hypo-ferricyanide) is suitable, preferably in rather weak form.

A plan that has been advocated is to develop, fix, wash and dry the landscape slide, and put this in contact with the second plate to act as a mask while printing the clouds. There are several objections to this. It applies only to projection (not contact work). The white house will not act as a mask at all, and the clouds will print (and afterwards show) through it.

And there is a difficulty in getting accurate registration between the two plates, even although they are face to face.

The better course is to make the landscape slide first, and then make the cloud slide, vignetting it off so that the lower part overlaps the landscape. In this condition the overlapping would of course be visible.

Therefore the next step is to remove those parts of the sky that overlap the landscape. Dry the glass side of the sky slide and hold this and the landscape slide together, back to back, with the edges exactly registering. Again with a reducing solution and a soft brush, remove the overlapping parts of the sky. In this case the slides are held the right way up, and must be looked through at right angles, and not at all sideways, while the work is being done.

The white house can now be cleared by careful and gentle work with the brush, and here and elsewhere great care must be taken not to run out into the parts of the sky that are to show, or a light outline will be visible around the landscape sky-line. The slide should be rinsed under the tap at intervals, surface water removed, and the glass side dried before resuming operations.

Make sure that the lighting of the clouds is correct for their reversed position.

With warm-toned slides the exposure for landscape and clouds must be so adjusted that the two plates can be developed together for the same time, or there will be a difference in colour between the landscape and the sky.

These are briefly the operations necessary, but some practice is required before perfect results can be obtained, and there will inevitably be a certain waste of material, especially in arriving at the correct exposures of the two plates to secure harmony of tone.

October 31st, 1934

The LANTERN LECTURE (I)

FROM THE
LECTURER'S
SIDE.

With the lecture season at hand the following article should be read by every reader of "The A.P." who has been asked to give a lantern lecture and is preparing to face an audience for the first time.

THE lantern lecture shows no signs of falling off in popularity, if one may judge from the winter activities of the photographic societies. It has been said that the Englishman dislikes being lectured to, just as much as the American appreciates it. Apart from this, the lantern lecture still attracts, especially if the subject is of general interest and the slides which illustrate it are of good quality.

At the present time of the year there are doubtless many members of photographic societies who have been prevailed upon to give a lecture during the coming season. The beginner should never refuse an invitation of this sort; it will give him a start in a congenial atmosphere.

The Subject.

This should be one with which the lecturer is personally conversant. It is possible to give a lecture on almost any subject by means of works of reference, but while the facts may be accurate, and the presentation faultless in every way, such a lecture would lack the appeal of one given as the result of personal knowledge and experience.

Given a knowledge of the subject, great care should be taken in its preparation. If the subject is a technical one it must be presented in a popular manner, so that those who have no technical knowledge will be able to understand and to follow the lecturer's remarks. If it is necessary to use technical terms they should be explained, if possible, by means of a slide. The latter will make the point clear at once, and there will not be any need of further explanation.

Whatever the subject, be it a descriptive journey through interesting or historic country, or the story of some engineering undertaking, the first step is to secure the slides. The lecturer will be limited by what is available in this respect, and if the photographer has not

enough of his own, he should secure those necessary for a continuous account from some other source of supply. There must be a connected sequence in the slides. To attempt to deal with some aspect of a subject, and to apologise with regret that the lecturer has no slide to show, is a confession of failure that is sufficient to kill the effort from the start.

The Lecture.

It is a good plan to arrange the form that the lecture is to take under headings, and then to arrange the slides in their order. The slides should be consecutive, and an aspect of the subject once dealt with should not need further reference. The lecture may be written out in full, so that the lecturer may decide what he is going to say about each slide. In this way there need be no overlapping of details, which results from lack of attention to details in the preliminary stages of the preparation of the lecture.

Opinions are divided as to the effectiveness of the read or extempore lecture. There is no doubt that the latter is the more convincing, but very few lecturers venture to dispense with notes, unless they have a full knowledge of the subject and considerable experience. For the first time it is well to depend upon MS., and if the lecturer decides to dispense with this, it is a comfort to have the written script to hand should the memory fail.

After a little experience the lecturer should be able to dispense with notes; the appearance of the picture on the screen should bring to mind what is to be said about it.

The Delivery.

With regard to the actual delivery of the lecture there are one or two points that should have attention. Those who are not familiar with public speaking are likely to have an attack of "nerves," but this should be resisted. The

speaker should face the audience, and when speaking the chin should be kept off the chest. When pointing out some feature of the picture on the lantern screen, the lecturer must beware of the common fault of addressing the remarks to the screen, with the result that those at the back of the hall are unable to hear a word. The secret of successful public speaking is to speak slowly and deliberately, pronouncing each word distinctly.

The lecture should start with a slide, and there should always be a picture on the screen. If the explanation takes several minutes, the slide may be changed for that of another version of the same subject, from another angle, and in this way the interest is held.

The lecturer should be very careful to see that his slides are in the correct order. His signals for changes of slide should be prearranged with the operator, and given with deliberation. Mistakes in this direction are trying to both.

The Time of the Lecture.

Opinions differ as to the time that should be occupied by a lecture. Much depends upon the lecture, its quality, and also upon the ability of the lecturer. Generally the ideal is a few minutes under the hour. Even the most enthusiastic audience becomes a little tired after that. It is better to finish while there is still a taste for more, rather than to give too much.

In General.

It is the custom of many photographic societies, and a very good one, to arrange "lecturette" evenings. These provide an opportunity for those who have insufficient material, or are indifferent of their powers to fill an entire evening, to co-operate with their fellow members. It also provides for the inexperienced to make a first attempt, with others, in the friendly atmosphere of their own club.

The LANTERN LECTURE (II)

FROM THE LANTERNIST'S SIDE.

In the following notes a straight talk to the lantern operator is given by an experienced worker. Many points of practical value to the Club lanternist will be found in this article.

DURING the winter session your club or society devotes a large proportion of its meetings to lantern lectures; if you, as lanternist, do not present these evenings efficiently you are robbing your fellow-members of some of their yearly subscriptions. The writer, who has had some experience both as lanternist and lecturer, has seen examples which were not only a disgrace to the club concerned but an insult to the lecturer. There is no excuse for this!

As a lanternist, "make a job" of your job, become enthusiastic, and remember that the club that makes a success of its lantern evenings stands a better chance of getting the best lecturers, who, as a rule, are not concerned so much with numbers as with the quality of the presentation and care of handling of their slides.

A perfect lecture consists of three things: a good lecturer, an attentive audience, and a good lanternist—so it's up to you! The hints and gadgets described below have all been tried out in the writer's club, and are of proved practical value. How then to arrive at this 100 per cent lantern lecture—it requires a certain amount of trouble, but will be well worth it.

First, before any lecture, thoroughly overhaul the lantern, clean the lens (both faces) and the condenser—remember it has four faces. See that the only light getting out of the lantern gets out through the slide and lens, any getting away in any other direction is wasted, and will tend to spoil the picture on the screen. A little black-lead rubbed on the grooves of the slide carrier will make it slide easily and without jolting the lantern, while two pieces of "Sorbo" rubber glued in the grooves will allow the slides to "fall softly" when placed in position.

Get all your setting up and focussing done before the lecturer arrives. Having once found the position of the lantern in the meeting-room, mark it so that it is a simple matter to replace it on future occasions. A small scratch on the tube will fix the position of the lens sufficiently near to enable the final adjustments to be made with the thumb-screw.

Make a focussing slide of your own, one that can remain in the light of the lantern without coming to harm from the heat. This can be made as follows:

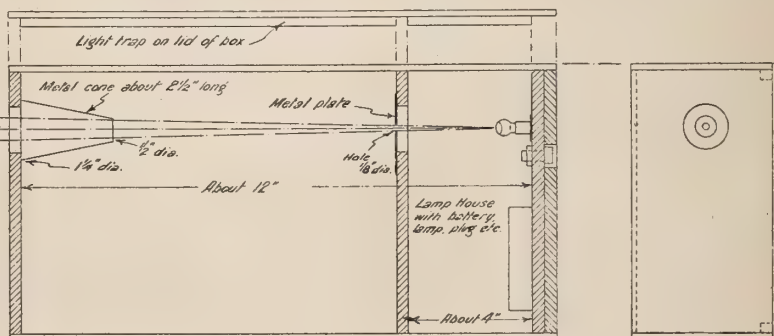

Fig. 1.

equally important, see that it is kept so. An excellent screen which will reflect almost all its light can be made quite easily. Build, or have built, a frame of 2 x 2 quartering with one cross-bar in the middle of a size 6 in. bigger all round than the largest picture your lantern will throw, cover this with "Beaver Board," butting the joint on the cross-bar, cover the joint with paper with "feathered" edges and give the whole a coat of "white undercoat"—a matt paint.

The ideal to aim for is the effect that the lecturer is changing his own slides, and any signalling device that makes a noise prevents this. A signalling lamp as shown in Fig. 1 will solve this problem; with it only the two parties concerned know when the change will take place. This lamp works on simple lines—the "centre line" is pointed towards the lanternist, the light from the 4 1/2-volt pocket lamp issue as a narrow beam and can only be seen by those in its direct path. Placed at the side of the screen, it allows the lanternist to enjoy the pictures as well as the remainder of the audience.

To see one slide chase another across the screen or one diffusing into the next detracts from the spoken word as much as the noisy signal does; much the best thing to do is to "black out" while the change is taking place.

The gadget shown in Fig. 2 is simple and effective—a pair of doors actuated by a bell-crank lever, and mounted about half an inch from the front of the lens, with a width half an inch larger over all than the lens. A flick one way and the slide is "blacked out," the carrier pushed over, and a second flick in

DALLMEYER

for Amateur Cinematography

VICTOR CINÉ CAMERA

with battery of Dallmeyer lenses.

Model V Camera, 5 speeds, SLOW MOTION and BACK TURN, Visual Focusing, Turret Front, and all latest refinements.

Price £50 with Dallmeyer 1-in. f/2.9 Triple anastigmat. Immediate interchangeability of lenses.

Dallmeyer—Pioneers and Inventors of the Telephoto Lens—provide no less than 15 Telephoto lenses, ranging in focal lengths from 3 to 12 in., with apertures from f/3.3 for Amateur Ciné

Cameras. Magnifications from 3 to 12 linear, 9 to 144 times increase in area. Standard stock lenses fit Victor, Filmo, Auto-Kinecam, Cine-Nizo, etc. Special models supplied for Cine—"Kodak," Agfa, etc., etc. Prices from £7 10 0.

DALLMEYER TITLING OUTFIT

Has no equal, provides every conceivable type of title, straight, trick, running, fades in and out, etc., etc. Complete with 400 letters. Price £8 8 0 Suitable for all makes of cameras, 8-mm., 9-mm. and 16-mm.

The Dallmeyer Rewind is beautifully made, and operates in the same direction as the film is wound, simplifies rewinds and splicing. Mounted on oak board 32 in. long.

Dallmeyer Rewinds only, on oak board.....£2 0 0
Craig de Luxe Rewind " " ".....£3 3 0
Craig Junior Rewind " " ".....£1 5 0

RAPIDITY
VERSATILITY**

Particulars "R.II" from all high-class dealers, or direct from:—

E. LEITZ (LONDON), 20, MORTIMER STREET, W.1

the opposite direction and the next picture is on the screen. Small rubber stops at the ends of the throws will enable the movements to be done smartly, which gives the best effect.

The gadget shown in Fig. 3 helps a great deal towards the 100 per cent lecture. This slide-holder when made to the dimensions given allows the slides to be handled by the edges at all times, removing the risk of "finger marks."

When the lecturer arrives get hold of him and his slides, retire to a quiet corner, chat to him, tell him about your "black-out," signalling lamp and so on, take his slides and

then place the last slide, face upwards, spots to the back, in the partition marked No. 1, filling the partition before proceeding to No. 2, and continue until the first slide is reached. Each partition will take about 20-25 slides.

After the slide has been through the lantern place it face downwards, spots to the back, in the empty partition No. 5, continuing to fill each partition with used slides until the end. The lecturer's slides can now be returned to his own box, in order and the right way up and free from finger-marks.

Ask him to signal the change about six or seven words ahead, answer it quickly and you should be somewhere near your 100 per cent lecture.

If it is possible, particularly in small meeting-rooms, use a "focus light" in preference to an arc; it is easier, cleaner, and what is more important—silent. After all, it is the lecturer you want to hear, not the lamp.

Just a final word: should the lecturer forget to thank you in his remarks, take it as a compliment; he forgot you were there, and that is the hall-mark of a good lantern-ist—to be neither seen nor heard, but to be known by his good works only.

S. A. C.

Photographing Fireworks

A Topical Note. By R. W. NEWBY.

TO those photographers who carry on their hobby throughout the year and do not, at the close of summer, put away their cameras for a long period of hibernation, fireworks offer a type of subject which can yield most unusual and striking results, both for prints and lantern slides. A good slide of a brilliant firework display makes a most impressive effect on the screen.

Firework photographs are not difficult to take as they virtually photograph themselves; nor is expensive apparatus necessary; even a simple box camera with largest stop of $f/11$ is capable of yielding satisfactory results, provided a fairly fast film is used.

During the coming week, and especially of course on the Fifth of November itself, opportunities will abound for the photographer to try his hand at this fascinating form of night photography. Although the large public displays, with their elaborate rockets and set pieces, make more impressive subjects—and incidentally easier ones to photograph—than the small homely shows that will be held in countless back gardens all over the country on Guy Fawkes' night, the latter may with care be made to yield some surprisingly good results.

Whichever type of subject is being attempted a tripod or other firm support for the camera is an absolute necessity. When setting up the camera choose a position such that the wind is not blowing towards the front of the camera, but rather to one side; the smoke will then be blown across the picture, which will add considerably to the effect.

At large displays stand well back from the fireworks in order that the whole of

each item may be included in the picture. Generally speaking, when photographing rockets better results are obtained if some foreground is included as well as the rocket burst, than if photographs of the bursts alone are taken with the camera pointing upwards at the sky. Before making any exposure, watch the first few fireworks in the view-finder, and adjust the levelling of the camera. It may be found necessary to go farther

A burst of Roman Candles.

back in order to include the whole of the firework in the picture, or to move to one side to avoid an obstruction.

Time exposures are, of course, required. For box cameras set the lens at full aperture (which in most cases is $f/11$) and use a super-sensitive panchromatic film. If your camera has a faster lens make sure of a full exposure by using $f/8$ with a panchromatic film, or if you prefer to use one of the double-coated "chrome" variety of films, these will be found to give very satisfactory results at a stop of $f/5.6$. If plates are being used they should be "backed" in order to prevent halation. A small pocket electric torch, to facilitate changing plates or winding on film, will be found to be an invaluable accessory on night photography expeditions.

When photographing "back-garden" shows, where the camera is quite near the subject, it is important to see that it is focussed correctly. Short exposures only, of one to two seconds' duration, should be given for the brighter items such as Mount Etna cones or Roman Candles.

The Guy Fawkes' night bonfire which winds up most private family displays can also make an excellent photographic subject. Get people to stand or sit round it in a circle, making sure that you have several big people in front shielding the camera from the direct light of the fire. Bank it with leaves to produce quantities of smoke and then throw on some brilliant firework such as a magnesium star shell, which gives an intense white light, and get your people to pose motionless while you make an exposure of three to four seconds.

THE production of lantern slides offers an interesting and simple autumn and winter task for the amateur, and is a convenient way of showing the best pictures taken during the preceding year in a form that will prove an untiring evening entertainment on a number of occasions.

For projecting pictures through a lantern a standard size of lantern slide $3\frac{1}{4}$ in. square has been adopted. Positive transparencies in this size are produced by various methods, and bound up with a plain piece of glass (cover-glass) as a protection to the film when being handled.

Slow emulsion plates, known as lantern plates, are sold for the

In this article an outline of practical slide-making is given for the benefit of those readers who have not yet attempted this form of photography

LANTERN

3.—Making a slide by copying by daylight

1.—Contact slide from a small negative.

purpose, and with a speed of about 5 H. & D. they can be handled in a similar way to ordinary bromide paper in orange light in the dark-room. Slower varieties of lantern plates are treated like gaslight paper.

2.—Slide by enlargement from portion of same negative.

Slides by Contact Printing.

In the most simple form, lantern slides are made by contact printing. The procedure in brief is as follows:

The lantern plate is placed in a printing-frame behind a negative, film to film, and exposed to a bright light for a few seconds. It is then developed in any standard developer,

5.—Contact slide from part of large negative.

6.—Slide by reduction from same negative.

although the formula given by the makers, and usually printed on the lid of the plate-box, can be relied upon to give the best possible results. The extent of development is judged by the surface appearance of the image on the plate, and is

4.—White-card reflector outside window to illuminate negative evenly.

carried a little farther than for a print.

After fixing in hypo in the same manner as a negative, the slide is well washed, hardened in a weak

SLIDES

and How to Make Them

By *BERNARD ALFIERI, Jun.*

solution of formalin, or chrome alum, to toughen the film and to ensure it withstanding the heat of the lantern light, after which it is again well washed, and, when dry, bound up passe-partout fashion with a cover-glass.

copying and other jobs in addition to lantern-slide making.

This same method can also be used as a means

7.—Copying an enlargement to make small negative for contact slide.

8.—Printing a number of negatives on lantern plates by contact with one exposure in a large printing-frame.

As, however, all negatives are not the correct size or convenient for contact printing, it is often necessary to make the slides either by enlargement or reduction. This is a simple matter with an enlarger, but there are other means of obtaining the same result.

Slides by Enlarging.

With some subjects, such as that shown in Figs. 1 and 2, it may be considered necessary to enlarge. If a properly equipped enlarger is not available, the negative can be fixed to a window with strips of gum paper as shown in Fig. 3, and photographed directly on to a lantern plate by daylight. A plate camera with a long extension will be required in order to get the image big enough on the plate. Every keen amateur will be well advised to secure a second-hand quarter-plate focussing camera with long extension. They can be picked up very cheaply and will prove useful for a variety of

of reproducing in same size, or for reduction, although naturally it would not be necessary to go to this trouble if a contact slide would do.

In order to ob-

of 45 degrees as shown in Fig. 4. This will reflect the light on to the negative. The exposure can only be determined after one or two trials, as the quality of daylight varies.

Apart from small negatives that have to be enlarged by reason of their size, the reverse may be the case, and reduction becomes necessary.

9.—Exposing a number of lantern plates simultaneously. The plates are clipped to the negatives and backed with card if printing-frames are not available.

tain even illumination all over the negative that is being photographed, it is a help to fix a piece of white card on the outside of the window, bending it approximately to an angle

If the negative is on film, it is held flat in position on a piece of plain glass. This applies both to contact printing in a frame and also when the film is used in an enlarger.

Making Slides by Reduction.

Figs. 5 and 6 show a subject where reduction is an advantage, and this is done by photographing the negative on to a lantern plate in the same way as described for enlarging. When the negative is not available, the slide can be printed by contact from a copy negative obtained by photographing a print or enlargement as shown in Fig. 7.

Making Slides in Quantities.

Sometimes a number of slides are wanted quickly—as for a lecture—and there are various ways by which the production can be simplified, particularly if the negatives are suitable for contact printing.

One method is to place a number

of negatives on a piece of plain glass in a big printing-frame, and expose them all together, as shown in Fig. 8. Another way is to load a number of small printing-frames and arrange them round a central electric light. When this is switched on all the plates are exposed simultaneously.

If a quantity of printing-frames is not available, a satisfactory alternative is to clip a lantern plate between each negative and a stout piece of cardboard with wooden pegs as shown in Fig. 9. To ensure perfect contact, it is a good plan to put a pad of soft paper or cloth between the cardboard backing and the lantern plate, and if the former is

a light colour, a piece of black paper should be placed immediately behind the plate.

The negatives are sorted up into about three grades, "thin," "normal," and "very dense." A trial exposure is given to one of each batch, and then, providing the light is constant, it is an easy matter to make the exposures in bulk with reasonable certainty.

After exposure, they can be developed, all together, in dilute developer in a tank. By this means several dozens of lantern plates can be exposed, developed, washed and put to dry in an evening sitting. When dry they are ready for masking, binding and spotting.

"The A.P." Monthly Competitions

PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers.
FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10x8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6x4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are despatched on the fifteenth of the month following the announcement of the awards.

The closing date for the November competition is Friday, November 30th.

AWARDS FOR SEPTEMBER.

Harehills Lane, Leeds; "The Last of the Sun," by F. Annis Burrows, Enisan, Hill Rise, Chalfont St. Peter, Bucks; "The Warning," by W. G. Kennings-Kilbourn, Kenlyn, Abbey Road, Chertsey, Surrey; "Cherry Blossoms," by John Muller, 53, E. 182nd Street, N.Y.C., N.Y.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2, and Class 3, respectively.

Those awarded Honourable Mention are as follows: W. J. Allam (London, E.C.); G. C. Backhouse (Leeds); Hubert M. Bond (Woking); Arthur C. Bundock (Merton); C. Wynne Chester (Dartmouth); J. H. Clark (Camberwell); Marjorie I. Dean (Yateley, Hants); R. C. L. Herdson (London, S.E.); (2) Ward Hutchinson (London, N.W.); (2) Wm. Jackson (Hull); Sorab J. Kharegat (Bombay); Miss G. Pennethorne (Haywards Heath); C. Peters (Redruth); J. Hinton Read (Fife); Raymond Ryan (Cape Town); G. A. Slight (London, S.E.); W. J. Smale (Lynton); A. James Soye (Belfast); Major Steevens (Switzerland); A. R. Turpin (London, N.W.); R. B. Whitehead (Quebec); L. C. Williams (Tamworth, N.S.W.); E. Roper Yerbury (Edinburgh).

INTERMEDIATE SECTION.

FIRST PRIZE.—"The Desert's Guardian," by Yahya Arif, 8, Rue Ismail Pacha, Garden City, Cairo, Egypt.

SECOND PRIZE.—"At Sunset," by R. C. Jude, 2, King's Road, St. Ives, Hunts.

CERTIFICATES OF MERIT.—"Sand Boys," by H. O. J. Bedgood, 3, Stanley Street, Blyth; "The Spent Sea," by D. B. Kinahan, Meadow Mead, Limes Avenue, Horley, Surrey; "Thrills," by Norman S. Shaw, 33, Park Avenue, Golborne, Warrington; "Reflets Matinaux," by Miss J. White, Villa Lussy, Montreux, Switzerland.

BEGINNERS' SECTION.

FIRST PRIZE.—"The Cottage Staircase," by John Giddings, 8, Smyth Road, Ashton Gate, Bristol, 3.

SECOND PRIZE.—"The Old Order Changeth," by L. Abrams, 140, Elm Grove, Southsea.

CERTIFICATES OF MERIT.—"Low Tide," by A. Aubrey, 21, St. John Street, Rochdale; "Selworthy," by H. G. Jude, 2, King's Road, St. Ives, Hunts; "Leashed," by L. L. Morgan, 15, Dysart Terrace, Newtown, Mont.; "The Lych Gate, Penshurst," by F. B. Swaine, 1, Park Farm Cottages, Limsfield, Surrey.

THE high standard of the competitions has been well maintained, and this is particularly noticeable in the Intermediate Section, where prints of remarkable quality have been entered, some of which would undoubtedly have scored in the Advanced Workers' Section. In the latter section, however, the standard on this occasion was higher than ever, and the entries were so good that the awards had to be increased. In all sections the number of entries has been on the up-grade for some time, showing a continued interest on the part of our readers. The awards are as follows:

ADVANCED WORKERS' SECTION.

FIRST PRIZE.—"Re-toucher," by C. Peters, 46, Fore Street, Redruth, Cornwall.

SECOND PRIZE.—"Harvesting," by T. F. Holdsworth, 19, Clifton Place, Wakefield.

THIRD PRIZE.—"Respite," by Denis Whitlock, 44, Scotts Lane, Shortlands, Kent.

MOUNTING PRIZE.—"Electro-welding," by Oliver Ormerod, 30, Rocklands Avenue, Bebbington, Near Birkenhead.

CERTIFICATES OF MERIT.—"The Cod and Lobster, Staithes," by G. C. Backhouse, 16, Sandhurst Grove,

Lantern Slide Hints and Formulæ

We give below a selection from hints given from time to time on lantern slide matters, so that they may be handy for reference.

DIAGRAM SLIDES.

IN skilled hands good pencil drawings can be made as lantern slides by the following method. They may be lettered titles, diagrams, or artistic sketches. Do the work with a suitable lead pencil—or pencils—on a piece of finely-ground glass of lantern-plate size. When finished, flow over it a coating of dammar or celluloid varnish. This removes the matt effect of the glass and protects the pencil work. Bind up with a cover-glass as usual, taking care to spot the slide so that the subject appears the right way on the screen.

PRESERVING SLIDE BINDINGS.

The life of the binding strips on lantern slides will be greatly prolonged by the following treatment. In a small dish pour some negative varnish to a depth a little more than the width of the binding. Dip one edge of the slide into this, drain, and set aside to dry. All the four edges are treated in this way. The strips must be thoroughly dry before the work is commenced, and it is best to make the edge quite warm before immersing it in the varnish.

DISTANCE OF LANTERN FROM SCREEN.

The focus of the lens of an optical lantern being known it is easy to calculate the distance the lantern must be placed from the screen so as to get a disc of a given diameter. Take the diameter of the required disc in feet, multiply by 4, and add 1. Multiply the number so obtained by the focal length of the lens, and it gives the required distance in inches.

Example: Focal length of lens = 6 in.; size of disc required = 10 ft. Then $10 \times 4 + 1 = 41$; and $41 \times 6 = 246$ in. = 20 ft. 6 in.

SPOTTING SLIDES.

The term "spotting" in connection with slides is generally understood to refer to the marking of the slide as a guide to the

lanternist in putting it the right way in the carrier. But a slide sometimes requires spotting in the same way as a print. This is a delicate operation, and unless very carefully handled the blemish will show on the screen. It is necessary to use a strong magnifying glass, and the best method of spotting is to take a very fine sable brush and apply tiny touches of transparent colour of the kind used for tinting slides. Any colour can thus be matched. The brush must be very lightly charged—as dry as it is possible for it to be, consistent with the colour adhering to the slide.

POLISHING COVER-GLASSES.

If a cover-glass is held in the hand for polishing it is difficult to deal with the edges, and finger-marks may be left. A handy accessory may be prepared in a few minutes. Take a piece of stout strawboard, say 6 inches square, and glue down on to it another piece a little thinner than a cover-glass. In this second card an opening $3\frac{1}{4}$ inches square should first be cut, with a semi-circular notch at one side so that a finger-tip can be used to lift out the glass.

BLUE SLIDES.

Black-tone lantern slides can be toned to a good blue, after being fixed and thoroughly washed, by immersing them in the following:—

| | |
|-------------------------|---------|
| Water | 10 oz. |
| Ammonio-citrate of iron | 25 grs. |
| Nitric acid | 15 min. |
| Potassium ferricyanide | 25 grs. |

Wash the toned slides for about ten minutes, and dry.

LANTERN SLIDES BY POST.

It is often necessary to send by post a few lantern slides intended for competition or for exhibition purposes. They may be packed as follows. Any number up to four can be packed in a lantern-plate box, with pieces of corrugated card ($3\frac{1}{4} \times 3\frac{1}{4}$) above and below them. Enough card should be used to

prevent any movement of the slides when the box is shaken after putting on the lid and securing it with stout elastic bands. The filled boxes are then placed in a strong wooden box sufficiently large to admit of pieces of corrugated card being placed above, below, and on all sides of the plate boxes. The lid of the wooden box may be screwed on, or, better still, made to slide in well-fitting grooves. The whole is then wrapped in paper, labelled, and securely tied.

KEEPING SLIDES IN ORDER.

It is easy to check the order of a set of slides at a glance. Arrange the slides in their box, so that they are all in proper sequence, and the right way up. With a ruler draw two lines, one thick and the other thin, close together, and running diagonally along the set from one end to the other. Any break or displacement of the lines noticed subsequently will indicate slides out of place or the wrong way round.

COPPER TONING FOR SLIDES.

A black-tone lantern slide can be toned to various colours from warm black to red, according to the time of immersion in the following bath:—

| | |
|------------------------|-------------------|
| Potassium ferricyanide | 20 grs. |
| Potassium citrate .. | $\frac{1}{2}$ oz. |
| Copper sulphate .. | 25 grs. |
| Water | 5 oz. |

Dissolve the ingredients in the order given. Wash the slide for at least 15 minutes after toning, and varnish the slide when dry.

KEEPING SLIDES CLEAN.

Lecture sets of slides should be overhauled after each time of using, as they often get badly finger-marked. As a rule, polishing with chamois leather is sufficient. If something more is required it is well to use a cloth very slightly moistened with methylated spirit. This is better than water, which takes longer to dry, and may affect the paper binding.

With the Beginners

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

BEGINNING CINEMATOGRAPHY.

SOONER or later a great many amateur photographers decide to take up cinematograph work; and this is not surprising, as it is extremely fascinating. As a rule, those who come to this decision have already had more or less experience of "still" work, which is all to the good.

Owing to the greater expense of ciné work the beginner should consider certain matters very carefully before launching out. Naturally, and wisely, he will decide on a sub-standard size, and his first problem will be the choice of apparatus. I do not propose to deal with this question now, except as regards one point. I am repeatedly asked whether certain low-priced outfits are "as good" as more expensive ones, and can never understand on what grounds they should be expected to be.

It stands to reason that if the cheap outfit were actually as efficient as the

expensive one, one of two things would happen. Either the cheap one would easily fetch a higher price on its merits, or the cost of the dear one would have to be reduced to meet the competition. A cheap camera and projector may give reasonably good results, though certainly not the best; and it is generally a wise course for the beginner to buy the best apparatus he can afford. The running costs are the same, and it is poor economy to be able to get only mediocre results, or to have the scope of work seriously limited by the shortcomings of the apparatus.

But what I wish to do here is to offer the beginner some advice on his choice of subjects, in the early stages at any rate; and I am well aware that many enthusiastic movie-makers will consider this advice definitely bad. The saving clause is that no one need accept it who does not choose to do so.

My firm belief, based on somewhat sad experience, is that the beginner at ciné work is far too prone to run before he can walk. He is fatally obsessed by the word "Hollywood," and all that it implies. He picks up the jargon of the professional studios with deadly ease, and is talking about scenarios, and locations, and rhythm, and worse, when he would be better employed in learning to turn out a first-rate technical film of some homely subject. When he finds himself, as he well may, taking close-ups of made-up amateurs trying to "register" facially some emotion or expression, he ought to have enough common sense to realise that he has run clean off the rails. He is on the wrong tack.

I distinctly remember the beginnings—the very beginnings—of the "movies." After the usual lantern slides, we sat in excited amazement while the "slide" on the screen actually moved. It jerked, and jumped, and flickered, and dithered, and was often obscured by a sort of luminous rain; but water moved and flowed, trees waved in the wind, vehicles made definite, if erratic, progress, and people lived and moved and had their being. When water came to be accompanied in its various movements by the swishing sound of sand in a box; and the hoofs of every horse, whether on rock, soft sand or grass, gave out the orthodox tap-a-tap, we thought that realism could no farther go.

We demand, and get, a vast deal more now. I would not suggest that the beginner go back to the crude and elementary results of the early days; but I certainly advise him to go back part of the way as regards choice of subjects.

After all, his films are not for public exhibition in super-cinemas; they are mainly for home consumption. To be frank, that is about all they are suitable for; and if he keeps his eyes on Hollywood they will not be suitable for that. Some of the very best amateur films I have seen have had for their topics the most homely of

incidents, and the characters have not been "actors," but people. Surely we often watch people, even strangers, with interest, and we may well enjoy watching them on a film when it has been managed with skill and discretion.

I have selected, almost haphazard, the photograph which is reproduced. In the distance, among other things, may be seen the home of the Royal Yacht Squadron at Cowes. The subject might well be one in a set of holiday prints or slides; but it would be "still." We can bring it to life in a short length of film. We may set our ciné camera on a tripod, so that the landscape and buildings sit appropriately still, and we can begin to shoot a moment before the

state of things shown in the print. The waves will dance and sparkle in the sun; the yacht will sail across; the motor-boat with its cloud of spray will career over the sea; and the whole thing will be realistic.

What, says Hollywood, is the plot? There is none. Where is the heroine? Drowned, I hope. All we are aiming at is a pleasant suggestion of a bit of Cowes, and if we have succeeded I certainly think that it was worth doing, and I further think that our little friendly audience will agree with me.

I will not labour the point; I shall get into quite enough trouble as it is. What it boils down to is this. Just as the ordinary photographer seeks

for interesting "snaps," so the beginner at ciné work should hunt for subjects that would be attractive as ordinary photographs, but still more so when they show movement. This point he must of course bear in mind: there must be movement. Static subjects are unsuitable for this treatment. Sometimes he will do well to pre-arrange the movements, especially with what may be called domestic subjects; at other times he will merely have to record spontaneous movements as they occur.

It may all seem humble and unambitious, but that is better than pretentiousness. I suggest this course for a beginning. What may come later is another matter. W. L. F. W.

Binding Lantern Slides

THERE are many ways of binding a lantern slide, but the following simple procedure will be found to be the quickest, and is probably the most satisfactory.

The only materials required are strips of black gummed paper which can be purchased ready cut

to size ($3\frac{1}{2}$ in. long by $\frac{3}{8}$ -in. wide), or can be cut from pieces of passe-partout gummed paper tape.

The first stage is to wet a piece of binding strip and lay it on the table, gum side up. Then take the lantern plate, and pressing it to the

Fig. 1.

cover-glass (with the mask between) stand one corner in the middle of one end of gummed paper, as shown in Fig. 1. The plate and cover-glass are carefully lowered until they are standing in the centre of the binding strip. When it is adhering to the edges, the slide is turned upside down, and the binding strip is pressed down on both sides with the thumb and first finger, as shown in Fig. 2.

This procedure is repeated with each side, and the beginner will be surprised how quickly it can be done with a little practice. If there is any difficulty about the paper sticking firmly it is a good plan, after damping the strip, to give it a

Fig. 2.

Fig. 3.

further coating of thin gum or paste, applied with a brush. Two white spots are provided on the top front side of the slide to indicate which way it is to be placed in the lantern. These are already on one out of every four binding strips sold for the purpose. If, however, the binding has been cut from plain gummed paper, they can easily be painted with a dab of white paint, as shown in Fig. 3, or spots of white paper can be stuck on.

When masks are necessary they can be bought ready-made with assorted openings, but the best way is to use strips of the black binding. These are stuck to the plate as shown in Fig. 4, before it is covered with the protecting glass. Any size opening can be constructed in this manner.

ADMIRAL
STUART
NICHOLSON.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"TO produce photographs of exhibition standard, candid criticism of one's prints is a great help. The best way of obtaining this is by joining a photographic club, or by taking part in 'The A.P.' monthly competitions, as many of my predecessors in this series have done.

"In my own case, there being no photographic club in my district, I became a member of the Camera Correspondence Club (now defunct), and obtained much benefit from the criticism of my own and other prints in the portfolios. I was

also greatly helped by 'The A.P.' criticisms of my entries in the monthly competitions. In addition, I think all keen amateur photographers should join the Photographic Convention of the United Kingdom.

"For this there is no entrance fee, and the annual subscription is the nominal one of five shillings. Each year a meeting lasting one week is held at some place interesting to photographers, either at home or abroad. The cost is very moderate. The gathering, which usually numbers about a

hundred, gives an excellent opportunity of getting to know other photographers, and of exchanging ideas on the latest developments in photography. Tours are organised each day, and plenty of time is given to secure negatives which, being an optimist, you hope may reach exhibition standard.

"This year the Convention was held at St. Malo in June, and two of the pictures I secured at that meeting were so fortunate as to be accepted for the R.P.S. exhibition. One of them, 'The Fruit Stall,' is reproduced opposite.

"Most of my work, except portraiture, is done with a Zeiss $3\frac{1}{4} \times 2\frac{1}{4}$ Super Ikonta, with a Zeiss f/4.5 lens and a Compur shutter. I have found the self-focussing range-finder of the greatest convenience, as it enables me to use the full aperture without any fear of the principal object being out of focus. With this camera I always use Selochrome films.

"For portraiture I use a quarter-plate studio camera, with a Dallon 12-in. telephoto lens, and either Ilford Auto-filter plates or Granville cut films. My smoking-room, with fairly large windows facing south, is my studio. I do not use artificial light, but my windows are fitted with Vita glass, which reduces the exposure about 50 per cent. This is a great help in the winter months.

"Practically all my prints and enlargements are done on chloro-bromide paper. Barring the necessary spotting of prints and negatives, and a slight amount of retouching on portrait negatives, my prints are all 'straight' ones. This is probably due to the fact that I am not skilful enough to print-in skies or make other drastic changes to the original negative.

"Some years ago I took up portrait photography in a small way among my friends, and devoted the proceeds to the funds of the Royal National Lifeboat Institution, as I happen to be the honorary secretary of the Bude branch of this splendid service. In the last twelve years, by this means, my camera has earned over £200 for the lifeboat cause. I venture to suggest that other amateur photographers who have some pet cause or charity which they desire to help might turn their hobby to practical account in a similar manner."

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

OF the six examples reproduced on the opposite page, three appear to have been obtained with the connivance of the models and three without. The first set have been posed and prepared beforehand, and the second are the result of selection, the subjects being unaware of the process of being taken.

Spontaneity and Choice.

All of them have a certain human interest, either as portraits or figure studies, and, while those that are posed betray the fact, it is not done in such a way that it becomes unpleasantly obvious, or so that camera-consciousness is suggested.

Neither are they without a measure of spontaneity, but it is not the same thing as the spontaneity of those that have been taken without the knowledge of the subjects; and, in a general sort of way, those examples which are posed might be said to have an advantage over the others in arrangement, and an absence of certain technical defects, while the remainder, being unposed, exhibit a greater degree of naturalness and are more spontaneous.

No. 1, "Portrait," by R. K. Pibury, for example, does what it sets out to do quite well. Presumably, it is a good likeness—and that is the first function of a portrait—while, at the same time, it has a jolliness about it that makes it attractive to people who do not know the sitter.

Insomuch, it is good, and no less excellent is the way the head is posed, and the way both camera-consciousness and self-consciousness have been avoided. On the other side, the head is somewhat large for the picture space; there is a certain amount of distortion consequent upon the proximity of the camera to the sitter; and the lighting, if falling in the right direction, occasions a measure of harshness and lack of modelling because it is rather too near.

Lighting and the Subject.

These are defects that arise from inexperience. Their indication suggests the remedy, but, as far as the lighting is concerned, not only should it be placed at a greater distance, but it would also be advantageous

if the source were diffused a little.

One thickness of muslin, tracing paper, or other suitable material should be quite enough, and its effect would be seen in a higher degree of roundness in the modelling. The edges of the shadows, too, would not be so abrupt, and, following upon the slight dispersal of the illumination, the shadow side of the face would get just a shade more light and its contours would be more finely displayed.

In this respect, No. 3, "The Book," by J. Moore, is better, for the modelling of the features is beautifully retained. It is somewhat of a pity that the child's dress towards the bottom of the picture is so light in tone, and, while it is easy to be wise after the event, the portrait would have been incomparably better if a shade of some sort had been interposed between the light and the dress so as to reserve the brightest light for the face.

Posing and Arrangement.

Posing and arrangement are as good in this instance as in the other, and, if the former shows a greater joy in life, the mood of childish absorption here is no less intriguing in a different way, and quite as interesting.

The perspective, on account of the greater distance between sitter and camera, is more natural, and the absence of awareness of the process of being photographed no less marked. The setting is commendably plain, and the work, regarded as a whole, is distinctly promising. Somewhat similar remarks are applicable, again, to No. 6, "Eric," by Lillian F. Thomas, except with regard to the setting, which unfortunately betrays the method by which it was contrived.

The folds are rather a drawback, and another thing that is not altogether satisfactory is the suggestion of stiffness arising from the stretched-out legs and the angle at which they are seen. Had one been bent, it would have looked more comfortable, and, consequently, would have been more satisfying to contemplate. In other respects—lighting, pose, and arrangement—there is little to criticise, and the perspective seems free from fault, but it is quite as clear that neither of them is quite so

spontaneous and entirely natural as, for instance, No. 2, "Serious Business," by J. Taylor.

Here there is no hint of posing, the subjects are perfectly oblivious of the camera, and they are caught in that artless sort of way that simulates art at its best.

Figure Studies and Portraits.

Their absorption in their play is wonderfully well conveyed, and, in this respect, the picture is as good as, if not better than, any of the portraits.

It has the advantage over them in spontaneity, but, because of the lack of any control over them or their setting, its arrangement can scarcely reach the same level of achievement. That the features of the children are not shown, again, is a drawback; but, when subjects are sought by selection, it is obvious that they must be taken as they occur, and, apart from a certain choice in the time at which the exposure is made, no other control can be exercised.

Similarly with No. 4, "Rub-a-Dub-Dub," by J. Stanley Sutcliffe, the setting is not all that would be chosen if it were under control, and the figures themselves, while caught at quite a fortunate moment, are neither disposed exactly as could be wished nor are their outlines as well defined as they might be. They suffer through the effect of movement being visible.

Movement of the subject is an ever-present difficulty when work out of doors is being essayed, and, in this respect, indoor work, where the co-operation of the model can be obtained, has the advantage.

Nevertheless, a subject like No. 5, "The Leisured Class," by T. G. Corkhill, is occasionally met with, and, in a case of this kind, the lack of animation in the waiting figures enables them to be included without fear of any blurring of the image through movement. The arrangement, here, rivals that of any of the more considered portraits, and is very good indeed in its class.

It could be wished, perhaps, that the head of the farthestmost figure were visible, but, having regard to the fact that three are included, the slight defect is pardonable. "MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"AUTUMN," by G. L. Hawkins.

A FEATURE of this picture, which is considerably out of the common, is the combination of two effects to form a single motive. There is, in the first place, an effect of sunshine, which is displayed upon the tree boles, and, in the second, a magnificently clouded sky takes almost equal rank.

Effects in Combination.

It is but rarely that it is possible to employ two such effects in the one picture without incurring the danger of a division of interest; but it has been done in this instance, and unity appears to be achieved partly by the fact that both effects attain their greatest power in fairly close proximity, and partly because the brilliance of the light upon the tree trunk and that shown by the cloud have their origin in the same source—the sun.

They are both manifestations of the same light, and, as will be seen, it is brightest on the tree at (1), while in the sky it reaches its maximum at (2).

Naturally, therefore, the centre of interest lies in this vicinity. Its power of attraction is enhanced by the fact that at (1) the brilliance is emphasised by the dark markings on the tree bole, and at (2) by the dark tone of the upper portion of the trunk, the contrast afforded by the darks stressing the brightness of the lights.

So much is definite, and, while there is no doubt about those points as the centre of attraction, it is somewhat curious to find that, contrary to the usual form of composition customary in subjects of the same or similar character, the position of the points in question does not coincide with those formed by an intersection of divisions of thirds.

A Departure from Convention.

The light on the tree (1) is well to the left of and lower than the nearest

of the four points referred to, while that of the cloud (2) is above and also inclined towards the left-hand edge.

If the corresponding points on the right-hand side were unoccupied, the position of (1) and (2) would be near enough to the points on the other side to give, in conjunction with the principality conferred by the light

and shade should also be enforced by power of placing, but, here, it is not; and though the departure from convention is obvious, it must be admitted that the composition does not seem to suffer. The fact of the matter is, of course, that the pull of the lights, accompanied, as they are, by darks of a not inconsiderable depth, is quite sufficient to outweigh any ordinary attraction that might be attributable to placing.

Nevertheless, although the experiment has justified itself in this particular instance, it would not be wise to assume that it could be repeated with equal success on every occasion, for it would only need but a touch more brightness in the tree trunk (3) to upset the balance entirely. Its subdued tone, despite its stronger position, prevents it from competing with the tree (1) for dominance; but, if it had either an appreciably greater weight, or were much lighter, a feeling of disunity would arise.

Liberty and Licence.

That feeling would be occasioned by the too-near equivalence of the two points of attraction, and as the print stands it represents the maximum liberty that could be taken without degenerating into licence. The balance of the two points, now, is just about right, and while the arrangement shows that the conventions of traditional composition can at times be successfully disregarded, a very nice adjustment is needed if the departure is to be justified.

Its accomplishment, now that it has been done, confers a degree of originality upon the work. It is undeniably successful, and, though its production would probably be more instinctive than arising from calculated analysis, it reflects most favourably on its author's vision and creative power. It conveys an impression of bigness and of seeing things in an impressive sort of way.

"MENTOR."

and shade, dominance as far as placing is concerned; but the tree bole (3) comes right across the two right-hand intersecting points, and, moreover, has an advantage both in respect of scale and proximity.

Supposing it were possible for the attraction of the two lights to be disregarded, the tree (3) would, by reason of its placing, proximity and size, be entitled to be regarded as the principal item, and also as the centre of interest.

It may be, and usually is, desirable that the point emphasised by the light

PHOTOGRAPHY AT NIGHT

By GEO. A. SLIGHT.

Night scenes specially lend themselves to display as lantern slides. These subjects, when projected on the screen, appear much more luminous than when seen in the form of prints.

Of all the branches of photography available, none is quite so fascinating as photography at night. At such a time, one finds ample scope for the practice of artistic arrangement, and for the patience that must eventually be acquired by the amateur who has the wish to advance in our hobby.

A beginner in night work is generally inclined to be discouraged by rain, or the thought that his lens is not of the fast and expensive variety. This makes no difference in the securing of good night photographs.

The first attempt should be staged at a fairly quiet, well-lit spot. Three negatives should be taken of the same subject, doubling the exposure each time.

In these hard times, this may seem an excessive display of affluence. Rest assured that this is not so, for from these trial exposures the would-be nocturnal photographer will learn more than from a whole book on the theory of the subject. How to obtain the best results is largely a matter of experience.

As a guide to first attempts I show here two pictures. No. 1, "A London Nocturne," was given 12 seconds at $f/5.6$. The other, "2 a.m.," was exposed for 30 seconds at $f/6$. Both were on backed panchromatic plates. For a smaller aperture lens, these exposures could have been lengthened. For ultra-rapid pan. plates they would have been much less.

Do not wait for a display of flood-lighting. The usual street

A London Nocturne.

obtained—allowing for reasonably correct exposure—are nicely graded, and with the lamps clearly defined.

The lamps in the illustrations are very conspicuous. I would not advocate their inclusion so prominently in first efforts, for the wet pavements, if present, will be found to be very luminous, and the reflections may be overlooked.

Be patient with moving traffic lights. Although, as for interiors and other long exposures, it makes no difference when people pass in front of the camera, it will ruin a night picture to have white streamers across it.

Referring once again to the illustrations, it will be noticed that in one case use has been made of the puddles; in the other, the shadows cast by the lamps have made the foreground interest.

The foreground is important. Half, or maybe more, of the picture space is occupied by it. Here, a wet pavement or roadway will amply repay one for braving the elements.

Regarding composition. What better test for composition could be found than a night study in the rain? Lamps, shadows, reflections, puddles and wet roads, all added to the picture in one fine orgy of composition.

The fascination of night photography is unquestionable, and well worth a trial. Very few such studies are seen on exhibition walls, so it has the advantage of not being overdone.

"2 a.m."

lighting will at most times be quite sufficient to make really beautiful pictures, and will look more natural.

Having made the exposures, the next inevitable step is development of the negatives. For night scenes it has been my experience that a very dilute developer works wonders. A tank is very useful. By sufficient dilution, a half-hour or longer can be taken over the process. Negatives thus

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

SPOTTING AND RETOUCHING LANTERN SLIDES.

SIR,—May I offer a useful tip to makers of lantern slides. How often one sees a good slide comparatively spoilt by the presence of pinholes and blemishes. Were it not for these the making of lantern slides would be quite simple; but retouching is a matter of extraordinary difficulty because no retouching medium will take evenly on the gelatine coating.

After some experimenting I have hit on a better method than heretofore, which may be novel to some of your readers. Naturally, the most important step is to obtain as clean a negative as possible, but even the best attempts at cleanliness are too often marred by annoying pinholes and other defects which must be eradicated before the slide is made.

Some retouching medium must be used if the job is to be done satisfactorily, but ordinary retouching varnish is not satisfactory because it is almost impossible to coat part or the whole of the surface evenly and without leaving streaks which will be greatly magnified on the screen.

The same difficulties apply to the lantern plate, for where pinholes have been filled in on the negative there are almost bound to be corresponding lighter spots on the slide and also a streaky effect due to the use of retouching varnish.

My tip is to pour sufficient alcohol (I use surgical spirit) into a dish to cover the plate and add to it approximately half a teaspoonful of retouching varnish (I use Johnson's). Well mix and let the dish stand for a few minutes to allow all dust and deposit to settle; now take your negative or lantern plate and after carefully dusting with a soft camel-hair brush hold it with the film downwards and immerse the film surface in the alcohol and varnish for a minute, then give it a flick to remove superfluous liquid, and place at once with one corner downwards in a plate rack and leave to dry hard.

The film side will be found to have a perfectly even and almost imperceptible coating of retouching varnish, quite sufficient to allow of retouching with pencil or paint.

Clean the back of the plate with spirit and cotton-wool, then, on a retouching desk, use for the lighter coloured defects an H or an HB pencil sharpened to a needle point, and for those light spots in a dark background a very fine paint-brush and lamblack with raw umber water-colour to match the colour of the slide. The brush must be charged with the correct depth of colour, and then almost dried on blotting-paper, and the point only, consisting practically of one hair, used with a stippling or cross-hatch effect.

Naturally, the retouching of the negative will require very great care so that there will be the minimum of the more difficult retouching on the lantern plate to be done.—Yours, etc.,

HAROLD F. BASSANO.

SIZE OF EXHIBITION PRINTS.

SIR,—May I suggest that the value of mere size is much less than generally supposed. What painters call "bigness" is a property entirely independent of size. Some of Turner's small drawings, not more than about one inch by two, were monumental in effect.

My experience in submitting prints for exhibitions for just over a year has been as follows: I have sent to fourteen exhibitions and only on one occasion have all the prints been rejected. I have had forty-eight prints shown. No print has been larger than half-plate.

Kindly allow me to sign myself—Yours, etc.,

"GUM-BICHROMATE."

HOW CAN WE ADVANCE?

SIR,—Little did I think that I should be letting my typewriter have the pleasure of writing a letter to you again so soon; but I do so in the hope that the way may be opened for further discussion upon the above vexed question.

Of course, when offering advice it is vitally necessary to know to whom one is speaking. So for the purpose of this letter I shall divide my remarks into three sections—for the "Beginner," the "Intermediate," and (heaven help me!) the "Advanced" worker. I commence without further preamble:

What is required of the beginner?

Now, how many beginners adequately realise the importance of *exposure* in their advancement? So in answer to the question "What is required of the beginner?" I would suggest that the first thing undoubtedly should be correct exposure; in fact, I consider the question of exposure to be so important that I should require only one other thing from a beginner—cleanliness in his work. For if a beginner can master that all-important lesson of correct exposure; and if he can then turn out well-graded black-and-white prints; and if he has learned tidily to mount his little prints—no matter what value pictorially—I am of the opinion that he can then (but not till then) call himself an intermediate worker.

But how many of us can do even that? For to do so not only calls for detail in the shadows and high-lights of the negative, but the detail repeated in the positive. It also means an unthumbed and perfect mount.

If everyone were to test himself in the above points—well, I think we should be very surprised to find how many beginners there are amongst the advanced workers!

Next comes the intermediate worker. What is required of him?

Now, when a worker has trained himself to turn out a nicely-graded and tidily-mounted print, and can repeatedly do so at will, he can next—without having to bother about the effect of solutions upon his sensitive material—think about the better arrangement of his pictures. In other words, he can give some thought to composition, the arrangement of lines, etc. But being able to *build* a picture is not sufficient to class him an advanced worker; more would be needed than that. He would also need to be able to spot-out pinholes; to use (say) megilp and oil colour to suppress unwanted high-lights, and—well, here's a list of what, in my opinion, is the least he should know. The first three items are, of course, carried over from the beginner's stage.

- (a) Correct exposure of negative.
- (b) Fully-graded black-and-white printing.
- (c) Perfectly clean mounting.
- (d) Good knowledge of composition.
- (e) Negative spotting.
- (f) Enlarging. (Including shading and over-printing.)
- (g) Print retouching.

In other words, a perfect groundwork of what usually goes under the name of technique.

And when the worker can do all the above things—when he can do *all* the above things—well, he may then forget the lot! But he will not be able to forget; and, remembering these things without effort, he will then be in that happy position (or is it?) of being able to call himself an advanced worker. He can start to create pictures with *aesthetic* value: romance, mystery, story—photographs plus imagination.

Call it sloppy sentimentality if you like; but in my opinion if an advanced worker does not try to weave some sort of mystery, romance or story into his pictures—or *something* that is not there for everyone to see—then he is not truly picture-making, but still recording facts. And a machine could do that.—Yours, etc.,

GEO. A. SLIGHT.

(Hon. Gen. Sec., the Photographic Miniature Postal Portfolio.)

DEVELOPING TANKS.

SIR,—A word of warning and appreciation of the Agfa developing tank. This is, I think, the perfect tank, but it needs great care in use, as after cleaning it may be put together in several wrong ways.

Also I find it dangerous to the film to try to wash it in the tank, but the real purpose of this letter is to point out that this make of tank will not serve for any film having paper attached to the loose end.

In an emergency I was obliged to use a film from a slot machine. On putting it into my tank and drawing out the backing paper, the film came out as well.

Moral: avoid using a make of film with which you are unfamiliar.—Yours, etc.,

E. KENNETH ROBINS.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Lighting for Beginners in Amateur Cinematography

By
R. H. ALDER.

F/_{3.5} is the largest aperture on nine-tenths of sub-standard ciné cameras in use. The owners regard artificial-light work as impossible—they have seen production stills of Elstree showing huge banks of lamps, auxiliary spots and floods, thick cables, and electricians in shirt sleeves on account of the heat.

All this light for superb taking objectives and the best negative stock that money can buy! The amateur, humbled, resigns himself to exteriors.

He need not. There is an antique principle, called the law of inverse squares, which comes to his rescue. Twenty thousand watts at twenty feet give no more light intensity than eight hundred watts at four feet. Eight hundred watts is not a lot of power—not even enough for a good electric fire.

What Power?

To the question, "How many watts?" the answer cannot be given in a simple formula. It depends on the results required. But we can say with confidence that work can be done with $60d^2$ watts in half-watt lamps and $25d^2$ watts with photo-floods, where d is the distance in feet between the lamps and the main point of interest.

This is not an extravagant allowance; it is the minimum, and it presumes the use of large reflectors that keep all the light in the set. Further, it does not allow for special effects; spots and strong top or back lights are regarded as extras. But it is enough to make a good impression on super-pan. film.

The disposition of lights, reflectors and camera is important. The set should be surrounded with reflectors—white or silvered screens—with little spaces through which the camera lens can peep. "Cheating" the reflectors is an art to be studied carefully.

Two lamps of different power must be regarded as the minimum. The direct light should fall from top side and top front. Too much front light

makes the shot flat and uninteresting; the side light must relatively be stronger so as to give good modelling. If it is too strong the shadows become harsh in spite of the reflectors.

Miniature Tests.

The embryo camera-man may make some amazingly useful experiments without exposing a single frame. Take a couple of electric torches and stick tissue-paper diffusers on their lenses. Borrow a small wax doll as a model and stand a couple of sheets of double foolscap on edge as reflectors.

In a dim light arrange these on the table top as a miniature set. Prop up the more powerful torch on a pile of books so that its light falls at an angle of 45 degrees on the model, and then try the effect of moving the reflectors and of placing the second torch.

It is no exaggeration to say that an hour so spent will give more real knowledge than a week's reading of textbooks on lighting!

Reflector Effects.

Remarkable effects can be obtained by using a large mirror as one of the reflectors. The result is not that of the recognised cross-lighting so often used in studio close shots, but comes very near to it. Care is exercised to see that the reflected beam covers the required depth—nothing is so disconcerting as to have an actor walk out of the light.

Another point for attention is the illumination of the background. It is fatally easy, when changing camera angle, to shift a reflector and halve the amount of light falling on the back of the set.

Two accessories are absolutely

Making light tests in miniature. With the aid of a small doll and a couple of electric torches many lessons in practical lighting for amateur ciné work can be learnt.

necessary: an exposure meter and a notebook. Records of the arrangement and meter reading for each shot are invaluable when planning future scenarios. Stability is the great virtue of artificial light; conditions can always be repeated.

For this reason the first reel may well be treated as experimental. By deliberately trying for certain effects and comparing the results with what was expected the camera-man can ensure that there will be no "re-takes" in the future.

It is Worth While.

The family man may perhaps wonder whether a few close and medium shots are worth so much trouble. After having everything under the sun as his field he feels cramped by the limitations of artificial light.

Those who have tried unhesitatingly answer "Yes!" Nothing depicts the family so faithfully as a series of close-ups of its members at their indoor occupations.

Further, the limitations are more

apparent than real. You cannot shoot a ballroom, but the essence of a home dance is shown by (a) father winding the gramophone and changing the record, (b) George asking Nina to dance, (c) twinkling toes as they pass the corner which holds the lamps, reflectors and tilted camera.

And, when Christmas is coming, there is the bringing in of the tree, its trimming, the nailing up of decorations, the making of the pudding and a thousand other things that are really "Home."

An Inexpensive Editing Bench—How to make and use it at home

By SIGURD MOIR.

EDITING benches vary very much in kind and in capability. The professional benches are most elaborate affairs, and in the present instance I have not overlooked one or two of their labour-saving features. Other benches—especially those of the rough-and-ready "home-made" type—are sometimes inefficient and disappointing; so perhaps the less we have to do with them the better.

Cost and Efficiency.

The editing bench described and illustrated upon this page is both inexpensive and highly efficient. It can be made at home and at a small cost. Naturally, the device must be adapted to the gauge of film usually employed by the constructor; and, although the instructions and measurements which follow are particularly applicable to 16-mm. practice, little trouble will be experienced in adapting the apparatus to deal with other sizes.

Construction.

Dimensions for the baseboard are somewhat arbitrary, but an over-all size of 30 x 6 (inches) will be found to facilitate an efficient lay-out of the complementary parts. One-inch material should be used, and the finished board should be well smoothed and

The complete Editing Bench.

polished. After this a pencilled line should be inscribed centrally down the full length on the underside of the board.

Two simple blocks, each 6 in. long, should next be cut from $1\frac{1}{2} \times 1$ in. material. After smoothing and polishing, these

should be affixed centrally and near the extreme ends of the board, retaining wood-screws being applied from the bottom at points previously determined along the pencilled line.

Upon these blocks must be mounted a couple of grindstone gearings (obtainable from Woolworth's multiple stores at a cost of sixpence each). To facilitate secure fitting, it will be found necessary to cut off the attachment arms so that only the angle spurs remain attached to the grinder gears; after this, a couple of supplementary holes may be drilled through these spurs in order to permit of a really stable attachment.

When fixing, both handles must face the front of the device, as shown in the accompanying illustration.

The Viewer.

The illuminated film-viewer must be arranged and fixed midway between the two geared rewinds already attached. This viewer consists simply of an inexpensive lamp centred within a plain shading device—made by taking a couple of pieces of thin batten (each $2\frac{1}{2}$ in. square) and connecting the two as shown with a piece of the same material 7 in. long and $1\frac{1}{4}$ in. wide.

The arrangement shown permits of viewing film frames over the top of the device whilst permitting sufficient light to escape from the lower slot during the operation of splicing. Before attaching the viewer, however, a batten-type lamp-holder should be centrally affixed to the inside of the right-hand support.

(Both this and the low-wattage (opal) economy lamp can be purchased from Woolworth's stores at a cost of sixpence each.)

Finally, the splicer itself should be screwed down at the front centre of the board as shown. In all cases, the constructor's existing splicer can be used; but where none is at present possessed it is advisable to purchase one of the Kodak new models. These are, in my opinion, the finest and speediest splicers now obtainable. But where it is impossible to afford more than a quarter of the price of this, I consider the latest model of the Agfa firm to be a good alternative.

(NOTE.—16-mm. spools cannot be immediately attached to the spindles of the geared rewinds as bought. The necessary squared attachment can be made and fitted by any amateur mechanically inclined; but an equally efficient and non-slipping friction grip can be obtained by covering the cylindrical spindles with short pieces of rubber (stout) tubing.—S. M.)

At the Exhibition of Cinematography at The Royal Photographic Society, 35, Russell Square, W.C.1, from Wednesday, November 7th to Friday, November 30th, the following programme of meetings will be held: Nov. 9th, 7 p.m., "Experiences as a Camera-man in Ceylon," by Basil Wright. Nov. 10th, 3 p.m., Films selected for projection from those submitted to the R.P.S. Competition. Nov. 16th, 7 p.m., Three Short Talks by Members of the Association of Ciné Technicians: (1) "Some Recent Developments in Sound," by S. S. A. Watkins, B.Sc., A.C.G.I., M.I.E.E.; (2) Demonstration of the British Schufftan Process of Trick Photography,

by W. D. Woolsey; (3) "Art Direction," by Edward Carrick. Nov. 17th, 3 p.m., Films by the G.P.O. Film Unit. Nov. 20th, 7 p.m., "The 'Interest' Film, its Preparation and Presentation," by F. Watts. Nov. 23rd, 7 p.m., "Films from the Projectionist's Point of View," by S. T. Perry. Nov. 24th, 3 p.m., Advertising and Commercial Films. Nov. 27th, 7 p.m. (1) A Talk and Demonstration of the Western Electric Race Timing Cinematograph Apparatus, by C. R. Keith; (2) Film showing Stroboscopic Light Motion Pictures, by Harold E. Edgerton; (3) Sound Film of the Badger, by Oliver G. Pike. Nov. 30th, 7 p.m., The Educational Film, by A. Mary Field.

THE BUYERS' GUIDE

At this season when so many amateur cinematographers are contemplating the purchase of projection apparatus, the following list of projectors, both for ciné films and lantern slides, will be found useful. It contains reference to all apparatus and accessories now available on the British market, and will enable comparisons of prices, etc., to be made according to the worker's requirements. Any apparatus illustrated is indicated by *. The list of all regular brands of sub-standard film will also be of use to those who are proposing to use their ciné cameras during the winter months. The addresses of the firms supplying the goods referred to are given in our advertisement pages, and readers should in every case write to the addresses given for all further particulars, which will be sent free on application.

SUB-STANDARD FILM FOR AMATEUR CINEMATOGRAPHY.

- Agfa.**
16-mm. Novopan Reversal: 40 ft. 15s. 8d., 50 ft. 17s. 6d., 100 ft. 32s. 6d.
16-mm. Pan. Negative: 33 ft. 7s. 3d., 50 ft. 10s., 100 ft. 19s.
- Culbin.**
Ortho. Negative: 9.5-mm. only, 30 ft. 2s. 7d., including development. Positive from Negative 2s. 5d.
- Gevaert.**
Ortho. Reversal: 9.5-mm., 30 ft. 2s. 7d., 50 ft. 4s. 6d., 100 ft. 9s.; 16-mm., 50 ft. 7s. 6d., 100 ft. 13s. 6d.

Positive: 16-mm., 50 ft. 4s. 8d., 100 ft. 8s. 10d.

SECTION I.—PROJECTORS.

(Motor-driven unless otherwise stated).

Aief.

Bilcin 171, 9.5-mm., 80-ft. capacity, hand drive, £4.

Bilcin 101, similar to 171, but with 300-ft. capacity, £9.

Motor for either model, £3 15s.

O. Schiff.

Ampro.

16-mm. latest bronze type, 500-watt, forward, reverse, rewind and stills mechanism, 4-claw action, in case, £45.

16-mm. Super type, 750-watt, all movements as above, aero-finned lamp-house, f/1.65 lens, finished in bronze and chromium, £60.

Edwin Gorse.

Bell & Howell Co., Ltd.

"Model J.S.,"* 16-mm., all-gear driven, f/1.65 Cooke lens, auto-

matic cooling, rewind, built-in disappearing pilot light, 750-watt illuminant, £84.

"Model R.T.,"* 16-mm., belt-driven, f/1.8 "Great Lite," lens, automatic cooling and rewind, £57.

Cinex, Ltd.

Paillard-Bolex P.A., 9.5-mm., adaptable for talking pictures, 250-watt light, automatic stoppage on notched titles, reverse mechanism, £24.

Paillard-Bolex G.916, 9.5-mm. and 16-mm., gear driven, 500-watt light,

f/1.6 1½-in. or f/1.8 2-in. anastigmat,

motor rewind, gate and pressure pads of stainless steel, £46.

Paillard Mono K.8, 8-mm., 250-watt light, reverse mechanism, automatic stopping on notched titles, £24.

Paillard "Publicity" Projector E. K., con-

tained in case to one end of which is fitted a translucent screen, £73 2s. 6d. Model E, necessitating removal of machine, £50.

Bolex-Paillard Home Talkie Projector, A.C. current only, 9.5-mm. and 16-mm., 250-watt air-cooled light, f/1.6 anastigmat, 24 or 16 pictures per sec., 78 or 33½ record revolutions, automatic adjustment of synchronisation, £90.

Cinepro, Ltd.

"Home" model, 16-mm., for 6-ft. pictures, £36.

"Standard" model, 16-mm., 250-watt, speed control, interchangeable, 2 or 3 blade shutter, £65.

"Superlux," 16-mm., for extra long throw, attachment for sound-on-film pictures, £96.

Celfix.

*9.5-mm. and 16-mm., change-over by lever movement. 2-in. Dallmeyer Superlite lens, forward, reverse and still mechanism, electrically regulated projection speed, condenser reflector unit, £27 10s. R. F. Hunter, Ltd.

Coronet Camera Co.

9.5-mm. Projector,* hand-drive, mains lighting, 100 to 150 volts or 200 to 250

volts A.C. or D.C. Also supplied for running on 6-volt accumulator, 45s.

Ensign, Ltd.

"300-B Silent Sixteen," 16-mm., f/1.8 Dallmeyer Superlite lens, automatic cooling, self-centring, 300-watt 100-volt illuminant for any current from 100 to 250 volts A.C. or D.C., 400-ft. capacity, £29 10s.

"100-B Silent Sixteen," 16-mm., f/1.8 Dallmeyer Superlite lens, automatic cooling, 100-watt 100-volt illuminant, for any current from 100 to 250 volts A.C. or D.C., 400-ft. capacity, £17 10s.

"Mickey Mouse," 16-mm., 100-ft. capacity, hand drive, £7 10s. Motor drive, £12 7s. 6d.

Kodak, Ltd.

Kodascope C,* 16-mm., 400-ft. capacity, 100 to 110 volts, or with resistance 200 to 250 volts, £18 18s.

Resistance £1 17s. 6d.

Kodascope D, 16-mm., 300-watt lamp, fan cooled, all voltages, £25

Kodascope K50,* 16-mm., 500-watt lamp, forward, reverse and still mechanism, central

lubrication, f/2 lens, rewind release and brake, £75. K75 similar, but with 750-watt lamp, £85.

Kodascope Eight-60, 8-mm., 100-watt, universal voltage, still mechanism, with automatic cooling, 200-ft. capacity, £25.

Kodascope Eight-30, 100-watt, built-in resistance, 200-ft. capacity, "stills" device with safety screen, £9 9s.

Midas.

Camera-Projector,* 9.5-mm., battery

drive, f/2.5 Taylor-Hobson anastigmat, black crystalline case, £7 7s.

Camera Projectors, Ltd.

Newton-Ensign.

16-mm., mirror arc lamp, cooling fan, £87 10s.

Newton & Co.

Pathéscope, Ltd.

"200-B," 9.5-mm.,* 200-watt illuminant, single-nut tilting device, automatic

cooling, mechanical rewind, interchangeable projection lenses, £15.

"Lux," 9.5-mm., 40-watt illuminant, for use with notched titles, 160-watt illuminant for titles with

out notches, ammeter and resistance incorporated, £30.

"Home-Movie" Projector, 9.5-mm., hand wind, £6 15s.

"Kid," 9.5-mm., hand wind, £2 15s.

Victor.

16-mm., 10FH,* Dallmeyer Super-Lite projection lens, 500-watt 100-volt self-centred filament lamp, will run on any

voltage from 100 to 250 volts A.C. or D.C., rack and pinion focussing, quick automatic rewind, operating during projection of second film, £60.

Model 12A Sound-on-Film Animatophone, projector features as for Model 10FH, motor governor, 5-valve 7½-watt amplifier, 30-in. dynamic speaker, £126.

J. H. Dallmeyer, Ltd.

Zeiss Ikon, Ltd.

Kinox,* 16-mm., all enclosed, right-angled mirror illuminant, f/1.4 anastigmat, stills mechanism, interchangeable 2 or 3 blade shutter, 250-watt model, £55. 375-watt model, £62 10s.

SECTION II.—PROJECTION LANTERNS.

Ensign, Ltd.

"Optiscope No. 6," double-lined metal body, all electric connections housed in base, 4½-in. condenser, leather bellows focussing, 100, 250 or 500 watt illuminant. Aldis Uno or Aldis-Butcher projection lens, in case, without lamp, £7 15s.

"Optiscope No. 9,"* Black ripple enamel and chromium plated, all-metal double-lined body, all electric connections housed in base, extra long throw,

4½-in. condenser, leather bellows focussing, 500-watt illuminant, Aldis Uno or Aldis-Butcher

projection lens, in case, without lamp, £11 10s.

"New Junior," enamelled metal body, draw-tube focussing, 60-watt illuminant, 4-in. condenser, 6-in. focus projection lens, in case, without lamp, £2 10s.

"Comet," crystalline enamelled metal body, draw-tube and rack and pinion focussing, 4-in. condenser, Aldis Uno projection lens in case, without lamp, £7 10s.

"Mickey Mouse," for use with ordinary house lighting, in case, £2 17s. 6d.

E. Leitz (London).

Attaché Case Projector, 2×2 in. slides, or 35-mm. film strips, 100-watt light, £10 13s.

VIII K Projector, for 35-mm. colour transparencies, 400-watt light, cooling cell, £16 15s.

Newton & Co.

Demonstrator's Lantern, "Wigmore" projection lens, mirrors for vertical and opaque projection, £38. "Popular" model, £20.

Type C, steel-bodied, 4-in. condensers, double achromatic lens, £14.

Type A2, metal-bodied, 4-in. condenser, double achromatic lens, £6 5s.

Type A3, with brass plate and larger body, £8 8s.

Zeiss Ikon, Ltd.

"Diabox" Portable. The carrying-case becomes the focussing extension of

the lantern, 250-watt, £15 7s. 6d., 500-watt, £16 12s. 6d.

SECTION III.—EPISCOPES AND EPIDIASCOPES.

E. Leitz (London).

Small Epidiascope VU,* 325-mm. episcopic and 225-mm. diascope lenses.

250-watt diascope projection light, quadruple mirror system for episcopic projection, £22 14s.

"Home" Episcopes, 200-mm. anastigmat, 100-watt light with quadruple mirror system, £12 14s.

Ross, Ltd.

Ross Epidiascope,* 10½-in. diascope anastigmat, 17-in. episcopic anastigmat, lever change from opaque to slide projection, £35. Extra for 500-watt lamp, £15s., 1,000 watt, £1 12s.

Zeiss Ikon, Ltd.

"Famulus" Epidiascope.* Single movement change from opaque to slide projection. 500-watt light. F/3.7

14½-in. epi-anastigmat, 10-in. diascope anastigmat, £44 15s.

"Magister" High Intensity Epidiascope, 24-in. epi-anastigmat, 13½-in. diascope anastigmat, open object table, £136.

"Adoro" Episcopes, f/4 12-in. anastigmat, 250-watt lamp, £16 10s.

SECTION IV.—ACCESSORIES.

Amateur Ciné Service.

Four-line Title Board, 180 letters and figures, 7s. 6d. Six-line Board, 360 large and small letters, 12s. 6d.

"Amacine" Transformers, alternating current only. For Pathéscope Home

Movie, 25s.; for Pathéscope 200-B and Paillard-Bolex C, D, DA or PA models,

35s.; for Paillard-Bolex G.916, 50s.; for Bell & Howell, 750-watt, 80s.

Camera Co.

"Dimmit" Home Ciné Dimmer, for fading out room lights, 25s.

De Luxe Carrying Case* for Pathéscope 200-B, holds 6 reels, projector and resistance, 17s. 6d.

Cinepro, Ltd.

"Cinea" 16-mm.* Film Splicing and Mending Outfit, £2 10s.

"Cinepro" 16-mm. Film Lubricator, £3 15s.

R. F. Hunter, Ltd.

"Celfix" Automatic Ciné Screen, 27×20, £3 10s.; 40×30, £4 12s. 6d. Sizes up to 80×60.

"Self-rector" Ciné Screen, 27×20, £2 5s.; 52×40, £4.

"Silhouette" Rigid Screen, 24×18, £1 5s.; 40×30, £2.

"Hunter" Ciné Film ×7 Magnifier, made for 9.5-mm. or 16-mm., 12s. 6d.

Coronet Camera Co.

Coronet Silver Screen, on enamelled wooden rollers, 30×20, 7s. 6d.

Coronet Titling Device, hardwood polished stand, collapsible grooved title holder, adjustable lighting slide, 21s.

Illustra Enterprises.

"Illustrachrome" Multi-colour Wheel, giving atmospheric effects and dissolving changes with contrasting colour blends without shadow. Home Movie model, 5s. Pathéscope 200-B model, 6s. For all other projectors, 7s. 6d.

"Illustrascreens," silver surface, with rollers, battens and framed sides. Rigid yet portable, 40×30, 20s.; 48×36, 25s.;

60×48, 40s.; "Big," for 200-B projectors, 96×72, 99s.

J. H. Dallmeyer, Ltd.

"Blendux" Photo-electric Ciné Exposure Meter, in ever-ready case, complete with tables showing f/ values for 8, 24, 32 and 64 speeds, in addition to normal reading of 16 frames, £4 4s.

Drem Products, Ltd.

Drem Extinction Ciné-meter,* with special Kodacolor scale, 30s.

Ensign, Ltd.

Ensign Rigid Silver Screen, 18×14, 12s. 6d.; 40×30, £1 17s. 6d.

"Britelite" Bead Screen, 40×30, £6 10s.; 48×36, £7 10s.

Ensign Portable Silver Screen, 32×24, £3 5s.; 50×40, £4 15s.

16-mm. "Humitin" Carrying-case, 5 reels, £2 2s.; 10 reels, £3 3s.

Ensign Universal Editor, for 8, 9.5 and 16 mm., £5 5s. each model.

Lantern Slide Carrying-box for 80 slides, 8s. 6d.; de luxe model, 13s. 6d.

Edwin Gorse.

Beaded Projection Screens, on rollers, 40×30, 45s.; Metal Automatic Cases, 65s.; "Lux" Leather-covered Auto-erect Cases from £4 17s. 6d.

Sands Hunter & Co., Ltd.

"Photoskop" Photo-electric Exposure Meter, showing ciné stop to be used, £5 5s.

"Correx" 16-mm. Ciné Film Developing Tank, 50 ft., £3 12s. 6d.

100 ft., £5 17s. 6d.

"Arri" Ciné Film Printing Machine, 9.5-mm. or 16-mm., £20.

Weston Electrical Instrument Co., Ltd.

Model 627* Photo-electric Ciné Exposure Meter, photonic cell, calibrated in

f/ Nos. from f/1.5 to f/32, £8 10s.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, October 31st.

Bethnal Green C.C. Practical Work.
Birkenhead P.A. "Portraiture by Artificial Light." H. Jones.
Birmingham P.S. (Ciné Section). Display of Films by J. C. Harris.
Camberwell C.C. Print and Slide Competition.
Coventry P.C. Criticism Evening.
Croydon C.C. "3 weeks, 2 eyes and 1 camera." J. G. St. Aubyn.
Dennistoun A.P.A. G.D.U. Lantern and S.P.F. Colour Slides.
G.E. Mechanics Inst. P.S. "Still Life."
Ilford P.S. "Cine-Kodak Eight and Kodascope Eight." Kodak, Ltd.
Northallerton and D.P.S. "Infra-red." E. T. Glaister.
South Suburban and C.P.S. "A Trip on the Footplate of the Flying Scotsman."
A. Barrett.
Worcestershire C.C. "The Amateur Photographer" Prize Slides.

Thursday, November 1st.

Ashton-under-Lyne P.S. "Exeter and South-East Devon." J. B. Statters.
Gateshead and D.C.C. Portraiture (Working Night).
Greenock C.C. Bromoil. Wm. Baxter.
Hammersmith H.H.P.S. "Malta." C. Cecil Davies.
Hull P.S. "Composition." R. C. Grimwood.
Keighley and D.P.A. "The Upper Reaches of the Yorkshire Derwent."
S. Greenwood.
Liverpool A.P.A. "The Upper Engadine." W. H. Collis.
Loughborough P.S. "Dorset, from Swanage to Lyme Regis." F. W. Ricks.
Newcastle and District A.C.A. Film by T. Temple.
N. Middlesex P.S. Competitions. Members' Queries.
Oldham P.S. L. and C.P.U. Prints.
Richmond C.C. "Forest Days and Forest Ways." F. Martin Duncan.
Singer C.C. "After-treatment of Negatives." J. Fearn.
Stourbridge Inst. P.S. "Methods of Reproduction." E. T. Whitfield.
Tadmorden P.S. "Plates, Papers and Films in Relation to Pictorial Photography."
S. Bridgen.
Tynemouth P.S. "Oil Reinforcement." W. F. T. Pinkney.
Watford C.C. "Truth, Art and Photography." H. Ransom.
Wimbledon C.C. "The Lights of London." G. A. Slight.
Woolwich P.S. Dark-room Methods. By Members.

Friday, November 2nd.

Bethnal Green C.C. Enlarging.
Hackney P.S. Outing: Chiswick to Hammersmith.
Harrogate P.S. Y.P.U. Portfolio and Slides.
Hinckley and D.P.S. Criticism Night.
John Ruskin C.C. Development Methods.
King's Heath P.S. Print Criticism.
Leigh Lit. Society P.S. "Yorkshire Gems." J. B. Statters.
Photomicrographic Society. "Even Illumination in Photomicrography." A. S. Newman.
St. Helens C.C. Slide-Making. G. A. Forman and A. B. Ginner.
Southend-on-Sea and D.P.S. "Finishing the Print." G. K. Rule.
Wimbledon Ciné Club. Demonstration by Sands Hunter & Co., Ltd.

Monday, November 5th.

Ashton and Hirst P.C. Infra-red. Ilford Ltd.
Bradford P.S. Print Night.
City of London and C.P.S. Combination Printing: Clouds. W. E. Ginger.
Dennistoun A.P.A. Preparing Bromide Prints.
Derby P.S. Development for Beginners. J. S. Fayers.
Dewsbury P.S. Y.P.U. Plaque Prints.
Erdington and D.P.S. "Photography and the Plain Man." H. J. Trueman.
Glasgow and W.S.P.A. "The Fascination of Sea and Shore Photography." G. S. Nicol.
Halifax P.S. Committee Meeting.
Ipswich and D.P.S. "Through Northern Italy." F. G. Brook.
Kingston-upon-Thames and D.P.S. Members' Lecture Evening.
Kidderminster and D.P.S. "A Holiday on the Waterways of Belgium and Holland."
Bernard Moore.
Leeds University P.S. "Amateur Cinematography." Dr. Lissimore.
London County Council Staff C.C. "Epping Forest." Harold Rose.

Monday, November 5th (contd.).

Luton and D.C.C. Criticism of Exhibition Prints and Slides.
Newcastle (Staffs) and D.C.C. "Elementary Photography of Animals and Birds."
J. Eymers.
Oxford P.S. "Sunny Italy." Murry Barford.
Plymouth Inst. P.S. General Discussion—Gadgets.
St. George Co-op. C.C. "Midas" Ciné Projector Demonstration.
St. Helens C.C. "Composition." M. O. Dell.
South London P.S. Criticism of Prints and Slides.
Southport P.S. "With Car and Camera in Scotland." G. Wheeldon.
Wallasey A.P.S. "Rathlin Island—a Bird Sanctuary." T. W. Eccles.
Walsall P.S. "The Abbey Church of St. Peter, Westminster." W. A. Clark.
Walthamstow and D.P.S. "A Ramble in Surrey." A. H. Redman.

Tuesday, November 6th.

Bedford C.C. "Wanderings in Little England beyond Wales." E. C. Harris.
Birmingham P.S. "Some Old Italian Gardens." W. Iveson Croom.
Cambridge P.C. "A Chat on Portrait and Figure Work." S. Bridgen.
Dunfermline P.A. Postal Club Slides.
Exeter C.C. "Exeter Cathedral." C. H. Stokes.
Guildford and D.C.C. Lectures by Members.
Hackney P.S. "Eva." S. C. Smith.
Halifax P.S. Members' Prints shown through Epidiascope.
Harrow C.C. "Light Filters and their Uses." J. Ainger Hall.
John Ruskin C.C. Practical Work.
Kilburn and Willesden P.S. "The Lights of London." Geo. A. Slight.
Leamington and D.P.S. "Skies and other Things." Frank Smyth.
Leeds P.S. "Experiences in Italy and Switzerland with a Camera." L. Williams.
Manchester A.P.S. "Spiders, their Life History and Habits." E. A. Robins.
Monklands P.S. G.D.U. Slides and S.P.F. Colour Slides.
Morecambe, Heysham and D.P.S. L. and C.P.U. Prints.
Newcastle and Tyneside P.S. Members' Print Competition Criticism.
Norwich and D.P.S. "Mount Everest" (Ciné Film) taken by Wyn Harris.
Norwood C.C. "Pictorial Composition." D. C. Rowlett.
Peterborough P.S. Negative Development.
Royal P.S. "The Dufaycolour Process." F. F. Renwick.
Rugby and D.P.S. "Photomicrography with a Brownie." C. F. Unwin.
St. Bride P.S. Exhibition Picture II. "Development." R. Harding.
Sheffield and H.P.S. "With a Camera and Ciné at the Zoo." F. A. Jordan.
Sheffield P.S. Joint Meeting with Sheffield and H.P.S.
Small Heath P.S. "Stray Thoughts on Composition." J. C. Chaplin.
South Glasgow C.C. S.P.F. Portfolio.
South Shields P.S. "Durham." Robert Chalmers.
Stafford P.S. Competition.
Swindon and N. Wilts C.C. "Victoria Road" (Photographic Records).
Warrington P.S. "The Finished Picture." R. E. Glover.

Wednesday, November 7th.

Bethnal Green C.C. Talk on "Still Life."
Birkenhead P.A. Studio Night.
Birmingham P.S. (Ciné Section). The New 16-mm. Sound Film Reproducing Apparatus, by N. Marshall.
Borough Poly. P.S. Print Competition.
Bradford P.S. Pictorial Group Evening. Y.P.U. Prints and Slides.
Brighton and Hove C.C. "Leica and Miniature Photography." J. Radford.
Coventry P.C. M.C.P.F. Portfolio and Slides.
Croydon C.C. "Filters and Safelights." Dr. S. O. Rawling.
Dennistoun A.P.A. Sashalite Demonstration.
Ealing P.S. "The Photographer and the Photograph." Bertram Cox.
Edinburgh P.S. "Pictures of Kashmir." G. W. Wight.
G.E. Mechanics Inst. P.S. Developers and Development. H. W. Bennett.
Ilford P.S. "A Chat on Pictorial Photography." S. Bridgen.
L.M.S. (London) P.S. "The Amateur Photographer" Prize Slides.
Northallerton and D.P.S. "Little Bits of Wensleydale." P. Utley.
Partick C.C. "The Photography of Moving Objects." John D. Robertson.
South London P.S. Ciné Group Meeting.
South Suburban and C.P.S. "Portraiture." H. Yolland Moyse.
Whitehall Ciné Society. Film—"Salzkammergut." Dr. Arcy Cartwright.
Worcestershire C.C. "Beauty-Spots of Cornwall." J. O. Wilkes.

Exhibitions and Competitions

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate, and Advanced Workers.—Entries, November 30. Rules in this issue.
Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.
Photographic Society of Ireland, Members' Annual Exhibition.—Entries, November 1; open, November 26–December 1. Secretary, A. V. Henry, 34, Lower Beechwood Avenue, Ranelagh, Dublin.
Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.
"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits,

November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.
Western International Salon.—Entries, November 19; open, December 10–15. Organising Secretary, W. H. Hill-Muchamore, 24, Church Road, Redhill, Bristol, 5.
8th International Christmas Salon of Photography, Antwerp, 1934–35.—Open, December 23, 1934–January 7, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.
Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotográfica de Madrid, Calle del Principe, 16, Madrid, Spain.
Preston Scientific Society Open Photographic Ex-

hibition.—Entries, January 11; open, January 28–February 16. Exhibition Secretary, F. Wells, 65, Powis Road, Ashton-on-Ribble, Preston, Lancs.
South London P.S. Annual Exhibition.—Entries, January 22; open, February 16–March 16. Details and entry forms from Hon. Exhibition Secretary, H. S. Adams, 40, Stockwell Park Road, S.W.9.
Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25–March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester.
City of London and Cripplegate P.S. Annual Exhibition.—Closing date, February 11; open, March 11–16. Exhibition Secretary, J. R. P. Hilliard, 86, Downton Avenue, Streatham Hill, S.W.2.

A Directory of British Amateur Cinematograph Societies

| Name of Society. | Address of Club Room or Headquarters. | Club Night. | Annual Subscription. | Name and Address of Secretary. |
|--|---|--------------------------------|-------------------------------------|--|
| Ace Movies (London) | 119, Mitcham Lane (opp. Thrale Road), Streatham, S.W.16 | Thursday, 8.30 p.m. | £2 | H. R. Hughes, Manager, Apsley Lodge, 13, Woodbourne Avenue, S.W.16. |
| Apex Motion Pictures | 50, Harrington Street, N.W.1 | Friday | £2/2/- | Miss Louise E. Johnston, 50, Harrington St., N.W.1. |
| Banbury Amateur Ciné Society .. | The Studio, South Bar, Banbury | Monday | 10/6 | H. Norman Blinkhorn, 5, South Bar, Banbury. |
| Brondesbury Ciné Society | 100, Chamberlayne Road, N.W.6 | Tuesday and Friday | 30/- | B. Ludin, 134, High St., Notting Hill Gate, W.11. |
| Civil Service Ciné Society | Treasury Chambers, Whitehall | 3rd Wednesday in Month | 10/6 | N. Reid, 21a, Elm Road, Sheen, S.W.14. |
| Crystal Pictures (Bournemouth) .. | 85, Wimborne Road, Bournemouth | Second Friday | — | R. G. Torrens, B.A., B.Sc., 85, Wimborne Road, Bournemouth. |
| Devon and Cornwall Film Society | "Vonda," Three Beeches, Paignton | 1st Monday in Month | 5/- per production | Tom H. Tattersall, "Seacroft," Steartfield Road, Paignton, Devon. |
| Dundee Ciné Society | Royal Hotel, Dundee | 13th of each month | 10/- | J. Clifford Todd, 5, Newington Terrace, Broughty Ferry, Angus. |
| Eastern Amateur Ciné Society .. | 209, Romford Road, Forest Gate, E.7 | Tuesday, 8 p.m. | 5/6 quarterly or £1/1/- yearly | C. Packman, 18, Margery Road, Forest Gate, E.7. |
| Felixstowe Amateur Productions | — | — | — | E. F. Pipe, "Kuling," Foxgrove Lane, Felixstowe. |
| Folkestone A.C.A. | 25, Guildhall Street, Folkestone | Thursday | £1/1/- | Jesse Boulton, 25, Guildhall Street, Folkestone. |
| Folkestone Movie Makers | — | — | — | B. R. Billings, Cupola House, Dover Rd., Folkestone. |
| Hull and District Amateur Cinematographers' Society .. | Hull Church Institute | Alternate Wednesdays, 8.0 p.m. | — | Miss V. C. Boards, South Street House, Cottingham. |
| Institute of Amateur Cinematographers | Burley House, 5/11, Theobalds Road, W.C. | — | Entrance fee 10/6 Subscription 10/6 | Wm. E. Chadwick, F.A.C.I., Burley House, 5/11, Theobalds Road, W.C. |
| Leeds Amateur Ciné Society | 216, Cardigan Road, Leeds | Thursday | £1/1/- | Secretary, "Wanstead," Ayresome Avenue, Roundhay, Leeds. |
| Leicester Amateur Ciné Club | Knighton Lodge, Elms Road | Alternate Fridays | 10/6 | R. T. Trasler, 85, Skipworth Street, Highfields, Leicester. |
| Leighton Linslade and District Amateur Ciné Society | 8, Chureh Square | 2nd and 4th Tuesdays | 2/6 | E. J. Cooke, "Virginia," Stanbridge Road, Leighton Buzzard, Beds. |
| Manchester Film Society | Thompson & Capper's Library, 51, Piccadilly | First and Third Wednesdays | £1/1/- | P. A. Le Neve Foster, 1, Raynham Avenue, Didsbury, Manchester. |
| Meteor Film Producing Society (Glasgow) | Studio at 234, Sauchiehall Street, Glasgow | — | — | Stanley L. Russell, 14, Kelvin Drive, Glasgow. |
| Neo-Film and Social Club | 38, Pembury Road, Clapton, E.5 | Wednesday, 8.30 p.m. | — | Miss R. Waxman, 94, Downs Park Road, Clapton, E.5. |
| Newcastle Amateur Cinematographers' Association .. | Bolbec Hall, Westgate Road | Thursday, 7.30 p.m. | £1/1/- | H. Wood, Bolbec Hall, Westgate Road, Newcastle-on-Tyne. |
| Royal Photographic Society (Ciné Group) | 35, Russell Square, W.C.1 | Friday | £2/2/- | H. H. Blacklock, 35, Russell Square, W.C.1. |
| Sheffield Film Productions (Private Group) .. | — | — | — | A. D. Hobson, 65, Pingle Road, Millhouses, Sheffield, 7. |
| Southampton Film Society | — | — | — | J. S. Fairfax Jones, 21, Ethelbert Avenue, Bassett Green, Southampton. |
| Southend-on-Sea Amateur Film Society | — | — | — | W. L. Gadsdon, 64, Genesta Road, Westcliff-on-Sea. |
| Stockport Film Society | 110, Mile End Lane, Stockport | Wednesday | £1/1/- | H. W. Greenwood, "Penrhos," Beaufort Road, Ashton-under-Lyne. |
| Tees-side Ciné Club | The Studio, Haymore Street, Middlesbrough | Thursday, 8.0 p.m. | £1/6/- | W. Shaw, 9, Caxton Street, Middlesbrough. |
| Tyneside Amateur Motion Picture Association | Guildford Place, Heaton, Newcastle-on-Tyne | Saturday and Wednesday | 18/- Learners, 24/- | W. O. Jackson, 10, Beaumont Terrace, Gosforth, nr. Newcastle. |
| West Middlesex Amateur Ciné Club | 105, Uxbridge Road, Ealing, W.5 | Tuesday | £1/1/- | The Secretary, 82, Coldershaw Road, W. Ealing. |
| Wimbledon Ciné Club | 79, Worple Road, Wimbledon, S.W.19 | Friday, 8.0 p.m. | 30/- | C. W. Watkins, 79, Mostyn Road, Merton Park, Surrey. |

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

The Fourth Annual Supper Dance, arranged by the Staff of Wallace Heaton Ltd., and associated companies, will be held at the Portman Rooms, Baker Street, W.1, on Saturday, 24th November, from 7.30 to 12. In conjunction with this there will be an exhibition of winning prints from the various staff photographic monthly competitions, which will be judged by the Editor of *The Amateur Photographer*. These supper dances are always very jolly affairs, and any readers who would care to attend may obtain tickets, price 5s., including refreshments, from Mr. H. S. Newcombe, at 119, New Bond Street, W.1.

The next Scottish National Salon, the twenty-seventh of the series, will be held in the Art Galleries, Ayr, from April 20th to May 4th, 1935. Receiving date for pictures from overseas is March 23rd.

Entry forms are now ready and are obtainable from the Hon. Salon Secretary, Mr. A. J. Nelson, 6, Hilary Crescent, Ayr, Scotland.

The award list in the Film Competition run in connection with the Exhibition of Cinematography at the Royal Photographic Society has just been issued. Plaques have been awarded to John Chear in Class I (9.5-mm.), and to G. H. F. Higginson in Class II (16-mm.).

The 1935 edition of the "Wellcome" Photographic Exposure Calculator, Handbook and Diary has just been published. The contents of the book have again been revised, the exposure and development factor tables having been brought up to date. These factors enable the amateur photographer to ascertain the exposure required for any one of the multitude of films and

plates now available, and about which the makers offer little or no data for use and to develop them correctly. A section is devoted to miniature camera technique, and the ciné worker, too, is not forgotten, nor the direct colour worker, for whom special articles and instructions are provided. There are, in addition, the usual diary features and exposure notebook pages. It is an invaluable little volume that every photographer should possess. It is obtainable from all dealers, price 1s. 6d.

A booklet that will appeal to every amateur photographer at the present time has just been issued by Kodak, Ltd. It is entitled "Picture-Making at Night," and shows by means of a series of well-chosen illustrations a variety of indoor subjects that can be taken easily at night by artificial illumination. Informative diagrams and other data are given to aid the beginner, and the entire booklet is admirably produced. It will be sent free to any reader of "The A.P." on application to Kodak, Ltd., Kingsway, London, W.C.2.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Cotton-wool for Colouring.

What is the method of tinting photographs with cotton-wool? Can it be used for photo-tints instead of brushes? E. J. M. (Portsmouth.)

Cotton-wool is often used for smoothing down oil-pigment colours or pastels on photographs, but you cannot use it for the dyes you have. These must be applied with a brush in the usual manner.

Masking Enlargement.

In controlling exposure when enlarging land and sky subjects what method do you suggest for avoiding the usual white margin between land and sky? F. L. G. (Barcelona.)

The only practical method of doing what you require is to cut a mask roughly to suit the skyline of the landscape, and to keep it moving during exposure. With some negatives this is easy; with others it is difficult or impossible to avoid showing what has been done. A good deal depends, too, on whether you wish to strengthen an existing sky, or to introduce one from another negative. This is the sort of thing that can only be satisfactorily learnt from practical demonstration by a skilled hand.

Postcards Curling.

I have been making some picture postcards, but they crinkle and curl when dry. How can I remedy this? R. T. McG. (Horsham.)

We do not understand what you mean by the postcards crinkling, but they naturally curl when dry. Professional firms prevent this by passing them through a drying machine, which is an expensive affair. All the amateur can do is to draw the cards under a ruler in the familiar way to take out the principal curl, and then put a pile of the cards under heavy pressure for some days.

Distorted Image.

In the enclosed print by a friend of mine you will see that the lines in the middle of the subject are upright, but there is pronounced leaning towards the edges. My friend says he always holds the camera level, and yet gets these curious results. Can you explain the mystery? R. D. (Cape Town.)

There is no mystery whatever about the print you send. The result is simply the familiar one due to tilting the camera upwards. If you had a row of vertical posts, those in the middle would be in the circumstances be more or less upright, and it would be the outer ones that would show increasing convergence. Your friend is mistaken in supposing that he held the camera level.

Value of Stops.

I have a Goerz lens on which the stops are marked 4.5, 6, 12, 24, 48, 96. Is this the U.S. method, or are they f/ numbers? J. G. C. (Lincoln.)

The stops on your lens are given according to the Stolze system, and the corresponding f/ numbers are 6.8, 7.7, 11, 16, 22 and 32 respectively.

Repairs.

Will you give me the name of a firm who will repair the shutter spring of a rather valuable camera? W. C. F. H. (Stalbridge.)

It is against our practice to recommend one firm in preference to others doing similar work. You will find repairers who advertise in our columns, and you will be quite safe in entrusting the work to any one of them you fancy.

Bright Lights in Print.

What is the reason for the black spots in the centres of the bright lights in the enclosed print? W. M. G. (Chester.)

The black spot in the middle of the light is quite a common phenomenon, and is due to reversal of the image in that part owing to the great power of the light and the long exposure. A touch of opaque pigment on the negative with a fine brush would put matters right.

Competition Prints.

Are $3\frac{1}{2} \times 2\frac{1}{2}$ Prints eligible for competition entries, including the daily Press? Has the surface of the print any bearing upon selection by the judges? S. F. Q. (London.)

There is no reason why you should not send $3\frac{1}{2} \times 2\frac{1}{2}$ prints in to competitions, unless a larger size is specified, but they are rather at a disadvantage where most of the entries are of much greater size. The best kind of surface for the print depends upon the character of the competition, and there is no general rule about it at all.

View of Bus.

In an illustration to one of the Beginners' articles is a bus which has driving seat and platform on the wrong sides. The view should be of the near side, and I cannot imagine how the hidden side could possibly be photographed. Would you enlighten me? D. H. G. (Lee.)

The view of the omnibus to which you refer is actually the near side, and you have evidently not thought of the very simple explanation that this happens to be a one-way street, and that is why the bus is on what would otherwise be its off side.

Reversal.

Can you suggest a method of remedying partial reversal in a negative? N. W. E. B. (Perranwell.)

There is no remedy for partial reversal in a negative.

Development Time.

What sort of subjects should have, respectively, longer, shorter, or normal development time? How can any such difference be made when developing roll film? J. C. C. (Kenya.)

You may decrease the development time when the subject is one with great contrasts of light and shade, but it is necessary that in this case the subject should have been exposed for the shadows and not for the high-lights. The development time may be increased when the subject itself is lacking in contrast, and you wish to get as bright a result as possible. In other cases normal development is correct. In the case of negatives on roll film the only method of differential developing is to cut the film up into sections after the images are visible, and then give each section whatever time you think appropriate.

Gum Bichromate.

Can you tell me of a good book on the gum-bichromate process? C. P. F. (Johannesburg.)

We have been looking into the matter, and cannot find any book now in print on the gum-bichromate process. In the "Dictionary of Photography," however, published by Messrs. Iliffe at 8s. post free, you will find the process dealt with in a complete manner, running to eight pages with several cross-references.

Reddish Tones.

I wish to tone some photographs a reddish brown, but am told uranium does not give permanent results. Is this so? H. R. (St. Helens.)

If uranium is properly used the results are reasonably permanent, but by no means so satisfactory as those obtained by sulphide toning. As a rule, reddish browns are considered objectionable for photographs, but if you wish to obtain them we think the best method would be to employ the Carbro process, although this is a somewhat roundabout method of producing what you want.

Let the speed
of the sun remind you of
**Criterion
MEZZOTONE**

RAPID CHLORO-BROMIDE PAPER
Such speed in a warm-tone-by-simple-development-
paper is unique, it is ample for enlarging as well as
for contact printing. Eight distinctive surfaces.

MEZZOTONE Lantern Plates have similar tone and
speed characteristics. Price 1/10 per dozen.

THIRTEENTH EDITION WALL'S DICTIONARY OF PHOTOGRAPHY

AND REFERENCE BOOK FOR THE AMATEUR
AND PROFESSIONAL PHOTOGRAPHER

Edited and largely re-written by
F. J. MORTIMER, Hon. F.R.P.S.

All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on such recent developments as infra-red, high-speed and colour photography. The volume provides practical information in dictionary form on every phase of the subject—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. Its contents are made readily accessible by the extensive use of cross references.

REVISED THROUGHOUT AND BROUGHT RIGHT UP TO DATE

PHOTOGRAPHY MADE EASY

By R. CHILD BAYLEY
Author of "The Complete Photographer,"
"Hand Cameras," "Photographic
Enlarging"

AS EASY AS A · B · C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography: it should form as much a part of the outfit as the camera itself: it is an ideal present to give an amateur photographer.

Crown 8vo, 250 pp. Stout paper covers

REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less 1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE—
 12 words or less 2/6
 2½d. for every additional word.

Each paragraph is charged separately.
SERIES DISCOUNTS. are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 260, Deansgate, Manchester, 3; 26a, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to ILIFFE AND SONS LTD., and crossed

Notes being untraceable if lost in transit should not be sent as remittances.

& Co.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'." Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1." and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

CAMERAS AND LENSES

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

CAMERAS AND LENSES

MARSHALL & CO., FORD ST., NOTTINGHAM.

EVERYTHING FOR MOVIES

PROJECTORS. SCREENS. FILMS.

Illustrachrome

The Illustrachrome Multi-Colour Wheel will enable you to give your movies in a fully professional manner by introducing delightful chromatic and atmospheric effects. You can present your feature opening with a blaze of glorious multi-tinting and then throughout the subject create a sense of reality that you have never before enjoyed. Then at the end pass from sunset to twilight in restful conclusion, you will be more than satisfied with the knowledge that you have given a perfectly artistic presentation by employing this aid to better movies. Universal model to fit all projectors, including the B-200, 6/-.

Illustrascreens

Highly Reflective Super Silver Projection Surfaces, mounted with rollers and battens, framed sides, with ingenious stretching device, assuring you a flawless picture area and maximum brilliance, rigid yet portable, easily rolled for transport after the show.

ORDER AN ILLUSTRASCREEN TO-DAY. Kindly observe the prices are modest in spite of the high-quality picture you will obtain.

30" x 40 in., 20/-; 36" x 48 in., 25/-; 48" x 60 in., 40/-; 52" x 72 in., 55/- . Any size made to order at the rate of 2/- per square ft.

Super Illustrascreens

(NEW NON-DIRECTIONAL SURFACE.)

In addition to our offerings described above, we now offer a special type of screen intended for the super projectors giving public displays. This new projection surface is non-directional, having a beaded effect and presenting a brilliant picture to the eye of every spectator, quite irrespective of the viewpoint. Made upon the Illustrascreen principle, with rollers and battens, in which the fabric is securely sandwiched, framed sides, ingenious stretching device, assuring an unsurpassable picture, both in brilliance and definition, rigid yet portable, easily dismantled after the show. These screens are ideal for B-200 users. 60" x 84 in., 70/-; 72" x 96 in., 120/-; 75" x 105 in., 140/- . Any size made to order.

For the benefit of owners of screens that may need renovating, we can supply special cut sheets of this super fabric, 72" x 105 in., 75/- . This would also enable any home constructor to make a super screen at a very low price.

PROJECTORS

We have the pleasure to advise that we have assembled a very large collection of Cine Projectors of an almost unlimited variety, including machines at prices to suit the most modest purse, some being as low as 25/- . Super Projectors, including talking, as low as £60 are also ready for inspection. From now until Xmas we intend to fit every projector sold, irrespective of price, with our

Illustrachrome Colour Device without any extra charge. Kindly Note.—YOUR INSPECTION IS INVITED. Our aim is to sell Cine Equipment of a high grade at reasonable cost direct to the public. Our terms are cash with order or C.O.D.

FILMS

9-mm., 16-mm., 35-mm.

Pathe 9-mm. Super Films in great variety are available for hire to callers. Pathe Super Films exchanged. 2/6 (plus 5d. postage) sent us with any Super Film you may desire to change will bring you a fresh subject from us. Send one or two and try this service, it will more clearly convince you that this is a worth-while service than writing to ask about it. Any film supplied by us in this service will be taken in exchange for a further 2/6 at any time when another film is required.

When sending film give a selection of numbers to indicate your preference. All the old favourites and new novelties available.

Always available.—Big Selection of Projection Bulbs, Motors, Lanterns, Resistances, Dimmers, Spotlights, Projection Tables, Rewinders. Not a shop, but a warehouse packed with Cine Equipment.

CINEMATOGRAPH APPARATUS

MILLER 9.5 Cine, f/3.5 Dallmeyer, variable speeds, etc.; as new, £6/10.—Verry 79, High St., Portsmouth. [4338]

'CINÉ' EQUIPMENT that ensures success

FILM PRINTER

9.5 and 16 mm.

Simply constructed, this is a low-priced but high-class machine. With "Arri" universal motor for all voltages, A.C. or D.C., simple adjusting of printing light; new device for printing from a single "frame" for titling. Complete with flex and plug. Price £20 : 0 : 0

"CORREX" CINÉ FILM DEVELOPING OUTFIT

The "Correx" Cine Film Developing Outfit consists of a winding frame, two metal reels, a "Correx" apron and circular enamelled developing dish. The "Correx" apron is made with corrugated edges, which prevent the surface of the film coming in contact with the apron, allowing the developer to circulate freely.

Outfit No. 109 for 50-ft. 16-mm. Film

£3 : 12 : 6

Outfit No. 209, for 100-ft. 16-mm. Film

£5 : 17 : 6

Collapsible Drying Frame, £12s. 6d. extra.

"PHOTOSKOP"

Electric Exposure Meter

Based on the properties of the photo-electric cell, therefore entirely automatic, the "Photoskop" is the ideal exposure meter for use with "cine" cameras. It indicates the "stop" to be used without reference to tables and without any calculations.

Price, with leather case £5 : 5 : 0

FOR AT-HOME PORTRAITS and HOME MOVIES

Indoor portraiture is well within the capabilities of every one who uses the Portable Floodlight Reflector, well-exposed negatives can be obtained with an exposure of 1/5th sec. at an aperture of f/4.5. With two Floodlight Reflectors, satisfactory indoor cine exposures can be made with any camera with f/3.5 lens. These Floodlights can be used off any ordinary electric light system. Price, 20/- including 9-ft. flex. Diffuser 2/6 extra.

Metals Telescopic Tripod extending 70 in. high. £12/6 500-watt Nitraphot Lamp, 20/- (Please state voltage.) Nitraphot Exposure Meter, 1/6

Optochrom Automat DAYLIGHT-LOADING ROLL-FILM DEVELOPING TANK

The Optochrom Automat Daylight-loading Developing Tank makes the user of roll film absolutely independent of a dark-room. No changing-bag is needed; nothing but the Optochrom Automat Tank itself, free from any "gadgets," glass parts, or anything that can go wrong.

Before developing, the paper backing to the film is drawn away, leaving all parts of the film surface equally free to take the developer—without spots, for or inequality. To take films $2\frac{1}{2} \times 2\frac{1}{2}$ in. or $2\frac{1}{2} \times 3\frac{1}{2}$ in.

Price **35/-**

Optochrom Thermometer (Fahr.).....2s. 6d.

THIRD
EDITION

MOTION PICTURES

with the Baby Ciné

A Handbook on 9.5-mm.
Cinematography

By

HAROLD B. ABBOTT

This handbook, specially written for amateur cinematographers, includes every aspect of the fascinating hobby of making motion pictures.

In the preparation of this third edition a thorough revision has been carried out. Much additional information has been included, and all important new apparatus has been brought under review.

The following Table of Contents indicates the wide range of the book and the completeness with which the subject is covered.

THE PRINCIPLES OF CINEMATOGRAPHY.

By Appointment

As advertisements on these covers go to press a fortnight in advance some of these second-hand items may be sold already, but similar outfits are usually available.

IF YOUR EYES WERE LIKE MICROSCOPES

and could see all the hidden detail in your negatives you would be amazed at the wealth of beauty which would be revealed. Only when your negatives are made into lantern slides and projected on to a screen can you see their loveliness and appreciate fully the wonders of photography. Ilford Lantern Plates are made in four grades and will make the best slides from your negatives.

The AMATEUR^{3^D} PHOTOGRAPHER & CINEMATOGRAPHER

~ The Journal for Everybody with a Camera ~

Vol. LXXVIII.

Wednesday, August 29th, 1934.

No. 2395.

For "Long" Shots use the
**ENSIGN TELEPHOTO
SPEED FILM REFLEX**

Fitted with Ensar f/4.5 anastigmat, and interchangeably with it a Dallmeyer f/6.5 telephoto lens capable of giving images of slightly more than double the size of those obtained with the standard lens. Shutter gives 1/25, 1/40, 1/50, 1/75, 1/125, 1/250, and 1/500 of a second, also Time.

Including complete set of colour filters, 2, 3, and 4 times, with spring mount, the whole outfit contained in handsome velvet-lined hand-sewn brown hide case.

£15 . 15 . 0

ENSIGN LIMITED, HIGH HOLBORN, LONDON, W.C.1

Mr. T. O. M. Sopwith's "Endeavour"—Challenger for The America Cup.

*Going into
detail*

"VERICHROME" is the film with an excellent memory for detail.

It is **Double-coated** to make doubly sure of getting fine detail in highlights and shadows, in poor or perfect light and **Anti-Halation Backed** to preserve crisp detail that would otherwise be killed by light reflected back from the film base.

Get all the detail—get

"VERICHROME"

SUPER IKONTA

The Camera that does the focussing

The Super Ikonta, while possessing the ever-ready features of the well-known Ikonta, has an extra device for correct focussing . . . THIS IS THE DISTANCE METER.

Whether the subject is 5 ft. or 50 ft. away from the camera it presents no difficulty to the user of the SUPER IKONTA, as the distance meter by the simple rotation of a knob gets the correct distance, and at the same time sets the lens to that distance.

This eliminates guessing the distance and ensures you beforehand that you will get good pictures, because they will be sharp.

Supplied in three sizes:—

No. 520, for 16 pictures $2\frac{1}{4} \times 1\frac{3}{8}$ in. on the usual $3\frac{1}{2} \times 2\frac{1}{4}$ in. film, Zeiss Tessar f/3.5, and Compur shutter. **£16:12:6**

No. 530/2, $3\frac{1}{4} \times 2\frac{1}{4}$ in. (or 16 pictures $2\frac{1}{4} \times 1\frac{3}{8}$ in.), f/4.5, in delayed-action Compur shutter. **£17:0:0**

No. 530/15, $4\frac{1}{4} \times 2\frac{1}{2}$ in. (or 16 pictures $2\frac{1}{2} \times 2\frac{1}{8}$ in.), f/4.5, in delayed-action Compur shutter. **£18:15:0**

All good dealers stock the Super Ikonta. Folder free on request.

VOL. LXXVIII. No. 2390.

THE amateur cinematographer should naturally take every opportunity of seeing the films of his fellow workers, but he should also study the films shown at cinemas. If he wears his considering cap he will see much that he might well emulate, and much also that he should carefully avoid. Two recent films come to our mind at the moment. "Man of Aran" is an example of what can be done without professional performers. No amateur can hope to approach such a record of an epic struggle of a brave and primitive community, or to secure such a sequence of stupendous sea pictures; but the film carries a valuable suggestion of humbler possibilities. The other film was an object-lesson in technique—in the use of panchromatic material and suitable filters. The rendering of incidents in a trip to the Mediterranean, Greece, Palestine and Egypt was so superb in tone values that one forgave the fact that the whole film was an advertisement of a well-known beverage.

The Stranger in our Midst.

A noteworthy feature of London this summer has been the number of foreign tourists carrying cameras. Every second person who has stepped out of the motor coaches carrying the conducted parties to the galleries and museums seems to have carried a camera, and to have proceeded forthwith to use it energetically. Is it a mere individual observation, or does it exemplify a national trait that Germans as a rule are more hasty with the camera than ourselves? Those we have seen appear to spend next to no time in composition. They never trouble to pose the little groups they like to take in the Corinthian porticos of

TOPICS of the Week

ROCKS AT TORQUAY.

*An article on Rocky Shore Photography
appears in this issue.*

our institutions, and the exposure has been made and the camera is back in its case before the ladies of the party have had time to straighten their skirts. Often the result must be the cruel bisecting of a figure or its elimination altogether. We know indeed of one German youth, staying for a time in an English household, and casting an affectionate eye upon the daughter, who has gravely imperilled his chances because, in taking a family group in the garden, the mother is represented only by one shoulder and a length of arm.

The Noise a Camera Makes.

Test match cricket, which is apt to be as dull as the proverbial alderman, was brightened up considerably at the Oval by the war of the cameramen, which was not only more bitter than the war between the test teams, but had a push and go about it from which the friends and critics of the M.C.C. might learn much. On the next occasion the photographic battle ought to occupy the centre of the field and draw the spectators, with a few interludes of cricket in the background. What rather amused us was the endeavour on the part of those who had the photographic rights to enlist the sporting public in a hunt for pirates, and the information that the noise of a hidden camera was like that of a sewing machine. Perhaps not all the men attending a cricket match are familiar with the purr of the Singer. But as concealment is often necessary, alike with the still and the movie camera, and the sound has to be concealed as well as the shape, we are surprised that no one so far has invented the entirely soundless instrument. If soundlessness is out of the question, surely in these

days of miracles in physics some device could be found for disguising the note of the camera, so that it resembled the twitter of a bird, or the distant lowing of cattle, or the sough of wind in the trees, or a motor horn, or a few bars by a crooner.

Whistler Again.

The Whistler centenary exhibition, which has been open during July and August at the Victoria and Albert Museum, has revived interest in one of the two great etchers of all time, the other being Rembrandt. In Whistler's copper plates there is an exquisite delicacy. This etcher and dry-pointer—for that is what he was even more than a worker in colour—has many useful lessons to teach photographers, especially in the simplicity of the materials which he used in order to get his effects. His doctrine that a good arrangement of simple masses provides the most important features

of a picture, and that attention to tone values ensures serenity, is one that photographers would do well to lay to heart. Perhaps they have more to learn from Whistler with his middle-key paintings and his prevailing greys than from any other modern painter. The lithographs in the exhibition were mostly produced after 1887, by which time lithographic transfer-paper had been much improved.

Mapping from Above.

We have been interested in studying the map of New York in the shape of an official photograph by the U.S. Army Air Corps made at an altitude of 26,300 ft., or only 3,000 ft. below the height of Everest, and more than twenty times the height of New York's tallest skyscraper. It is a single picture, and covers the country far beyond the confines of New York City, yet the remarkable thing is the detail which is discernible—Brooklyn

Bridge quite clearly, the lake in Central Park, the avenues of Manhattan, like tautly strung piano wires, all the bridges across the East River and the Hudson, the landing stages in New York Harbour, even the vessels out at sea. In time we shall no doubt see all maps made in this fashion, and the old type of map with its conventions for rivers and mountains will be a curiosity.

Death of G. E. Brown.

At the moment of going to press we have received the sad news of the death of George E. Brown, Editor of our contemporary, the "British Journal of Photography." This announcement will be read with the greatest regret by Mr. Brown's many friends in the photographic world. We will refer to our late colleague again next week.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with on this page week by week. Other replies appear as usual on the last page.

Casket Lenses.

I have acquired a case containing some separate lenses, with one iris mount into which they can be screwed. They seem to be of good quality and well mounted, but there are no directions how to use them. Moreover, the apertures are numbered only 1, 2, 3, etc. Can you give me a hint or two as to how to set to work, and particularly how to decide the f/ numbers?

E. L. (Beccles.)

Such casket sets of lenses were more in use in the days of the stand camera than they are to-day, but with a field camera having considerable variation in extension you will find your set serviceable. The particulars you give are too vague to enable us to do more than speak on general lines. As a rule the name of the makers appeared on the case or the mount, and each lens was given a distinguishing number, or marked with its focal length.

You must first find the focal length of each single lens. Screw the flange to the front of the camera. Take one of the lenses and screw it into the back of the mount, so that the diaphragm is in front of it. Focus a very distant object sharply, and measure the distance from the lens to the focussing screen at right angles to the screen. If there is no mark of any kind on the mount of the lens, make one yourself, and note down its focal length. Do the same with each lens.

It is likely that you have in the case an extension tube which screws into the mount; and if so this may have to be added to the mount for the longer focus single lenses, so as to bring the stop into a suitable position. Each of these single lenses can be used alone as a "landscape" lens, but you must find out by experiment what size of plate each one will cover.

The next step is to find out what lenses can be made by all possible combinations of the singles. These doublet lenses will be "rectilinears," and one of them may have a comparatively short focus for the plate it will cover, in which case it will be a "wide-angle" rectilinear.

A simple formula will help you to work out the focal length resulting from the combination of any two singles. If you call the focal length of one of the lenses A, and the focal length of the other B, and let S stand for their separation—i.e., the distance of one lens from the other in the mount—the formula is:

$$A \times B$$

$$A + B - S$$

Suppose you screw an 8-in. lens into one end of the mount, and a 6-in. lens into the other, and they are 2 in. apart, the focus of the combination will be:

$$\frac{8 \times 6}{8 + 6 - 2} = \frac{48}{12} = 4 \text{ in.}$$

In some cases you can increase the separation by means of the extension tube, and so slightly increase the focal length.

To find the f/ value of each stop for the different lenses the following will be sufficiently accurate. Rule on paper a line exactly equal to the focal length. Set the points of a pair of dividers to the diameter of the stop, and see how many times this distance is contained in the line drawn. This will give the f/ number.

We hope one day to give some information as to the use of such sets of lenses, with illustrations showing the result of using different focal lengths.

August 29th, 1934

DEVELOPING

Holiday Exposures

Holiday exposures differ from those made at home in quantity, and in the fact that the subjects cannot be repeated. In this note some hints are given as to the best way of dealing with a large number of exposed plates or films.

MOST photographers return from their annual holiday with a large number of exposed plates or films awaiting development. There is considerable pleasure to be had in finishing the exposures made upon holiday, from which it may be anticipated that a considerable proportion will materialise into negatives suited for enlargement, slide-making, or the production of exhibition prints during the autumn and winter months.

It is safe to say that many holiday exposures are spoiled, or result in negatives of indifferent quality through the photographer's natural desire to see the results quickly. It is the custom also to use small sizes, and to make a larger number of exposures. The smaller sizes need greater care in development, and the photographer who is dealing with larger numbers of negatives than he is familiar with should be on his guard against a possible cause of indifferent results, if not actually of failure.

Limit the Number.

The photographer who is used to handling half a dozen plates, the contents of a film pack, or one or two spools at the most at one time, should not exceed this number. It is easy to develop plate after plate, and film after film, but if the photographer has not the equipment to deal with large numbers, fixing and washing are not effectively done, with the result that the negatives will not be permanent.

The natural desire to see the results should be curbed, and a decision made to limit the number of exposures to be dealt with at any one time.

Solutions.

In order that exposures which cannot be replaced shall not be jeopardised the photographer should develop in the manner with which

he is familiar. In other words, no experiments should be contemplated, either with methods of development or developers.

A start should be made with freshly prepared solutions. A liberal

should not be used for more than one spool of film, or more than two plates. Any attempt at economy will be regretted if negatives of irreplaceable subjects are spoiled.

Proofing.

After all the negatives have been developed, it is a good plan to sort them into two or three groups, according to contrast, and to make a print from each. This idea of sorting the negatives in this way is that when printing upon gaslight or bromide paper one grade of paper can be employed for all the negatives in the group.

In the case of small negatives it is a good plan to make a set of enlargements of half-plate size, which may be used as "pilot" prints with a view to the photographer finding out the possibilities of each negative. Every negative should be printed in this way, and especially if the photographer is unfamiliar with the type of subject. It is very easy in such cases to be misled by mere inspection.

These preliminary prints will serve another useful purpose. They will indicate the presence of pinholes and other technical defects which require attention. Some results will also suggest the advisability of intensification, reduction, or other modification in some cases. All such work can be carried out so that the negatives are ready for future use.

Lastly, most photographers will have made promises of prints to those who may have helped to make the best of subjects by advice. Often the good intention to send the promised print is not carried out. If this is attended to early the photographer will not be in danger of forgetting to do so, while those who receive the prints will have them while the interest of the subject is still fresh in mind.

JOY OF LIFE.

A typical Holiday snapshot.

amount of fixing solution should be prepared so that overworking this bath, with the crop of evils which will inevitably follow, may be avoided. Freshly prepared developer is also indicated for the photographer who makes up his own, while if the developer is purchased in the prepared form, the same solution

"The A.P." Monthly Competitions PRIZES AND RULES.

To encourage pictorial outlook and good technique in the photographic work of our readers in all parts of the world.

(I) For Advanced Workers.

This class is open to all amateur photographers.
FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.
A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.
In addition to the general rules (see below), the following conditions apply:—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.
SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.
In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.
SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.
In addition to the general rules (see below), the following conditions apply:—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon

(see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the next competition is Friday, August 31st, and for the September competition, Saturday, September 29th.

"The A.P." Monthly Competitions AWARDS FOR JULY.

CURIOUSLY enough there was a slight falling off in the number of entries in the advanced workers' section for July. As a rule this is one of the months which brings the largest number of prints. The slight decrease in numbers was more than compensated by the high average excellence of the entries, and the allotting of the awards was even more difficult than usual. Both the intermediate and advanced sections were very heavily supported, although we regret to say that in the beginners' section there was again a considerable number of prints disqualified through not observing the regulation as to size limit. In fairness to other competitors these over-size prints are automatically rejected. The awards are as follows:

ADVANCED WORKERS' SECTION.

First Prize.—"Old Barges," by W. T. Dawson, 5, Eric Road, Wallasey.

Second Prize.—"Gossip," by J. H. Clark, 304, Camberwell New Road, London, S.E.5.

Third Prize.—"The Shore Watch," by John Muller, 53, E. 182nd Street, N.Y.C., N.Y.

Mounting Prize.—"By Quiet Waters," by E. Roper Yerbury, 48, Comiston Road, Edinburgh.

Certificates of Merit.—"Strayed," by J. H. Clark, 304, Camberwell New Road, London, S.E.; "Blings-gat," by G. Crosby, 30, St. Bernard's Road, London, E.6; "Sunshine and Shadows," by A. L. Syed, Palanpur (N.G.), India.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2, and Class 3, respectively.

Those awarded Honourable Mention are as follows: Edwin Broomer (Torquay); Norman Crawshaw (Bebington, Ches.); Martin Gibbs (Welwyn Garden City); (2) Hannah Hartley (Liverpool); H. How (Sheffield, 8); F. H. Hutton (Lincoln); C. Peters (Redruth); W. B. Pollard, Jun. (London, N.W.); George A. Slight (London, S.E.).

INTERMEDIATE SECTION.

First Prize.—"The Pier," by Octave Benselin, 24, Place du Sud, Charleroi, Belgium.

Second Prize.—"Kate," by Homi K. Dadyburjor, Panday House, Malabar Hill, Bombay.

Certificates of Merit.—"So that is Skye!" by Martin Gibbs, 2, The Orchard, Welwyn Garden City; "Toil," by Herbert A. Godfrey, 10, Redthorn Grove, Stechford, Birmingham, 9; "In a Cathedral," by Charles F. Lonsdale, 62, Percy Street, West Hartlepool; "Southsea," by Somsuke, 71, St. Ronan's Road, Southsea.

BEGINNERS' SECTION.

First Prize.—"Down the Steps," by C. Hynds, 25, The Green, Twickenham, Middlesex.

Second Prize.—"Waiting," by W. Scawn, 48, Monument Street, Devonport.

Certificates of Merit.—"Becalmed," by Captain A. M. Dore, I.A., Supply Depot, Kiamari, Karachi, India; "Summer Roses," by R. C. Jude, 2, King's Road, St. Ives, Hunts; "Idle Moments," by Norman S. Shaw, 33, Park Avenue, Golborne, Warrington; "On Guard," by W. R. Thorpe, 6, Sissinghurst Road, Addiscombe, Surrey.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, August 29th.

Camberwell C.C. Evening Ramble—Westminster.
Partick C.C. Print Criticism.
Rochdale P.S. Winter Syllabus.
Stockport P.S. Members' Questions and Answers.

Thursday, August 30th.

Hammersmith H.H.P.S. "Pictorial Composition." A. J. Milne.
Isle of Wight C.C. Portfolio by M. O. Dell.
N. Middlesex P.S. Lectures.

Friday, August 31st.

Wimbledon Ciné Club. Films by Hull Amateur Ciné Society.

Saturday, September 1st.

Bath P.S. Ford and Castle Combe.
Beckenham P.S. East End.
Bristol P.S. Failand.
Bromley C.C. City.
Hanley P.S. Trentham. Meet at Trentham Park Gates, 3 p.m.
Hucknall and D.P.S. Nottingham Subjects.
N. Middlesex P.S. Epping Forest.
Partick C.C. Cochno.
Rotherham P.S. Stainton.
Sheffield P.S. Ewden. Meet Bridge Street, 1.10 p.m.

Saturday, September 1st (contd.).

South Glasgow C.C. Gourock.
South London P.S. Hadley Woods.
Stockport P.S. Werneth Low.

Sunday, September 2nd.

Hammersmith H.H.P.S. Ide Hill.
Scarborough A.P.C. Joint Outing with York P.S.
Small Heath P.S. Coventry.
York P.S. Goathland—Joint Excursion with Scarborough A.P.C.

Monday, September 3rd.

Bournemouth C.C. Informal Evening.
Luton and D.C.C. Portfolio.
Southampton C.C. Lantern Slide Trial Evening.

Tuesday, September 4th.

Hackney P.S. Slide Competition.
Nelson C.C. "Why I like my Camera."
Rotherham P.S. "Fungi." A. S. Fountain.

Wednesday, September 5th.

Camberwell C.C. Practical Studio Evening.
Hucknall and D.C.C. Nottingham Subjects.
Plymouth I.P.S. Newnham Park.
Rochdale P.S. "Some Prints and How they were Made." G. W. G. Paylor.

IKON
SUPER
IKONTA**

*The camera
that does the
focussing.*

No. 530. Takes 16 pictures on standard $3\frac{1}{2} \times 2\frac{1}{2}$ Roll Films. Fitted f/3.5 Zeiss Tessar anastigmat, Compur shutter, speeds 1 to 1/3000 sec., T. and B., self-erecting front, built-in range-finder, ensuring critical focus for every picture. **£16:12:6**

Nine monthly payments of 38/10
No. 530/2. Takes 8 pictures $3\frac{1}{2} \times 2\frac{1}{2}$ or 16 pictures $2\frac{1}{2} \times 1\frac{1}{2}$ on standard $3\frac{1}{2} \times 2\frac{1}{2}$ Roll Films. Fitted f/4.5 Zeiss Tessar anastigmat, delayed-action Compur shutter, speeds 1 to 1/2500 sec., T. and B., self-erecting front. **£17:0:0**

**T.P. RUBY
HORIZONTAL
REFLEX**

A very compact reflex for plates $3\frac{1}{2} \times 2\frac{1}{2}$, or film packs $3\frac{1}{2} \times 2\frac{1}{2}$. F/4.5 Dallmeyer anastigmat, self-capping focal-plane shutter, speeds 1/10th to 1/1,000th sec. and time. Complete with 3 single dark slides.

Nine monthly payments of 20/5. **£8:15:0**

LEICA MODEL III
With F/2 Summar in Collapsible Mount.

Self-capping focal-plane shutter, speeds 1 to 1/5000th sec., T. and B., automatic focussing, interchangeable lens mount. Nine monthly payments of 78/6. **£33:13:0**
Fitted with f/3.5 Elmar anastigmat. **£25:0:0**

Nine monthly payments of 58/4.

**The DEKKO
CINÉ CAMERA**
for 9.5-mm. films.
British Made.

20-mm. f/3.5 Dallmeyer anastigmat (fixed focus), interchangeable screw-in lens mount. Variable speeds, half to normal and slow motion, 64 pictures per second, single-picture device, spring drive, taking through full 20 ft. of film at one winding, telescopic type finder. Body of special wear-resisting bakelite. All outside fittings and film gate chromium plated. **£6:6:0**

Nine monthly payments of 14/9. **£8:18:6**
Fitted 1-in. f/1.9 Dallmeyer anastigmat, micrometer focus. **£8:18:6**

Nine monthly payments of 20/10.

THE FOTH-DERBY Focal-plane

**AN
IDEAL
SPORTS
CAMERA**

Takes
16 pictures
on
V.P. Film.

F/3.5 Foth anastigmat, self-capping focal-plane shutter, with delayed-action device, speeds 1/25th to 1/5000th sec. and B. Very compact. **£4:12:6**

Nine monthly payments of 10/10.

Fig. 6.

Fig. 1.—Break the seal, and holding the spool between the thumb and second finger so that it will turn, draw out the black paper support, using the first finger to prevent the spool from turning too freely.

Fig. 2.—On reaching the film, detach the end.

Fig. 3.—Grip the end of the film in a metal paper clip.

Fig. 4.—Allow the paper clip to weigh down the film, which should hang free while the paper support is unrolled.

Fig. 5.—On reaching the second end of the film this is torn off, and

another paper clip can be fastened if required.

Fig. 6.—If the film is to be developed by the see-saw method the clips need not be removed, as they will form a useful means of holding the film. Trouble will ensue if the film is held in the hand.

A Camera

By W. L. F. WASTELL.

Perranporth.

I HAVE been pleasing myself lately—and incidentally others as well—by making selections of whole-plate enlargements from sets of holiday negatives, some of them taken several years ago. My latest effort has been with some negatives made in Devon and in Cornwall on successive holidays, and naturally I came across a number of records of the rocky coasts of these two lovely counties. Hence these notes.

It may seem strange to the up-to-date amateur that I used quarter-plates on both trips, and as the negatives are in the original boxes I am able to say that the Devonshire batch were on Wellington Anti-Screen, marked 300 H. and D., and the Cornwall lot on Barnet Super-speed Matt Ortho, with the then remarkable speed of 550 H. and D. The latter, I remember, were supplemented by $3\frac{1}{4} \times 2\frac{1}{4}$ roll films. These were used in a

of these subjects stormy skies and rough seas provide the best conditions.

folding camera, but the plates were all exposed in a quarter-plate Soho reflex, fitted with a 6-in. Homocentric and a 12-in. Telecentric.

Altogether I must have something like 350 negatives of these two holidays, and looking at them I doubt if I could improve on them to-day, except in some cases where panchromatic material would have been an advantage.

These bits of rocky coast scenery make, I think, very interesting and varied records. They are all-the-year-round subjects. Very often sunshine is an advantage, giving good modelling to the rocks, and effective contrasts of light and shade; but with many of the finest

Anstey's Cove.

At Land's End.

on *ROCKY SHORES*

West country coasts abound in dark rocks, mostly basaltic, and have a very different effect from the chalk cliffs found elsewhere. A strong treatment is generally required, but at the same time the modelling and structure of the rocks must be sufficiently well indicated.

Such a familiar subject as the rock arch at Perranporth is none too easy. Too often the dark rocks are rendered as a solid black silhouette, with halation blotting out the outlines of the opening and eliminating all tone in the bright peep beyond. As usual with such contrast subjects, the secret of success is sufficiently full exposure and curtailed development.

It is often an advantage to include figures to give an idea of scale, as in the cliff steps at Perranporth. It is unfortunate however, in the case of Anstey's Cove

A Natural Arch.

Torbay.

that some of the figures are perched on the foreground rocks, giving them unnatural points. Another misfortune is that in trimming the block of Torbay the sea-line has been canted; it is level enough in the negative.

There is a good deal of manœuvring with this class of work to find a viewpoint, for this varies considerably according to the subject and the particular effect required. The very nature of the coast generally makes it possible to work either

from sea-level, or from a greater or less elevation.

The climbing often required makes a heavy and bulky camera a bit of a handicap.

A Cornish Sphinx, Perranporth.

With the Beginners

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

NOTES & NOTIONS
for the
LESS ADVANCED
WORKER

WATCHING REFLECTIONS.

THERE are two important reasons why we should keep an eye on reflections when we are out with a camera. The first reason is that they may be the making of the picture; and the second is that they may spoil it.

When there is a heavy fall of rain in London—which there often is, in spite of the drought yarns—every Press photographer in Fleet Street rushes out and takes photographs of something or somebody reflected in the water. This is the regulation thing to do, and they do it; and very interesting some of the results are.

Perhaps you saw one the other day—a reflection of the top of the clock tower at Westminster. The art editors swallowed it at sight, although it contained a glaring blunder. To provide the “human interest” which art editors demand, the photographer had got a young lady to stand at the side of the puddle, and look straight down into it, as though enthralled by the perfection of the reflection of the clock. The point is that she could not possibly see anything of the sort from where she was standing; and the photographer and all his customers overlooked the most elementary and fundamental law of reflections, and made a ridiculous blunder.

Such reflections in water are the kind of thing that most concerns the photographer, and it is a glaringly obvious fact that a reflection depends on the relative positions of the observer, the object, and the reflecting surfaces. It follows that any change of viewpoint results in a change in the reflections, and this should be remembered when photographing a subject in which reflections play an important part.

If the camera is perfectly level any given point in a reflection will be vertically under the same point in the

Fig. 2.

actual object. This is clear, for example, in the chimney stack, and the point of the gable in Fig. 1. Further examination of less salient points will show that the law applies throughout. In Fig. 2 the camera was not level, and the “drawing” is consequently incorrect. With most landscape subjects it is not important that the camera shall be level, but when there are reflections of formal lines, such as those of a building, we must be cautious.

Fig. 1 shows the famous Flatford Bridge before restoration. There were holes in the footway through which a man could plop into the water below. I made several records of the bridge at different times, and this one is the worst. It is ruined by the reflections, and I am showing it as a warning. The fact is that reflections may make the subject too confused and complicated. This particular view would have been first-rate as a stereoscopic subject, and the realism would have been striking. On the flat, as it is, there is too much confusion, although a one-eyed view of the original print pulls it together considerably, as usual.

In Fig. 2 the reflection is not so troublesome. It is more subdued, and the surface of the water is broken by the weeds. It was too much broken, because there were detached fragments of weed everywhere. I have spotted these out in the right-hand half, where there were some 250 of them, but such work is not worth while unless the subject is a good one, and then it would require the making

Fig. 1.

of a new negative from the modified print. The point to note here, however, is that reflections, as a rule, should not be a mirror-like repetition of the objects. Repetition is often useful in pictures, but it must not be duplication. The reflection should be less assertive than the actual objects.

All the three subjects were within a few yards of each other, and the view of the mill as seen in Fig. 3 shows a pleasing form of reflection. The surface of the water is rippled, and the reflections are thereby so broken that they repeat only vaguely the objects that cause them. This is as it should be. Sometimes the water surface is so broken that reflections may disappear almost or quite completely.

Moving water never gives exact duplication, nor does water when its surface is ruffled by wind. The advice often given to break the surface of still water by throwing a stone or other heavy object into it is not always good. The ripples formed radiate from the spot where the object fell, and so betray their origin.

All these points, and several others, emphasise the necessity for watching reflections when photographing. Many effective pictures have resulted from

Fig. 3.

using reflections only, in which case additional care is needed. Other pictures have owed a good deal of their

charm to the reflections of clouds, often of clouds outside the actual picture space.
W. L. F. W.

AS OTHERS SEE US

THOSE with good memories may remember their surprise on seeing their photographs for the first time; their unreal appearance often leads them to

photograph should seem wrong; this is, that when we look at a photograph we are seeing ourselves as other people see us, and not as we see ourselves.

When looking into a mirror we see ourselves reversed from side to side, and the result is not our true selves. Our faces are not symmetrical; the left side is not like the right, the left eye is different from the right, and so on.

Obvious characteristics, such as a wart on one side of the nose, are easily noticed, but invariably the result of reversing the photograph is a new person which most people who know the subject would recognise as "different." This is due to the numerous small differences on each side of the face.

The second illustration is a reversed version of the first, and was made, of course, by reversing the negative when printing, so as to get the plain side in contact with the paper. A casual inspection will suggest two different photographs, but the details will be found to be identical. There are, of course, cases in which reversal is inadvisable.

By
J. JONES.

Photographers wishing to try this curious effect can easily do so as suggested, and can try the experiment with a person well known to their friends. In the present instance, all

Normal.

blame the photographer for a bad likeness. Now, although bad photography can result in a bad likeness, there is another reason why the

Reversed.

recognised the first as being more "lifelike," while the subject himself would approve of the second, as being what he is used to seeing in the mirror.

How I make my EXHIBITION PICTURES

No.
CCXLIV.

—
Mr.
L. VIZARD.

Methods and Ideals of well-known Pictorial Workers.

From information communicated to our Special Representative.

"I EXPERIENCE three emotions in photography: first pressing the button, secondly gazing at the developed plate, and lastly viewing the print from the depths of the waste-paper basket. The subjects I like are landscapes, bits and corners of old buildings and streets, and young children. The latter I think I have photographed most.

"I try to visualise how the finished picture will look in monochrome, and I find it a great help. I use only Ilford

S.G. pan. plates, backed, quarter-plate size. Development is carried out in total darkness by the time and temperature method, in conjunction with a table I have worked out to suit my own requirements.

"I work in bromide, chloro-bromide and bromoil—the last process I like most of all for the pleasure it gives in pigmenting, and as a means of expression. I do not usually go beyond the removing of blemishes and small portions of the picture, and darkening or other modifications where necessary.

"I use an Adams' quarter-plate reflex camera, to which I have fitted a lens-hood of my own make, which fits over the entire front of the camera and extends outwards for eight or nine inches. This is very necessary, as almost without exception I photograph into the sun, especially with children, and a deep hood enables me to point the camera almost into the direct path of the sun rays with impunity.

"For child studies I prefer to work indoors with the model between the window and the camera, but the latter pointing slightly to the right, in order to use a wall as a background. The lens used in these cases is a Dallmeyer 17-in. Telephoto f/5.6, and when used at full aperture causes the wall to be so out of focus that it makes an admirable background. The child usually sits on the bed, and the light reflected from the white bedclothes, bathed in morning sunshine, sufficiently lights up the shadow side. It only remains then to wait until the model is still and—then wait. The exposure must be adequate, 1/8th of a second at full aperture, without a filter, yielding a fine negative.

"I do not do much afterwork on the negative, although I have tried many methods. I find 'Frictol' very useful for rubbing down areas which have too much deposit, and comparatively easy to work if plenty of time is taken; and, in conjunction with bromoil, the amount of control possible by this method is more than necessary.

"I strive all the time to capture some mood of nature, and do not worry so much about the material or the composition, although, of course, I do not ignore the latter, but endeavour to make a picture; and gradually the art of seeing well is becoming no longer an effort. In conclusion, I would like to pay tribute to the invaluable aid given me by the Ilford Photographic Society, and my advice to those who wish to succeed in photography is, 'Join your local society'."

NOBODY TO PLAY WITH.

PICTURES of the WEEK

Some Critical Comments on the Beginners' prints reproduced on the opposite page.

DEPARTURES from the normal point of view usually provide an interest above the average, for, apart from anything else, the choice of such a viewpoint betrays an inquisitive turn of mind, which, if it does not always succeed, does, nevertheless, stand more chance of making a mark than a slavish adherence to the conventional.

Ancient and Modern.

It might be said, perhaps, that departures of this nature distinguish the modern way of looking at things from those of the past, and that Nos. 3 and 5 of the prints reproduced on the opposite page—"Chillon from Above," by P. T. Yonge, and "Roman Baths," by Mrs. D. Hall—disclose a tendency towards the former of the two classes.

They are, in any event, unconventional in that aspect of the subjects they represent, the first in according an emphasis to the roofs of the castle, and the second in its extreme length of foreground. Neither subject is shown as it is usually seen. Instead, the line of sight is directed downwards, and an uncommon impression of the scene is shown in each case. "Chillon," however, seems to suffer not a little from the scale in which the castle is shown. The viewpoint is rather too near; too little of the vertical walls are included; the subject appears to be rather cramped and lacking in stability in consequence, and the subject seems to have been taken the wrong way of the plate. It would make a better vertical than a horizontal picture, and, though it has a certain novelty, does not quite succeed in getting across.

With No. 5, the case is different. The long foreground is justified by the pleasing nature of the reflections, and by the fact that they are made to serve as an important adjunct to the pictorial motive.

Picture Proportions.

Actually, the centre of interest lies in the two broken columns in light towards the left-hand top, and the motive, for once in a way, is heightened in value by the duplication of the principal item.

In one sense, the columns and their

reflections might be regarded as a single element, for their relationship is obvious, and their connection well established.

The repetition of the other columns, while not competitive, lends a feeling of design to the arrangement, and, altogether, the work shows promise to a not inconsiderable degree.

At the same time, and though the choice of an abnormal viewpoint has achieved success in this particular instance, it would scarcely be wise to pursue the uncommon simply because it is not usually done. Such a course, besides having limitations, would tend towards eccentricity and, eventually, unintelligibility. The unusual is only justified if it provides a new aspect to beauty in some form or other, and it is better to seek to render beauty, whether, in so doing, the unusual is incorporated as well, than to search for novelty for the sake of novelty.

It may well be imagined that, when the subject of No. 5 was first seen, the sunlight on the pillars and their reflections inspired the exposure, and, to avoid the competition of the sky and to express the attraction of the sunshine and water to the utmost possible extent, the unusual proportion of foreground was decided upon.

A Question of Motive.

The line of sight would therefore be directed downwards, and, if it were chosen with such a motive, it is well justified and sound in its sincerity.

If, on the other hand, the downward viewpoint were adopted as an end in itself, and the inclusion of the effect were more or less accidental, the intention was insincere, although the end be the same.

That it is not necessary for any abnormal point of view to be sought in order to achieve a really pleasing picture is shown by No. 1, "Ex Cathedral," by L. P. Friendship, where the effect of the sunshine is delightfully rendered and the viewpoint is that which convention would dictate. The feeling of light, it is true, might be stressed by the introduction of an appropriate figure in the centre archway, but the choice of any but a level viewpoint could only have the result of impairing the appeal.

It is quite likely that the rising front was brought into action, but this scarcely amounts to altering the direction of view. Rather does it remain simply a matter of adjusting the portion of the subject required so that it fits the available picture space.

The Rising Front.

In this it is most useful, and, in all probability, No. 4, "Corner of Old Lynn," by R. Guest, provides another example of its employment.

The proportions of this picture are very well judged, but, had the lens been centrally placed, it is likely that there would have been an excess of foreground instead of just a sufficiency as at present. The effect of atmospheric sunshine, too, is very pleasingly rendered, and, in this instance, the fortunate presence of a figure stresses the feeling of light enormously.

Possibly the pose of that figure is not all that could be desired, but it does serve to give the picture point and emphasis, and, moreover, to provide an indication of what is needed in No. 1.

In comparison, and though it attains an equal technical level, No. 2, "After the Harvest," by David V. Sims, seems somewhat lacking in interest, for, while it would make an effective setting for a group, its innate appeal is slight. On the other hand, No. 6, "A Quiet Corner," by A. W. Kirkwood, has a considerably greater attraction as far as the setting is concerned, and it is graced with a figure as well.

Figures as Features.

The setting alone, with the sunlight on it, would have a certain appeal, but the effect is rather widespread and would lose in point on that account. The figure serves as a localising influence and concentrates the interest.

It makes the brightest note of any significance in the whole scheme, and, because of its brightness, the sunshine is endowed with value and vitality.

It tells with excellent effect, but, all the same, a little more shadow on both right- and left-hand margins would make it stronger, and, had it been found possible for the figure to have been caught looking towards the camera instead of away, the effect, as a whole, would have been finer still.

"MENTOR."

Pictorial Analysis

Every week one of the pictures reproduced on an art page will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"SMALLER CRAFT," by C. Peters.

THE effect of a culminating point of light as a factor in concentrating the interest, to which reference was made on the preceding page, is further demonstrated in this picture, for, although the arrangement of line and mass is satisfactory enough, there would be little to attract and hold the attention without the light which strikes the folded sail at (1).

The Dominating Light.

If the effect of the picture without that light can be visualised, it will readily be appreciated how slight its interest would be. The shapes of the boats would, perhaps, lend a suggestion of form and there might be some appeal arising from the light on the water, but it is questionable if it would be sufficient to lend any real pictorial attraction.

The interest, too, would be somewhat scattered, and scarcely more than topical in character; but, with the light on the sail, the case is altogether different. The sunlight is endowed with life and force; the point of light has the effect of pulling the whole composition together, and the work is endowed with an æsthetic appeal. It is all the greater on account of the sombreness of the setting, and the fact that the light is strongly placed is a further factor emphasising its dominance.

With the centre of interest in the upper portion of the picture, it might be considered that there is some justification for the length of the foreground, for a certain suggestion of novelty seems to arise from that placing, it being more usual for one of the lower four points formed by a division of thirds, vertically and horizontally, to be chosen in a subject of this class.

The presence of the overhanging stern of the vessel on the left does seem to afford a further reason, for, with so great a mass, a measure of space below appears advisable, or,

otherwise, its weight might be too great for the picture.

Mass and Stability.

Space is needful in order that there may be an adequate sense of stability, but, apart from this particular point, it is questionable if the degree of novelty is sufficient to warrant the departure from convention, for, although the water is diversified a

ground. Such a state of affairs might, however, involve a good deal of waiting, for it only seems to occur just about the turn of the tide, and only then when the amount of wind is negligible and insufficient to disturb the surface.

Nevertheless, did it happen and were it incorporated in the picture, the present proportions would be rendered perfectly acceptable; but, as the work stands, the conclusions are forced upon us that, in the first place, it would have been wiser for the mass of the vessel on the left to have been omitted, and, in the second, to have limited the amount included to that portion above the dotted line.

A Distinction and a Difference.

It further becomes evident, upon continued study of the print, that, despite the undoubted dominance of the point (1) as the centre of interest and its value in lending an artistic appeal, the attraction is inclined to the intellectual rather than the emotional. In other words, the subject has been treated in a way which is æsthetically sound, but which is not altogether convincing artistically, for it is one that, of its nature, seems to demand some sign of human activity to make it complete.

A distinction that would make a great deal of difference would be incorporated

by the inclusion of a figure in close proximity to the light in question. If it could be shown as the brightest light, so much the better, but, even if not, the touch of human interest, which the subject seems to need, would be provided, and the attraction enhanced accordingly.

However, the securing of a figure just where it is wanted is so much a matter of chance that it is scarcely fair to criticise the print on account of its absence. Nevertheless, it is mentioned as an ideal to be achieved, and possibly, on another occasion, fortune may be kinder. "MENTOR."

little, it is scarcely enough to justify its retention, nor would the appeal of the picture, as a whole, be impaired were the portion below the dotted line removed altogether.

If, on the other hand, the water had been caught in a more placid mood, and the reflections of the boats, their masts and rigging, and the irregularities of the setting, had provided a wavy replica of the upper portion of the subject—somewhat upon the lines of No. 5 of the prints reviewed on the preceding page—it is probable that the picture would be better able to carry the existing length of fore-

August 29th, 1934

EXHIBITIONS & COMPETITIONS

CURRENT AND FUTURE.

Notices of forthcoming exhibitions and competitions will be included here every week if particulars are sent by the responsible organisers.

The Amateur Photographer Monthly. Competitions for Beginners, Intermediate and Advanced Workers.—Entries, August 31. Rules in this issue.

Midland Salon (Castle Museum and Art Gallery, Nottingham).—Open, August 18–September 15.

"All Britain" Photographic Exhibition (organised by Scarborough Amateur Photographic Club).—Open, August 31–September 15. Exhibition Secretary, c/o 18, Ramhill Road, Scarborough, Yorks.

Seventh International Photographic Salon of Japan.—Open (Tokyo), October 1–10; (Osaka), October 20–26. Address all communications to The International Photographic Salon, Tokyo Asahi, Shimbun, Tokyo.

London Salon of Photography.—Open, September 8–October 6; sending-in day, August 29; entry forms from Hon. Secretary, 5a, Pall Mall East, London, S.W.1.

Royal Photographic Society.—Open, September 8–October 6. Secretary, 35, Russell Square, London, W.C.1.

Victorian International Salon (Melbourne Centenary, 1934).—Open, October 29–November 10. Secretary, C. Stuart Tompkins, Junction, Camberwell, E.6, Melbourne, Victoria, Australia.

Rotherham P.S. Annual Exhibition.—Entries, September 24; open, October 17–20. Secretary, E. George Alderman, Ruardene, Newton St., Rotherham.

Paris Salon.—Open, October 6–21. Secretary, M. E. Cousin, Société Française de Photographie, 51, Rue de Clichy, Paris (9E).

"Holiday Happiness" Competition.—Cash prizes. Particulars from Progress School of Photography, 10, Bolt Court, E.C.4. Closing date, October 31.

Johnson's Holiday Competition.—Cash prizes. Closing date, October 31. Full particulars from Johnson and Sons, Ltd., Hendon Way, N.W.4.

III International Photographic Salon of Poland at the Institute of Fine Arts, Krakow.—Open, August 26–September 30, 1934. Secretary, Fotoklub Polskiej, Y.M.C.A., Krakow, Krowoderska, 8, Poland.

Chicago International Salon.—Entries, November 1; open, December 13–January 20. Entry forms from Salon Committee, Chicago Camera Club, 137, N. Wabash Avenue, Chicago, Ill., U.S.A.

"Northern" Exhibition, City Art Gallery, Manchester.—Entry forms, November 7; exhibits, November 14; open, December 8–January 19. Secretary, J. Chapman, 25, Radstock Road, Stretford, Manchester.

8th International Christmas Salon of Photography, Antwerp 1934–35.—Open, December 23, 1934–January 6, 1935; entries, November 15. Particulars and entry forms from Mr. J. Van Dyck, Secretary of the Fotografische Kring "Iris," Ballaerstr., 69, Antwerp, Belgium.

Madrid International Salon.—Entries, December 10. Particulars from the Secretary, Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid, Spain.

Leicester and Leicestershire Photographic Society International Exhibition.—Open, February 25 to March 2, 1935, inclusive. Particulars and entry forms from the Hon. Organising Secretary, W. N. Plant, 30, Harrow Road, Leicester, England.

Isle of Man Publicity Board's Third Annual Photographic Snapshot Competition.—Entries, Saturday, October 6. Particulars may be obtained from the Secretary, Isle of Man Publicity Board, Bank Chambers, Douglas, I.O.M.

News & Reviews

Items of General Interest from all Quarters.

Red Book Day, the annual function in connection with the Red Book, the official publication of The Photographic Alliance, will be held on Saturday afternoon, the 15th September, at the Central Building, Y.W.C.A., Great Russell Street, W.C.1. There will be a reception at 4.30 p.m., followed by tea. The President of The Photographic Alliance, Mr. W. B. Shaw, will take the chair and will present the awards to the winners in the Print and Slide Competitions. The price of the tea ticket is 1s. 6d., and the room reserved for the occasion will accommodate 200. Application for tickets should be made to the Secretary of The Royal Photographic Society, 35, Russell Square, W.C.1, not later than September 8th.

The Autosiphon is an ingenious device, simple and effective, for facilitating the washing of negatives and prints in the lavatory basin at home or abroad. It is a bent vulcanite tube, one end of which is inserted in a rubber disc which replaces the ordinary plug in the

basin. These discs are available in all standard sizes. The inflow of water can be so regulated that the basin will alternately fill and empty, or that the level will remain constant. In any case, the hypo-contaminated water is drawn off from the bottom, as it should be. The accessory is made by Messrs. Photric Products, of 37, Albemarle Street, London, W.1, and can be obtained from photographic dealers at the reasonable price of 1s. 6d.

We offer to those interested a last-minute reminder that August 31st is the closing date for entries to the "Regent Exhibition of 1934."

Many readers will welcome the news that the Dufaycolor 16-mm. ciné film is now on sale at leading photographic dealers. This attractive colour process is the successful result of the continued efforts of Messrs. Spicer-Dufay (British), Ltd., who are to be congratulated on their achievement. We hope to make further reference to the film shortly.

In our issue of the 15th inst. we recorded the finding of a camera on the cliffs near Deal. It appears that it was not lost, but stolen from a motor yacht in Margate harbour, a sailing boat being stolen at the same time, and afterwards abandoned. The camera has been restored to its owner, to the gratification not only of himself but of the reader who was courteous enough to notify us of his find.

Lost.—A Ciné-Kodak Eight, No. 38912, with f/1.9 lens was lost in a tube train in London on August 13th. Information should be given to Messrs. Sashalite, Ltd., 28, Victoria Street, Westminster, S.W.1.

THE SUPER-SPORT CAMERA.

A CAMERA with a wide range in a small space has been sent us for review by Messrs. Actina, Ltd., 29, Red Lion Square, High Holborn, W.C.1. This is the "Certo" Super-Sport camera. It can be used as a spool camera for sixteen exposures, $2\frac{1}{2} \times 1\frac{1}{2}$ in., on the usual 6×9 cm. film, or for film packs and plate negatives $2\frac{1}{2} \times 2\frac{1}{2}$ in.

This camera, which is an extremely well-made instrument of metal, is of the automatic type when opening, the outstanding feature being the adjustable shutter for different sizes of pictures from the same film.

It is fitted with a variety of lenses ranging from the f/3.5 Trioplan anastigmat in Compur shutter at f/10, to the f/2.8 Zeiss Tessar in Compur shutter at f/15.65. The camera is small and compact, and has a metal body with leather covering.

The focussing adjustment is a simple attachment to the lens, and the release has been ingeniously duplicated for convenience when holding the camera vertically or horizontally.

An illustrated leaflet dealing with the Super-Sport is obtainable from the above address.

A NEW "JUSTOPHOT."

THE new pattern "Justophot" Exposure Meter (Drem Products, 37, Bedford Street, Strand, W.C.2) has an improved method for ascertaining the exposure required. First it contains an automatic adjustment for exposures with a filter—from two-times up to eight-times.

Then, even better still, it allows the instrument to be set for different speeds of plates or films *before the reading is taken*,

instead of after the reading has been taken. That is simpler and more convenient than the older method.

The directions issued with the new model are perhaps better than the old-style directions. Formerly photographers using the "Justophot" watched for the moment of the extinction of the test figure. Now they are told to start at zero and watch for the first trace of light that makes the figure just discernible.

With a chromium finish to the barrel and the figures on the rings clearer than ever on their white base, it looks the practical tool that it is. The price is 35s., with 3s. 6d. extra for a sturdy leather case.

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Editing Family Films

By
R. H. ALDER.

A PROFESSIONAL film editor, replying to an enquiry, said that his job was to "make the director's ideas at least intelligible, and—if possible—interesting." But he suffered from dyspepsia also.

Good editing is as necessary for a family film as for any other. Readers of these notes always, of course, start each film with a black leader followed by a title, and go through it cutting out defective frames and patching faulty sprocket holes. All splices are clean and neat—in short, there is not a single technical flaw.

Smooth Continuity.

Since a scenario was carefully written and faithfully followed, the stream of ideas has no sudden cascade of discontinuity which causes the audience to enquire what has happened now. There is no need of an extempore running commentary to make it clear that Elsie went from Gloucester to London by train and not by magic carpet or wishing-cloak.

In fact, the spool can be lent to an acquaintance to show to his family, knowing that they will find it interesting as well as intelligible. Yes?

That smooth intelligibility is what the editor ensures. In personal films it may be difficult to achieve, but there is the more joy in attainment. The difficulty lies in the fact that the amateur, especially the lone worker, cannot afford several takes of the same scene, consequently awkward transitions must be glossed over by afterwork.

Filling the Gap.

The first task is the mechanical one of assembling the scenes in their proper order. Then on projection it may be discovered that the flow of thought which appeared to be clear in the scenario is not so pellucid when translated into pictures. If so, the editor cuts in shots to preserve continuity. As a last resort he may insert another sub-title, but that would be a confession of weakness.

When these gaps are filled the editor decides the precise points of transition from one scene to the next.

Here again smoothness is his aim. If, for instance, there is a medium shot of George lifting a glass of shandy-gaff, followed by a close-up of him drinking, the position of the glass at the beginning of the later shot blends exactly with the position in the last frame of the earlier shot.

This is where the editor must be hard-hearted. There is a great temptation to overlap. Similarly, at the beginning and end of a sequence one is apt to keep in just one or two frames, regardless of the principle that the first frame must be just after action has begun, and not just before. The distinguishing mark of a work of art is "slickness"—all the essentials must be there but nothing more.

The Blue Pencil.

That "nothing more" is the summation of the first part of the editor's function. The scenarist plans to include all that makes a story, the director

translates into pictures, the editor blue-pencils out all that does not belong to the story.

The blue pencil, however, must be wielded carefully. It is better to pare off gradually as a joiner planes than to slice off lumps as a carpenter saws.

When at length the story is coherent yet succinct the editor is free to think of his finishing touches. Can he introduce into the presentation rhythms which will emphasise the moods of each chapter of the story?

For instance, while Elsie is playing with the dog, George is driving to meet her. The scenarist set this out as (1) a shot of Elsie and the dog, (2) close shot of George driving, (3) long shot of the car at speed, (4) another shot of Elsie. The editor decides that this wants speeding up. He promptly cuts shots (3) and (4) into two parts each and interleaves them, so to speak.

The seasons bring different subjects for the ciné camera. Above is a reminder that "cubbing" is now in full swing.

Willie, aged nine, in his Red Indian head-dress, is stalking his big brother George; unfortunately, the shots of Willie are too short and abrupt to suggest the idea of stealthy tracking. The editor cuts Willie in two and interposes a shot of the cat stalking a bird, using dissolves at the two joins to maintain smooth transition.

The dissolve, the wipe-dissolve, the simple cut, the slow and quick fade are tools which the editor shares with the scenarist. Some editors would like to establish a strict convention as to their use; employing, for example, the ordinary dissolve or mix to join

related ideas and the wipe-dissolve to join episodes related only in time.

Slaves of Convention ?

The amateur editor would do well to avoid slavish adoption of convention. He is the experimenter, and should lead rather than follow. But whatever he chooses to do must be done with one purpose—to emphasise the important details of the story, and not to show off his tricks. Good editing, like all good art, glorifies the subject and conceals itself.

When the editor has finished, there are two products—the film on the

spool and the film left in the bag. Don't throw away what is left over; ticket each length, index it, and put it away in numbered boxes. One of those bits may prove useful—perhaps as a flash-back in later years. At the worst it can be blacked with shoe-polish and used as a leader!

A Work of Art.

Editing grows on one. Intelligibility and interest are its ends, but those ends can be reached by many roads. The film editor enjoys the thrills of the explorer and the pride of the craftsman—in other words, he is an artist.

ACTION SUBJECTS

for the AMATEUR CINEMATOGRAPHER.

FORTHCOMING EVENTS DURING SEPTEMBER, 1934.

*The Amateur Photographer
and Cinematographer's Diary
of Forthcoming Events.*

| DATE. | EVENT. | PLACE. | DATE. | EVENT. | PLACE. |

| | | Pitlochry. | | | |

With the approach of autumn thoughts turn towards lantern lectures and ciné shows. Readers are reminded, therefore, that the Scottish Travel Association, of 2, North Charlotte Street, Edinburgh, 2, maintains a library of 16-mm. films of Scottish scenery and towns. These films are available on loan to film societies and others, only the postage being charged. A list may be had on application to the Association. The same

organisation is also prepared to lend sets of lantern slides, accompanied by notes which form the basis of lectures on Scotland or Scottish subjects. Both film library and slide collections have been revised and increased since last year, and, as the demand is likely to be heavy during the winter months, it is advisable to book dates well in advance.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Intensifying.

I wound a pool of film the wrong way round in the tank for developing, and the result is that there are clear strips of celluloid. I have used chromium intensifier without effect. How can I get any results from the film?

D. L. (Woking.)

If we are to understand from your letter that parts of your negatives are clear celluloid, there is nothing whatever you can do to remedy the trouble. An intensifier will strengthen an existing image, but it will not create one from nothing.

Press Agencies.

Could you give me the name of a Press agency which circulates free-lance news photographs?

F. J. W. W. (Bingley.)

We have frequently quoted the names of photographic Press agencies, but we repeat a few of them herewith: Photopress, Ltd., Johnson's Court, London, E.C.4; Central Press, Ltd., 119, Fleet Street, E.C.4; Photo Service Co., 124, Bermondsey Street, S.E.1; Associated Press (Great Britain), Ltd., 2 and 3, Hind Court, Fleet Street, E.C.4; Keystone View Co., 12, Wine Office Court, E.C.4; Planet News, 3, Johnson's Court, E.C.4; Sport and General Press Agency, 2 and 3, Gough Square, Fleet Street, E.C.4.

Infra-red Photography.

I have become interested in infra-red photography. Is it a process within the scope of an amateur? Is a book on the subject published?

D. W. (London.)

You do not explain what it is you wish to do with infra-red photography, as it is not adapted for ordinary work. You have to use the special plates and filter supplied by Messrs. Ilford, who also provide a good deal of information as to procedure. A book dealing with the subject is "Infra-Red Photography," by S. O. Rawling, published by Messrs. Blackie & Son, Ltd., at 3s. 6d. net.

Ciné Enlargements.

Can a good positive ciné frame be enlarged, say, up to postcard size? What plate is best? What outfit is necessary for the work? V. P. (London.)

The question of enlarging from positive ciné film is not one that can be dealt with in the form of a reply to a question. We should strongly advise you to get the book entitled "Motion Pictures with the Baby Ciné," by Harold B. Abbott, obtainable from our publishers, price 2s. 8d. post free. The subject is there dealt with quite fully enough to put you on the right road.

Postal Clubs.

Can you give me the address of the nearest photographic society? Will you also give particulars of a good class Postal Club?

J. W. S. (Manningtree.)

We do not know of any photographic society in your district. There are many good postal clubs, but in most of them we believe there is no room for further members at present, although vacancies occur from time to time. You will find a complete list of such clubs in "Photograms of the Year," and your best plan will be to get into communication with some of the secretaries.

Colour of Prints.

I am a great admirer of the tones obtained by photogravure, such as in the supplement to your Jubilee Number, but cannot obtain these tones myself. Can they be obtained by toning, and if so, how?

D. W. R. F. (London.)

You must remember that the reproductions to which you refer are printed in coloured ink, and it does not follow that the exact colour could be reproduced by photographic means. Similar tones can be obtained on both bromide and chloro-bromide papers, both by development and by toning, but it is naturally quite impossible for us to deal with this wide subject in the form of a reply to a question; it would require a small book to do the subject justice.

Borax Developer.

I think you once gave a pyro developer with borax as an ingredient. Could you repeat it?

W. A. B. (Droxford.)

We have no recollection of giving a pyro formulae with borax, as the latter ingredient is almost invariably used with M.Q. The following is a typical formula:

| | |
|----------------------------------|---------|
| Metol | 18 grs. |
| Sodium sulphite (anhydrous) .. . | 2 oz. |
| Hydroquinone | 45 grs. |
| Borax | 18 grs. |
| Water to | 20 oz. |

Paper Negatives.

Can you tell me of any method of treatment for paper negatives to minimise the grain?

W. R. (London.)

You are bound to get a certain amount of grain with paper negatives, and many workers use them in order to secure this. As long as you treat the paper negative by one of the methods for making it as translucent as possible there is nothing more that can be done.

Lines on Negative.

Can you tell me what has caused the multitude of fine lines on the film I send?

H. H. G. (St. Helens.)

What are often called telegraph wires on your negative are due to winding the film while the camera is closed, in which case the scratches are caused by the bellows. If this is not the reason it must be sought in the rollers, or some other surface over which the film is drawn.

Speed Numbers.

I have a Watkins meter, but the speed numbers on it are not H. & D. How can I work it?

J. T. B. (Glasgow.)

With the exposure meter you should have a speed card. This gives the Watkins speed numbers of all the well-known plates and films on the market, and these are what you should go by in using the meter.

Hypo Eliminator.

I find washing prints rather troublesome, and have bought a bottle of hypo killer. It works all right, but what is your opinion of hypo eliminators?

O. E. W. (Salford.)

We have over and over again dealt with the question of hypo eliminators in our columns, and have nothing to add to what we have already said. You say that the preparation you are using works all right, but you do not say on what grounds you have come to this conclusion. In our opinion, if prints are worth the trouble of making they are worth the little extra trouble of washing.

Stained Films.

I explain my method of developing. How can I avoid getting the stain as on the enclosed film?

R. H. G. (Brussels.)

The stains on the film you send have nothing whatever to do with the developer. Most of these dyes disappear when an acid-hypo bath is used for fixing, and any trace that may be left vanishes during the final washing. In some cases, however, it has been found advisable, if any stain is still visible, to put the films in water made just alkaline with a little ammonia.

The Roll-Film Mirror Reflex for Everybody

Rolleicord

FOR EXPERT RESULTS IN AMATEUR HANDS

See what you get—that is the great advantage of the Rolleicord—the reflex mirror shows you your picture actual size, right way up. It enables you to compose and take your picture in an instant without fear of heads or feet being chopped off, as with ordinary cameras.

The Rolleicord is unique in its ability to capture unusual and speed subjects. Cheap to run, takes 12 pictures on $3\frac{1}{2} \times 2\frac{1}{8}$ 8-exposure roll film for 1/-. With Zeiss Triotar f/4.5 lens **£10 : 10 : 0**

See that your Rolleicord is supplied in the patented solid leather case which hangs from the camera while in use by two leather straps. After exposure the camera slips back into the case easily and quickly. Price £1. See the name "Rolleicord" stamped on it.

FROM ALL GOOD PHOTOGRAPHIC DEALERS

Or write for Brochure giving full description, to the
SOLE IMPORTERS:

**R. F. HUNTER Ltd., 'Celfix House,' 51, Gray's Inn Rd.,
London, W.C.1**
Telephone: Holborn 7311/2.

THE MISSING LINK EXPOSURE ?

Every lens manufactured by a maker of repute is guaranteed to conform to the standards laid down by the Royal Photographic Society governing equivalent lens apertures. This definite factor is of little use unless we can measure with the same degree of accuracy, the actual value of the light at the time of exposure.

Both the Ombrox and Blendux Photo-electric Exposure Meters measure correctly, the light value under practically all conditions of lighting, and thereby supplying the MISSING LINK in successful photography and cinematography.

OMBRUX for Photography.

Suitable for all makes and types of plates and films, 3 to 30° Scheiner, 10 to 4,000 H. & D. Shutter speeds from 30 to 1/1,000th sec. All makes and sizes of cameras.

BLENDEX for Cinematography.

Suitable for all makes and types of film, orthochromatic, panchromatic, super-sensitive, normal speed 16 pictures, 8, 24, 32, 64, slow-motion. Lens apertures f/1.5 to f/32. All sizes of ciné film, 8-mm., 9½-mm., 16-mm. and 35-mm.

PRICE, either model, in Ever-Ready Case, **£4 : 4 : 0**

Ask your dealer to show you an instrument.

A demonstration will convince you.

THIRTEENTH EDITION WALL'S DICTIONARY OF PHOTOGRAPHY

AND REFERENCE BOOK FOR THE AMATEUR
AND PROFESSIONAL PHOTOGRAPHER

Edited and largely re-written by
F. J. MORTIMER, Hon. F.R.P.S.

All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on such recent developments as infra-red, high-speed and colour photography. The volume provides practical information in dictionary form on every phase of the subject—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. Its contents are made readily accessible by the extensive use of cross references.

Cloth Boards. Crown 8vo. 645 pages.
PRICE 7/6 NET By post 8/-

Publishing

OFFICES.—Dorset House, Stamford Street, London, S.E.1. Telegrams: "Amaphot. Watton, London." Telephone: Hop 3333 (50 lines).
PUBLISHING DATE.—"The Amateur Photographer and Cinematographer" is on sale throughout the United Kingdom every Wednesday morning.
SUBSCRIPTION RATES.—British Isles 17/4 per annum, Canada 17/4, other countries abroad 19/6 per annum, post free.
REMITTANCES.—Cheques, etc., should be crossed and made payable to Iliffe and Sons Ltd.

Displayed Advertisements

Communications on Advertisement matters should be addressed: The Advertisement Manager, "The Amateur Photographer and Cinematographer," Dorset House, Stamford Street, London, S.E.1. Copy for displayed advertisements for the issue of any particular week must reach Dorset House by the first post on Tuesday morning in the week previous. Rates and conditions will be sent upon application.

Prepaid Advertisements

SALE AND EXCHANGE: AMATEURS ONLY—
 12 words or less.....1/-
 1d. for every additional word.
PROFESSIONAL AND TRADE:—
 12 words or less.....2/6
 2d. for every additional word.

Each paragraph is charged separately.
SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue: 13 consecutive insertions, 5%; 26 consecutive, 10%; 52 consecutive, 15%.
 All advertisements inserted in these columns must be strictly prepaid and posted to arrive at the Head Office, Dorset House, Stamford Street, S.E.1, not later than first post FRIDAY for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry; Guildhall Buildings, Navigation Street, Birmingham, 2; 160, Deansgate, Manchester, 3; 26b, Renfield Street, Glasgow, C.2.
 Advertisements are inserted, as far as possible, in the order received, and those received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

Postal Orders sent in payment for Advertisements should be made payable to **ILIFFE AND SONS LTD.**, and crossed

Notes being untraceable if lost in transit should not be sent as remittances.

& Co.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

BOX NUMBERS.—For the convenience of advertisers, letters may be addressed to numbers at the office of this paper. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charges, which must include the words "Box 000, c/o 'The Amateur Photographer'". Replies should be addressed: "Box 000, c/o 'The Amateur Photographer,' Dorset House, Stamford Street, London, S.E.1," and these letters will be simply forwarded by us to the advertiser. It must be understood that we do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisement. Readers who reply to Box No. advertisements are warned against sending remittances through the post except in registered envelopes. In all such cases the use of the "Deposit System" is recommended.

Special Note

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post. When sending remittances direct to an advertiser, stamp for return should also be included for use in the event of the application proving unsuccessful.

Deposit System

Readers who hesitate to send money to advertisers in these columns may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Amateur Photographer and Cinematographer," both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods, they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in the event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For all transactions up to £10 a deposit fee of 1/- is charged; on transactions over £10 and under £50 the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, one-half per cent. All deposit matters are dealt with at Dorset House, Stamford Street, London, S.E.1, and cheques and money orders should be made payable to Iliffe and Sons Ltd.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

"PHOTOSKOP"

The New Electric Exposure Meter FOR "STILL" OR "CINE" CAMERAS

The ideal exposure meter. It is based on the properties of the photo-electric cell. It is, therefore, entirely automatic and in no way dependent on the human factor. Unlike other electric exposure meters, the Photoskop indicates the exposures directly without reference to tables and without any calculations.

MANCHESTER

HAND CAMERAS

Third
Edition

By R. Child Bayley

AN outstanding feature of this book, which makes a special appeal to all amateur photographers, is a number of separately printed plates, all from hand camera negatives by the author. These are selected to show the very wide range of subjects accessible to the snapshotter, from pure landscape to tele-photographic portraiture.

Though primarily written for the beginner, "Hand Cameras" contains much of interest to the advanced worker, and should be in the working library of all who would attain to the highest degree of artistic excellence in their work.

EASY PAYMENTS

Why not buy this easy way? We allow you to purchase any article on nine equal monthly instalments. First payment secures goods. Only 5 per cent added, or 5/- if under £5. No harsh formalities.

SPICER - DUFAY THE NEW 16-mm. DIRECT-COLOUR FILM

for all 16-mm. Cine Cameras and Projectors. 1.9 lenses no longer necessary. 21/- per 50 ft., including processing.

DON'T MISS THOSE LOVELY "AGAINST-THE-LIGHT" PICTURES

THE ZODEL COLLAPSIBLE LENS HOOD

(patent applied for) allows you to take pictures almost directly into the sun—combining portability with light weight and the greatest possible measure of protection. The Zodel hood has three sliding sections so designed that they cannot chafe and wear away the dead-black lining which ensures absence of reflection. An adjustable rectangular mask at the front ensures that the cone of light

entering the camera is of such shape that internal bellows reflections are almost non-existent, resulting in greatly increased brilliancy of negatives, while the adjustable sunshade-flap can be actually set to cast a shadow over the inside of the front for really exacting work.

Use a Zodel hood always. It measures less than an inch in thickness (closed) and will go easily into your camera case.

Push-in filter-holders to carry standard $\frac{1}{4}$ or $\frac{1}{2}$ in. circular glass filters are available.

Size A, to suit lenses $\frac{1}{4}$ to $\frac{1}{2}$ in. diameter.....7s. 6d.
Size B, to suit lenses $\frac{1}{2}$ to $\frac{3}{4}$ in. diameter.....7s. 6d.
Filter Ring, Size A, for $\frac{1}{4}$ -in. glass filter.....2s. 0d.
Filter Ring, Size B, for $\frac{1}{2}$ -in. glass filter.....2s. 0d.

The Automatic 'ROLLEIFLEX'

Here is the camera to get life into all your pictures. Has every gadget that goes for absolute perfection. Takes 12 exposures on standard 8-exposure $\frac{3}{4} \times \frac{2\frac{1}{2}}$ roll film. Zeiss Tessar f/4.5 lens. £20:0:0

F/3.8 Zeiss Tessar. £22:10:0

Nine monthly payments of 46/8 or 52/6.

LEICA MODEL III With F/2 Summar Lens

With automatic focussing, enabling lens focussing and distance measuring to be done in a single action. Greatly improved, with range of slow speeds. Get a Leica and get all the enjoyment that photography can give. It takes 36 exposures at a loading, and every negative makes a splendid enlargement. £33:13:0

Nine monthly payments of 78/6.

WE ARE THE LEICA SPECIALISTS.

USED BARGAINS

All in fully guaranteed good mechanical condition.

The AMATEUR^{3D} PHOTOGRAPHER & CINEMATOGRAPHER

~ The Journal for Everybody with a Camera ~

Vol. LXXVIII.

Wednesday, November 7th, 1934.

No. 2400.

TEN ZEISS LENSES

from extreme wide angle, $1\frac{1}{8}$ in., to Telephoto lens of $7\frac{1}{8}$ in. focal length, and apertures from $f/1.5$ to $f/8$, are available for interchangeable use with the Contax. All these Zeiss lenses are specially constructed Contax lenses, and possess the maximum defining powers, an indispensable quality with lenses fitted to miniature cameras. The Contax here illustrated is fitted with Zeiss Sonnar $f/2$,

CONTAX

MINIATURE CAMERA PERFECTION

the finest universal optical instrument known in miniature photography. The definition is perfect, the rapidity ample even for night photography, and the compact mounting of the lens does not necessitate a collapsible mount, so it is possible to claim for this combination an "ever-readiness" which cannot be present when lenses in so-called collapsible mounts are used.

The above picture is an enlargement from a Contax negative taken by Mr. H. B. Burdekin, A.R.P.S.

Full particulars with our books, "The Connoisseur and the Contax," "The Ten Contax Lenses," and "Accessories for Contax Photography," will be sent free on request.

ZEISS IKON LTD., 11, Mortimer House, Mortimer St., London, W.1

Get your camera out to-night!

★ Inexpensive New Kodak Equipment makes

indoor picture-making at night easy.

Fast Kodak panchromatic films, extremely sensitive to artificial light, allow big reductions in exposure times. Handy, low-priced lighting aids provide brilliant, easily-controlled illumination in any room.

Fireside portraits, a bridge party, the kiddies at bath-time—new pictures in plenty—start making them to-night!

KODAK SUPER SENSITIVE PANCHROMATIC FILM.

Three times as fast as regular Kodak Film to artificial light.

"PANATOMIC" FILM.

Not quite so fast as "S.S. Pan," but still very much faster to artificial light than regular Kodak Film. Superfine grain.

THE NEW "PHOTOFLOOD" LAMP.

THE "KODAFLECTOR" JUNIOR.

THE "SASHALITE" OUTFIT.

NEW "PHOTOFLOOD" LAMP.

Plugs into ordinary electric light socket; gives intense, continuous light; one and half times as powerful as earlier type, yet reduced to nearly half the price. Lasts for approximately two hours continuous burning time, sufficient for an immense number of exposures. Safety fuse incorporated 4/-

"KODAFLECTOR" JUNIOR.

Reflector for "Photoflood"; increases effectiveness of illumination two and half times. Supplied with handy wire stand that can be stood on table, hung from wall, over chair, etc., in a dozen useful positions. Complete with 9 feet of flex, but without lamp 6/-

"SASHALITE" BULB.

The powderless successor to flashlight. Flash takes place in sealed glass bulb, fired by ordinary torch battery. No smoke, no smell, no danger. Each bulb gives one brilliant flash. Allows night-time indoor snapshots to be taken with *any* camera.

Per bulb, 10½d.

Complete Sashalite Outfit containing 2 Bulbs, Battery in Holder, and Metal-surfaced Collapsible Reflector 7/6

Speaks for itself !!!

BRITISH
MADE

There is no need to speak at length of the exceptional qualities of the SOHO PRECISION Camera. Read this extract from a letter recently addressed to the London Camera Exchange Co., Ltd., by an advanced amateur photographer:

"You may remember you recently supplied a Soho 'Precision' Camera to me, this is worth its weight in platinum, and is producing as good results as I formerly obtained with a half-plate triple extension camera."

We could ask for no better confirmation of our claim that the SOHO PRECISION possesses all the advantages of a FIELD CAMERA and is in addition as MOBILE AS A POCKET CAMERA.

full details from **SOHO LTD., 3, Soho Square, LONDON, W.1**

THE SOHO
PRECISION

PRICE: The price of the Camera for $3\frac{1}{2} \times 2\frac{1}{2}$ size picture, including 3 first-quality double plate-holders, but without lens, is £13:10:0. Leaflet with full specification and particulars of a wide range of lenses free on request.

SIEMENS HOME PROJECTOR

Has a light value of 60 lumens giving a brilliant picture up to 6 ft. wide. Similar in specification to the standard model. £36

Nine monthly payments of £4 4 0.

Selochrome scores again!

Three journeys through the
tropics in two years and
"EVERY NEGATIVE PERFECT."

READ THIS LETTER

BENGAL NAGPUR RAILWAY HOUSE,
KIDDERPORE,
CALCUTTA,

8.8.34.

Dear Sirs,

Some two years ago you sent me two rolls of Selochrome film. Shortly afterwards I proceeded on leave, taking the films with me, and they lay in my luggage until I unearthed them on my return 10 months ago.

While passing through the Red Sea I put a roll in the camera and made some exposures. It remained in the camera from the middle of February until late in May, the weather having been exceptionally hot in Bengal.

It is usually presumed here that 10 days is about the safe limit in the hot weather. I therefore had little hopes of recognisable results, but had the film developed. Every negative was perfect.

I consider this an exceptionally creditable result, and have been happy to bring it to the notice of my friends who have suffered, as I did previously, from mottled negatives. Please make any use you like of this letter.

Yours truly,

(Signed) W. W. CREALOCK.

Vol. LXXVIII. No. 2400.

THERE is little need nowadays to emphasize the fact that amateur photography is no longer a seasonal hobby. Modern films, plates, lenses and cameras have rendered the keen worker independent of sunny days for snapshots. An increasing inclination for greater knowledge of the subject, coupled with the desire to make his own prints, are factors that have further encouraged every owner of a camera to continue to use it all the year round. The late autumn, in particular, is an ideal period for the purpose. Out of doors the light is still strong, and with a quality of its own that beautifies the landscape, which, in turn, is now more attractive in colouring and atmosphere than at any other season of the year. Indoors, the urge to deal with exposures made during summer holiday time is strong with every amateur, and those who have dark-rooms, or similar convenience for developing, printing and enlarging, are finding much to occupy their attention.

Where the Societies Help.

A glance at the page devoted to "The Week's Meetings" in this and every issue of "The A.P." will give an indication of the current activities of the British Photographic Societies. The winter season is only just starting, and it is a healthy sign that so much interest in photographic matters is kept going during the dull months of the year. This is due largely to the amateurs who evince a continued desire for knowledge of photographic practice. These have increased enormously in numbers during the past year, and we welcome them to the ranks of serious photographers who no longer depend on the "D. and P." firms for their

TOPICS of the Week

negatives and prints. The societies and clubs are doing good work in encouraging new members who are novices, and helping them with practical demonstrations and other attentions. We, on our part, will do all we can to help the societies in this direction, and publish a reminder of all fixtures if the details are sent to us in good time. In the meantime, any reader of "The A.P." who is not already a member of a photographic society should hasten to join one; he will not regret it. We will send the address of the nearest in his neighbourhood if he will write us.

The Dark-room and Eyesight.

When working in a dim ruby light which is relied upon to any great extent, there is a considerable strain on the eyes. If touch is instead made the guide, this will be prevented. Working in complete darkness is excellent practice for this. Some have been afraid to adopt it until panchromatic materials have compelled them to do so, with the result that they have found it easier than depending on a dim light of any kind. A dark green light is claimed by some to be kinder to the eyes than ruby. Those who are wedded to dish development, especially by the factorial method, will find desensitising has much to offer. In a dim light it is sometimes very difficult to see the first appearance of the image, which is the essential calculation by this method. Another way in which dark-room work may injure the eyesight is by too quick a change from the dim light or complete darkness to daylight or even ordinary artificial light. Some large firms now have their dark-rooms with the entrance at the end of a long passage, so that on

A LONDON SNAPSHOT AT NIGHT.

This unusual viewpoint for the Thames Embankment produces a most effective result, and was obtained with a very brief exposure on S.S. panchromatic film.

coming out the change to daylight is a gradual one. At home this may well be imitated by drawing the curtain across the window nearest the dark-room, especially if there is strong sunlight. Within the dark-room, also, this precaution should be carried out. An immediate change from ruby to ordinary artificial light should be avoided. A reader of "The A.P." who has considered the matter has permanently fitted up orange and yellow lights for bromide and gaslight printing respectively, and by switching on the orange after the ruby, and then the yellow, he finds the strain on the eyes is minimised.

"Next Slide, Please."

The other evening we attended a lantern lecture given to a large

audience in the West End of London, when some quite excellent slides were projected, but the mistake was made throughout of keeping them in the lantern far too long. The lanternist, perched in a distant gallery, never heard the lecturer's suggestion that some of the slides might be passed through quickly, and he rigidly adhered to the pre-arranged plan of giving every slide exactly sixty seconds on the screen. Sixty seconds can be an appalling time in such circumstances. Nobody knows who has not seen a succession of slides changed at one-minute intervals, what a boring process it was. To alleviate the general tedium, however, the lanternist kindly placed in front of his lantern certain coloured glass which made the slides go red and, like the

audience, blue. The time to keep a slide on the screen must vary, of course, with the interest of the subject, but usually fifteen or twenty seconds is quite long enough. It must be remembered that everybody nowadays is accustomed to the cinematograph, and can assess the necessary detail in a large projection much more rapidly than could the audiences of years ago.

"Pictures I Have Missed."

An American journal is publishing a series of articles on "Pictures I have missed." They are full of poignant revelation and regret. It is invariably the best pictures of all that have been missed. But it occurs to us that a good caption for the series would be Robbie Burns's "Wife we never had."

"The Amateur Photographer" EXPOSURE TABLE—November

EVERY MONTH a brief exposure table will be provided for the assistance of our readers in their practical work. A glance at the current approximate exposures as here given will serve as a reliable guide for most purposes. The subjects will be varied to suit the time of year. The following exposures will serve as a working guide for any fine day during the month, between the hours of 10 in the morning and 2 in the afternoon, with the sun shining, but not necessarily on the subject. Stop used, f/8. The exposure should be doubled if the sun is obscured, or if stop f/11 is used. For f/16 give four times the exposure. For f/5.6 give half. From 8 to 10 a.m. or from 2 to 4 p.m., double these exposures. From 7 to 8 a.m. or from 4 to 5 p.m., treble them.

| SUBJECT. | Ordinary. | Medium. | Rapid. | Extra Rapid. | Ultra Rapid. |
|---|-----------|-----------|-----------|--------------|--------------|
| Open seascapes and cloud studies | 1/20 sec. | 1/30 sec. | 1/60 sec. | 1/80 sec. | 1/100 sec. |
| Open landscapes with no very heavy shadows in foreground, shipping studies or seascapes with rocks, beach scenes .. | 1/10 " | 1/15 " | 1/30 " | 1/40 " | 1/50 " |
| Ordinary landscapes with not too much foliage, open river scenery, figure studies in the open, light buildings, wet street scenes | 1/4 " | 1/6 " | 1/12 " | 1/15 " | 1/20 " |
| Landscapes in fog or mist, or with strong foreground, well-lighted street scenes .. | 1/3 " | 1/4 " | 1/10 " | 1/12 " | 1/15 " |
| Buildings or trees occupying greater portion of pictures | 3/4 " | 1/2 " | 1/4 " | 1/5 " | 1/6 " |
| Portraits or groups taken out of doors, not too much shut in by buildings | 2 secs. | 1½ " | 1 " | 1/2 " | 1/3 " |
| Portraits in well-lighted room, light surroundings, big window, white reflector .. | 6 " | 5 secs. | 3 secs. | 2 secs. | 1½ " |

As a further guide we append a list of some of the best known makes of plates and films on the market. They have been divided into groups, which approximately indicate the speeds referred to above. The hyper-sensitive panchromatic plates and films require less exposure than the ultra-rapid.

| Ultra Rapid. | Hyper-sensitive Pan. | Extra Rapid. | Rapid. |

BROMIDE PRINTS *for Exhibition*

During the winter months the amateur photographer finds himself with less time for outdoor photography and with more for enlarging his best negatives and making prints for exhibitions and competitions, etc. The following notes will be useful to those workers who have not yet acquired the skill and knowledge necessary to the production of a print of good quality.

AN essential requirement of an exhibition print is quality.

However good the pictorial appeal, however good the composition, if these matters are marred by imperfect technique the print has no chance of acceptance in any exhibition of standing.

When printing on bromide paper, there are three items, apart from the fundamental necessity of a good negative, which together control quality, and these are the choice of a suitable grade of paper, the correct exposure of the paper, and its proper development.

These items, being under the control of the individual, provide sources of error and consequent poor quality, although the technique involved is sufficiently simple to be mastered at once by the veriest novice.

The one thing that is fatal to good quality is guess-work, and since there is no occasion for it there is no excuse for it. The use of guess-work goes hand in hand with all sorts of slipshod habits that develop only too quickly if carelessness is not checked from the beginning.

Choice of Paper.

The choice of a suitable grade of paper which will match the tone range of the negative is a matter of the greatest importance, and it is desirable that prints should be, generally speaking, as brilliant as possible without being hard. The grade of paper used should be such that the print is of the greatest contrast that can be obtained without sacrifice of either high-light or shadow detail.

Economy of material can be secured by making use of exposure test pieces so that they will give an indication of the contrast of the print as well as the exposure. This, of course, is achieved by testing through such a portion of the negative as contains both high-light and shadow detail.

In estimating what is a satisfactory degree of contrast in a print, or test piece, it is better to consider the quality of the high-lights and shadows rather than the general appearance, particularly while the paper is still wet.

Exposure.

Most amateurs buy bromide paper for enlarging in packets of six sheets, and each packet contains only two small pieces for test purposes. It will prove an adequate method of dealing with the temptation to dispense with exposure tests, after the two pieces provided have been used, if one of the whole sheets be cut into small pieces.

Every worker should be able to make five good prints from different negatives with one packet of paper; nobody can reasonably hope to make six, and the effort to do so usually means that several sheets of paper are spoilt. It must be realised that there is *no latitude* in bromide paper.

When making the test strips, the exposure given to each successive strip should be doubled so that the series will run, 2, 4, 8, 16 seconds, 5, 10, 20, 40 seconds, and so on. This can only be achieved by progressively covering the test piece for each strip, not by uncovering, a method often advocated. Should it appear that the correct exposure lies between two of the times tested a further test should be made. For instance, if 10 seconds appears to be too short, and 20 seconds too long, tests should be made at 12, 15, and 18 seconds.

Test pieces should always be fixed, rinsed, and the surplus moisture wiped off before being examined, and the examination should be made in a normal white light which fills the room. It is useless to examine the strips by the light from the back of the enlarger or from the dark-room lamp with the screen removed, so that unless a white general light can be switched on, the examination should be made in another room.

Development.

The question of a suitable developer is easily disposed of, since not only are excellent formulæ available for those who prefer to make up their own solutions, but several proprietary ready-mixed developers are on the market, and all may be said to give perfect results. The best developer for any make of paper is usually that printed with the instructions.

Whatever developer is chosen, it should be used at a somewhat stronger degree of concentration than recommended. About 75 per cent of the amount of water called for by the formula or the maker's instructions should be used, and a drop of 10 per cent potassium bromide solution should be added to each ounce of mixed developer.
